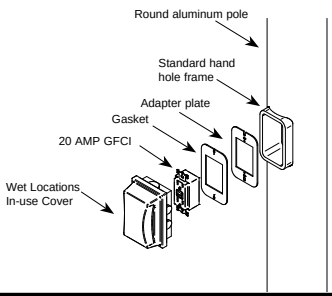
NOTE Factory supplied template must be used when setting anchor bolts. Current will deny any claim for incorrect anchorage placement resulting from failure to use factory supplied template and anchor bolts.

EHH - EXTRA HANDHOLE

C05 - C07 - C20 - COUPLING



VM2 - VIBRATION DAMPER 2ND MODE

Factory installed, internal damper designed to alter pole resonance to reduce movement and material fatigue caused by 2nd mode vibration.

GFI – 20 AMP GFCI RECEPTACLE & COVER

OPTION ORIENTATION

Follow the logic below when ordering location specific options. For each option, include its orientation (in degrees) and its height (in feet). Example: Option C07 should be ordered as: **RSA-B-KENS-F16-40B-TN3-DBT-C05-0-5** (.5" coupling on the handhole/arm side of pole, 15 feet up from the pole base) 1' spacing required between option. Consult factory for other configurations.

VM2SXX - VIBRATION DAMPER 2ND MODE

Field installed, internal damper designed to alter pole resonance to reduce movement and material fatigue caused by 2nd mode vibration.

VM2S08 – 8'
VM2S12 – 12'
VM2S16 – 16'
VM2S20 – 20'
VM2S24 – 24'

For more information about pole vibration and vibration dampers, please consult Pole Vibration Application Guide.

Wind-speed Website disclaimer:
Current has no connection to the linked website and makes no representations as to its accuracy. While the information presented on this third-party website provides a useful starting point for analyzing wind conditions, Current has not verified any of the information on this third party website and assumes no responsibility or liability for its accuracy. The material presented in the windspeed website should not be used or relied upon for any specific application without competent examination and verification of its accuracy, suitability and applicability by engineers or other licensed professionals. Current does not intend that the use of this information replace the sound judgment of such competent professionals, having experience and knowledge in the field of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the results of the windspeed report provided by this website. Users of the information from this third party website assume all liability arising from such use. Use of the output of these referenced websites do not imply approval by the governing building code bodies responsible for building code approval and interpretation for the building site described by latitude/longitude location in the windspeed report. http://windspeed.atcouncil.org

- Allowable EPA, to determine max pole loading weight, multiply allowable EPA by 30 lbs.
- The tables for allowable pole EPA are based on the ASCE 7-05 Wind Map or the Florida Region Wind Map for the 2010 Florida Building Code. The Wind Maps are intended only as a general guide and cannot be used in conjunction with other maps. Always consult local authorities to determine maximum wind velocities, gusting and unique wind conditions for each specific application
- Allowable pole EPA for jobsite wind conditions must be equal to or greater than the total EPA for fixtures, arms, and accessories to be assembled to the pole. Responsibility lies with the specifier for correct pole selection. Installation of poles without luminaires or attachment of any unauthorized accessories to poles is discouraged and shall void the manufacturer's warranty
- Wind speeds and listed EPAs are for ground mounted installations. Poles mounted on structures (such as bridges and buildings) must consider vibration and coefficient of height factors beyond this general guide; Consult local and federal standards
- Wind Induced Vibration brought on by steady, unidirectional winds and other unpredictable aerodynamic forces are not included in wind velocity ratings. Consult Pole Vibration Application Guide for environmental risk factors and design considerations.
- Extreme Wind Events like, Hurricanes, Typhoons, Cyclones, or Tornadoes may expose poles to flying debris, wind shear or other detrimental effects not included in wind velocity ratings

Due to our continued efforts to improve our products, product specifications are subject to change without notice.

Construction: All cast aluminum parts shall be low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal.

EPA (effective projected area): EPA is de¬fined as (projected surface area X drag factor) and measured in ft2. Allowable post, luminaire arm, luminaire and accessory EPAs are derived from the most current published AASHTO (American Association of State Highway and Transportation Officials) standard, currently AASHTO 2001 (50yr design life). Customer assumes all responsibility for selecting the ap¬propriate post for installation (consult factory for assistance). Luminaire arm, luminaire and accessory EPA must be equal to or less than allowable EPA of post. Consult a professional engineer for compliance with local codes and standards.

Fasteners: All fasteners shall be Corrosion Resistant. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost).

Finish: Finish shall be a Beacote V polyester powder-coat electro-statically applied and thermocured. Beacote V finish shall consist of a five stage iron phosphate chemical pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester pow¬der coat finish. The finish shall meet the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pound.

Limited Warranty: Beacon Products warrants its products, to the original purchaser, against defects in materials and workmanship for proper usage for a period of 5 years after date of production, when properly installed, maintained and appropriately specified. See Warranty Information on www.beaconproducts.com for complete details and exclusions.

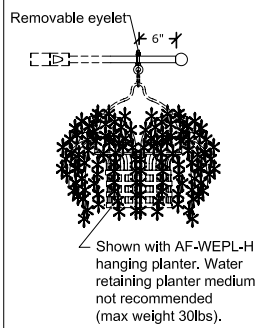
Specifications

Construction:
All cast aluminum parts shall low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal.



Fasteners:
All fasteners shall be stainless steel. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost), consult factory for availability.

Finish:
Finish shall be Beacote III polyester powdercoat electrostatically applied and thermocured. Poles shall be subjected to chemical pre-treatment prior to painting by immersion process.

BLS - Black Gloss Smooth

Construction: All cast aluminum parts shall be low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal. Standard fluted shaft profile shall be 16-flat flutes for 3"OD and 12-flat flutes for 4", 5", & 6"OD.

Base Covers: require specification of smooth or fluted shafts of the size required to meet wind load requirements

Vibration Dampeners: Vibration dampener pads shall be provided when required by customer or deemed necessary by Beacon Products. Please consult factory for bridge mounted applications.

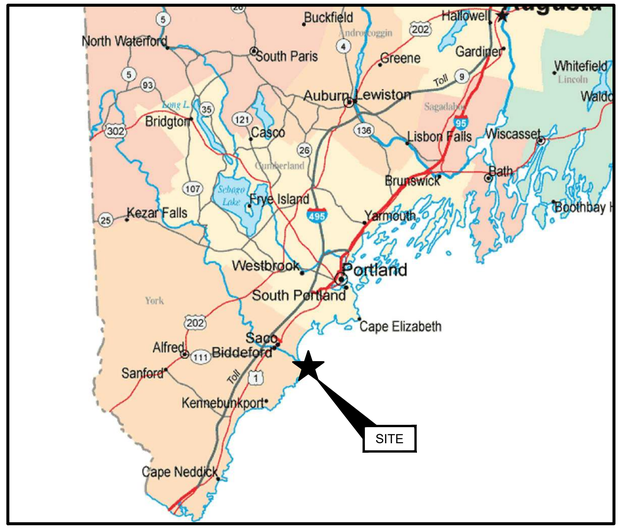
EPA (effective projected area): EPA is defined as (projected surface area X drag factor) and measured in ft2. Allowable post, luminaire arm, luminaire and accessory EPAs are derived from the most current published AASHTO (American Association of State Highway and Transportation Officials) standard, currently AASHTO 2001 (50yr design life). Customer assumes all responsibility for selecting the appropriate post for installation (consult factory for assistance). Luminaire arm, luminaire and accessory EPA must be equal to or less than allowable EPA of post. Consult a professional engineer for compliance with local codes and standards.

Anchor Bolt: Anchor bolts, sized as required, double hex nuts and flat washers shall be hot dipped galvanized steel. A bolt circle template shall be provided for installation.

Fasteners: All fasteners shall be Corrosion Resistant. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost).

Finish: Finish shall be a Beacote V polyester powdercoat electrostatically applied and thermocured. Beacote V finish shall consist of a five stage iron phosphate chemical pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester powder coat finish. The finish shall meet the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pound.

Limited Warranty: Beacon Products warrants its products, to the original purchaser, against defects in materials and workmanship for proper usage for a period of 5 years after date of production, when properly installed, maintained and appropriately specified.



Due to our continued efforts to improve our products, product specifications are subject to change without notice.

DICASTELNUOVO, VINNIE B:\Working\UNIVERSITY OF NEW ENGLAND\2203703 UNE Marine Science Center Pier\00_CAD\Design\Sheets\2203703-G-001.dwg - 6/9/2025

COORDINATION OF WORK:

1. THE CONTRACTOR SHALL SCHEDULE ALL ACTIVITIES SO AS TO LIMIT IMPACT TO MARINE AND LANDSIDE USES.
2. WORK SHALL BE COORDINATED WITH THE OWNER AND THEIR REPRESENTATIVES:

UNE:A:A:A:	ANDREW PHILIPPE	207-602-2365 (OFFICE)	207-400-6166 (CELL)
GEI:A:A:B:	DANIEL BANNON	207-347-2372 (OFFICE)	207-671-2583 (CELL)
SDA:A:A:C:	TOM SAUCIER	207-449-4275	

3. WORK IS SUBJECT TO THE FOLLOWING TIME OF YEAR AND TIMING OF ACTIVITY RESTRICTIONS:
   - TO BE DEFINED UPON PERMIT APPROVAL.
4. CONTRACTOR ACCESS TO THE SITE BY WATER SHALL AT NO TIME IMPACT USE OF THE ADJACENT FEDERAL NAVIGATION CHANNEL.
5. THE OWNER WILL PERMIT THE CONTRACTOR TO HAVE A LAYDOWN AREA ON THE UPLAND PROPERTY FOR USE DURING CONSTRUCTION. AN APPROXIMATE LAYDOWN AREA IS SHOWN ON SHEET C-005. THE FINAL LOCATION AND DIMENSIONS OF THE LAYDOWN AREA SHALL BE APPROVED BY THE OWNER.

SITE ENVIRONMENTAL CONTROLS:

1. ALL WORK SHALL BE PERFORMED IN COMPLIANCE WITH CITY, STATE, AND FEDERAL PERMITS. COPIES OF PERMIT APPROVALS ARE PROVIDED IN THE PROJECT MANUAL.

OSHA REQUIREMENTS:

1. PURSUANT TO 26 M.R.S.A. §565, THE CONTRACTOR SHALL ADHERE TO THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS AS PROMULGATED BY THE FEDERAL OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AT 29-CFR PART 1926 AS MOST RECENTLY AMENDED.

EROSION CONTROL:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
7. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
8. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

SITE PREPARATION:

1. CONTRACTOR SHALL INSTALL ALL SIGNAGE PRIOR TO INITIATION OF CONSTRUCTION ACTIVITIES. INCLUDE OWNER PROJECT SIGNAGE AND FEDERAL AND STATE MANDATED WORK PLACE SIGNAGE.
2. CONTRACTOR SHALL HAVE IN-PLACE TRASH AND SANITARY FACILITIES FOR THE WORK PLACE.
3. DISCOVERY OF INCONSISTENT SITE INFORMATION OR CONDITIONS ARE TO BE IMMEDIATELY CONVEYED TO THE OWNER AND ENGINEER PRIOR TO COMMENCING OR CONTINUING CONSTRUCTION.
4. THE CONTRACTOR SHALL NOTIFY DIG SAFE PRIOR TO COMMENCING ANY WORK.
5. LOCATIONS OF EXISTING UTILITIES SHOWN ARE APPROXIMATE. THE CONTRACTOR SHALL VERIFY LOCATIONS OF UTILITIES AS MAY BE REQUIRED. THE CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES OCCURRING AS A RESULT OF THE CONTRACTOR'S FAILURE TO LOCATE AND PROTECT UNDERGROUND UTILITIES. ALL REPAIRS SHALL BE MADE AT THE CONTRACTOR'S EXPENSE.
6. CONTRACTOR SHALL MAINTAIN AND PROTECT ALL EXISTING UTILITIES AND DRAINAGE AT ALL TIMES. THE CONTRACTOR SHALL REPAIR ANY DAMAGE AND RESTORE TO THE PRE-EXISTING CONDITION AT NO COST TO THE OWNER.
7. CONTRACTOR SHALL PROTECT ALL EXISTING STRUCTURES AND SHALL PERFORM THE WORK IN A MANNER THAT AVOIDS DAMAGE TO EXISTING STRUCTURES. STRUCTURES INCLUDE, BUT ARE NOT LIMITED TO, BUILDINGS, PIERS, BULKHEADS, FLOATS, PIER UTILITIES AND FIXTURES, AND RIPRAP SLOPES. CONTRACTOR SHALL REPAIR ANY DAMAGE AT NO ADDITIONAL COST TO THE CITY.
8. CONTRACTOR SHALL SUPPLY ALL NECESSARY TEMPORARY UTILITIES FOR CONSTRUCTION INCLUDING, BUT NOT LIMITED TO; WATER, POWER, LIGHTING, DATA, AND TELEPHONE.
9. CONTRACTOR SHALL READ AND UNDERSTAND ALL REGULATORY CONDITIONS ASSOCIATED WITH THE PROJECT AND SHALL COMPLY WITH ALL ENVIRONMENTAL REQUIREMENTS AND PERMIT CONDITIONS.
10. CONTRACTOR SHALL PROVIDE A CONFINED CONCRETE TRUCK WASHDOWN AREA AT A LOCATION TO BE APPROVED BY THE ENGINEER. WASHDOWN AREA SHALL INCLUDE PROTECTION TO PAVEMENT, A PERIMETER WALL AND A FILTER FABRIC LINER. NO RUNOFF CONTAINING CEMENT OR OTHER SUSPENDED SOLIDS WILL BE PERMITTED. ALL MATERIALS SHALL BE COMPLETELY REMOVED UPON COMPLETION OF CONSTRUCTION AND DISPOSED OF AT AN APPROVED DISPOSAL LOCATION.

CODES:

1. MAINE DOT STANDARD SPECIFICATIONS, MARCH 2020 ED. WITH SUPPLEMENTAL SPECIFICATIONS THROUGH JUNE 16,2023.
2. MAINE UNIFORM BUILDING AND ENERGY CODE (MUBEC).
3. AMERICAN CONCRETE INSTITUTE (ACI) 318-14: BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE, 2014 ED.
4. CONCRETE REINFORCING STEEL INSTITUTE (CRSI):
5. AMERICAN INSTITUTE FOR STEEL CONSTRUCTION (AISC) STEEL CONSTRUCTION MANUAL, 15TH ED.
6. ALUMINUM ASSOCIATION, ALUMINUM DESIGN MANUAL, 2015 ED.
7. AMERICAN WOOD COUNCIL, NATIONAL DESIGN SPECIFICATIONS (NDS) FOR WOOD CONSTRUCTION, 2015 ED.

SITE CONTROL AND BASELINES:

1. PROJECT BASE PLAN HAS BEEN DEVELOPED FROM A COMPILATION OF MULTIPLE SURVEYS AS DESCRIBED UNDER "SURVEY AND PROPERTY NOTES".
2. ELEVATIONS ARE PROVIDED IN NAVD88 VERTICAL DATUM UNLESS OTHERWISE NOTED.
3. THE CONTRACTOR SHALL INSTALL SURVEY CONTROL AS NECESSARY TO PERFORM THE WORK. PERMANENT SURVEY CONTROL (AT LEAST 2 POINTS) SHALL BE ESTABLISHED FOR THE PROJECT AND PROTECTED FROM DAMAGE DURING CONSTRUCTION AND PROVIDED ON AS-BUILT DRAWINGS.
4. THE CONTRACTOR SHALL ESTABLISH AND MAINTAIN PROJECT BASELINES AND CONTROL AS REQUIRED TO ENSURE ACCURATE LOCATION OF ALL ELEMENTS OF THE PROJECT.

SURVEY AND PROPERTY NOTES:

1. LOCUS PARCEL IS DEPICTED ON CITY OF BIDDEFORD, TAX MAP 52, LOT 4 AND IS LOCATED IN THE INSTITUTIONAL (IN) ZONE. A PORTION OF THE SITE IS LOCATED IN THE LIMITED RESIDENTIAL (LR) SHORELAND OVERLAY DISTRICT.
2. THE RECORD OWNER IS THE UNIVERSITY OF NEW ENGLAND, BY DEED DATED APRIL 18, 1962, RECORDED IN THE YORK COUNTY REGISTRY OF DEEDS IN BOOK 1484, PAGE 0145.
3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM AND CONTROL POINTS PROVIDED BY UNE.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

CONCRETE

1. CAST IN PLACE CONCRETE SHALL CONFORM TO THE FOLLOWING SPECIFICATIONS BASED ON THE MAINE DOT STANDARD SPECIFICATION:

LOCATION	MDOT CLASS	f'c
ALL CONCRETE	CLASS LP	5,000 PSI

2. ALL REINFORCEMENT SHALL BE NEW DEFORMED BARS, GRADE 60 CONFORMING TO ASTM A615, HOT DIP GALVANIZED ACCORDING TO ASTM A767/A767M OR ASTM A1094/A1094M.
3. REINFORCEMENT ACCESSORIES SHALL BE DIELECTRIC COATED STEEL OR APPROVED PLASTIC.
3. GROUT SHALL BE A HIGH STRENGTH, NON-SHRINK GROUT WITH SALT WATER RESISTANCE.
4. CONCRETE COVER SHALL BE A MINIMUM OF 3 INCHES UNLESS NOTED OTHERWISE.
5. ALL EXPOSED EDGES OF CONCRETE AT COLD JOINTS SHALL HAVE A ROUGHENED FINISH AND BE COATED WITH EPOXY BONDING AGENT PRIOR TO CASTING ADJACENT POUR.
6. PROVIDE 1 INCH CHAMFER ON ALL EXPOSED EDGES UNLESS NOTED OR DIRECTED OTHERWISE.
7. TOP SURFACE OF EXPOSED CONCRETE SHALL RECEIVE A BROOM FINISH.
8. COAT FINISHED SURFACES OF CONCRETE WITH A 100% SILANE PENETRATING CONCRETE SEALER SUITABLE FOR USE IN A MARINE ENVIRONMENT. SEALER SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.
9. REINFORCEMENT DEVELOPMENT AND LAP SPLICE LENGTHS SHALL BE IN ACCORDANCE WITH ACI 318.
10. CONCRETE MIX DESIGN SHALL INCLUDE THE USE OF CORROSION INHIBITING ADMIXTURE AT DOSAGE SUITABLE FOR USE IN AN AGGRESSIVE MARINE ENVIRONMENT. CORROSION INHIBITOR SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.

EPOXY ANCHORS

1. ANCHOR ROD, WASHERS, AND NUTS SHALL CONFORM TO ASTM F1554, GRADE 36, AND SHALL BE HOT DIP GALVANIZED.
2. THE MINIMUM EDGE DISTANCE AND MINIMUM SPACING FOR ALL ANCHORS SHALL BE 6 BOLT DIAMETERS.
3. ALL HOLES SHALL BE DRILLED TO THE RECOMMENDED DIAMETER PER MANUFACTURERS REQUIREMENTS USING CARBIDE DRILL BITS MEETING ANSI B212.5-1994.
4. HOLES SHALL BE BRUSHED WITH NYLON BRUSH AND BLOWN CLEAN USING OIL-FREE COMPRESSED AIR A MINIMUM OF TWO TIMES.
5. ALL HOLES SHALL BE FREE OF STANDING WATER BEFORE INSTALLING ANCHORS.
6. EPOXY SHALL HAVE MINIMUM BOND STRENGTH OF 1,600 PSI @ 14 DAYS.

EARTHWORK

1. EARTHWORK MATERIALS SHALL MEET THE FOLLOWING SPECIFICATIONS:

AGGREGATE BASE	TYPE A (MDOT 703.06A)
AGGREGATE SUBBASE	TYPE D (MDOT 703.06C)
WALL BACKFILL	CRUSHED STONE ¾" (MDOT 703.13)
DRAINAGE STONE	CRUSHED STONE 2 INCH (MDOT 703.31)
ORDINARY BORROW	SEE #2 BELOW.

2. ORDINARY BORROW SHALL BE EXISTING GRANULAR SOIL WITH MAXIMUM 4 INCH STONE SUBJECT TO APPROVAL BY THE ENGINEER. ALL DEBRIS OR OTHER DELETERIOUS MATERIALS SHALL BE REMOVED FROM ORDINARY BORROW PRIOR TO REUSE.

STEEL

1. STEEL ANGLE, STRAPS, AND MISCELLANEOUS FABRICATIONS SHALL BE ASTM A36 HOT DIP GALVANIZED AFTER FABRICATION, UNLESS OTHERWISE NOTED.
2. ALL FASTENERS SHALL BE HOT-DIP GALVANIZED OR STAINLESS STEEL.
3. ALL BOLTS SHALL CONFORM TO ASTM A307. MINIMUM SIZE SHALL BE ⅝ INCH UNLESS OTHERWISE NOTED.

HEAVY TIMBER

1. UNLESS OTHERWISE SPECIFIED, ALL TIMBER FRAMING TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NDS 2015.
2. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS UNLESS OTHERWISE NOTED.
3. ALL NEW SOUTHERN YELLOW PINE TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.60 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
4. ALL EXPOSED EDGES SHALL BE PLANED OR SANDED TO PROVIDE SMOOTH SURFACE FREE OF ROUGH EDGES OR DEFECTS.
5. ALL EXPOSED FASTENERS SHALL BE COUNTERSUNK.
6. DOCK WASHERS SHALL BE PROVIDED BENEATH NUT OR BOLT HEAD OF ALL TIMBER BOLTED CONNECTIONS. TIMBER BOLTS SHALL BE CONSIDERED AN ACCEPTABLE ALTERNATIVE TO HEX HEADED BOLTS WITH DOCK WASHERS.
7. STANDARD WASHERS SHALL BE PERMISSIBLE WHERE CONNECTED PARTS INCLUDE STEEL PLATES, ANGLES, BRACKETS, OR BACKER PLATES.

TIMBER PILES

1. TIMBER PILES SHALL BE TROPICAL GREENHEART AND SHALL CONFORM TO ASTM D25.
2. PROVIDE PROTECTION TO PILE TIP AND BUTT TO AVOID DAMAGE DURING DRIVING.
3. PILES SHALL BE ORDERED MINIMUM 5 FT LONGER THAN TABULATED LENGTHS TO ALLOW FOR INSTALLATION VARIABILITY AND CUTOFF.
4. ALL TIMBER PILES SHALL BE DRIVEN TO THE MINIMUM EMBEDMENT OR CAPACITY CRITERIA INDICATED IN THE PILE SCHEDULE. FENDER PILES MAY BE INSTALLED TO THE REQUIRED DEPTH USING A VIBRATORY HAMMER. IN THE EVENT THAT A VIBRATORY HAMMER IS UNABLE TO ACHIEVE THE MINIMUM REQUIRED EMBEDMENT, THE CONTRACTOR WILL BE RESPONSIBLE FOR COMPLETING FINAL SET USING AN IMPACT HAMMER.
5. GREENHEART PILES SHALL BE BANDED WITH 1½ INCH STAINLESS STEEL UTILITY STRAPPING PRIOR TO CUTOFF. REFER TO DETAIL ON SHEET S-009.

ASPHALT

1. PAVING GRADES SHALL PITCH TO EXISTING STRUCTURES.
2. PAVEMENT SHALL CONSIST OF 4" OF HOT MIX ASPHALT PLACED IN TWO COURSES, SEE DETAIL.
3. CONTRACTOR TO SAW CUT PAVEMENT AT LIMIT OF REMOVAL.
4. CONTRACTOR TO PROVIDE SMOOTH TRANSITIONS BETWEEN NEW AND EXISTING ASPHALT.
5. CONTRACTOR TO SEAL JOINT BETWEEN NEW AND EXISTING ASPHALT WITH BITUMINOUS JOINT SEALANT.

GEOTEXTILE

1. GEOTEXTILE SEPARATION FABRIC SHALL BE MIRAFI FW700 OR EQUIVALENT.
2. OVERLAP ALL SEAMS MINIMUM 2 FT.
3. INSTALL PER MANUFACTURERS RECOMMENDATIONS.

STEEL PIPE PILES

1. STEEL PIPE PILES SHALL CONFORM TO ASTM A252, GRADE 3.
2. ALL PILES SHALL BE SEAMLESS.
3. AN OPEN CUTTING SHOE IS REQUIRED.
4. PIPE PILES SHALL BE COATED WITH FUSION BONDED EPOXY, COLOR BROWN. MINIMUM COATING THICKNESS SHALL BE 18-20 MIL. COATING SHALL EXTEND FROM TOP OF PILE DOWN TO MINIMUM 5-FEET BELOW GRADE.
5. DAMAGE TO ANY STEEL COATING SHALL BE TOUCHED UP BY THE CONTRACTOR USING APPROVED MATERIALS AND METHODS.
6. ALL PILES SHALL BE FILLED TO THE TOP WITH CONCRETE AFTER INSTALLATION. ROCK-SOCKETED PILES SHALL BE CLEANED OUT AND FILLED FOR THEIR ENTIRE LENGTH PRIOR TO CONCRETE FILLING. DRIVEN PILES SHALL BE CLEANED OUT TO MINIMUM 10-FEET BELOW ADJACENT MUDLINE.
7. REFER TO PILE SCHEDULE ON SHEET S-005 FOR ESTIMATED PILE LENGTHS, COATING LENGTHS, SIZES, AND SOCKETING REQUIREMENTS.

TIMBER FLOATS

1. FLOAT MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF FLOAT FRAMING AND DRUM LAYOUT TO MEET BOUYANCY, LOADING, AND ENVIRONMENTAL EXPOSURE REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. UNLESS OTHERWISE SPECIFIED, ALL TIMBER TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NFPA NATIONAL DESIGN SPECIFICATION OR THE EQUIVALENT FOR DOUGLAS FIR AS GRADED BY WCLIB AND WWPA.
3. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS.
4. ALL TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.40 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
5. DECKING SHALL BE NO. 1 SOUTHERN PINE, MINIMUM SIZE 2X6.
6. MISC. HARDWARE: GALVANIZED STEEL PLATES AND ALL BOLTS AND RELATED HARDWARE SHALL BE FASHIONED FROM STEEL AND GALVANIZED AFTER FABRICATION AND IN ACCORDANCE WITH REQUIREMENTS OF ASTM A123, AND/OR A153. BOLTS AND NUTS SHALL CONFORM TO ASTM A307.
7. CONNECTION HARDWARE SHALL BE FABRICATED FROM ASTM-A36 GRADE STEEL WITH MINIMUM THICKNESS ¼".
8. PROVIDE GUIDE/WEARING BRACKETS AT GANGWAY LANDING ON FLOAT 'C' PER DETAIL A ON SHEET S-012. BRACKETS SHALL BE LOCATED IN FIELD TO BE CENTERED ON GANGWAY RANGE OF TRAVEL AT MID-TIDE ELEVATION.
9. TRANSITIONS BETWEEN FLOATING DOCKS SHALL INCLUDE ADA COMPLIANT TRANSITION PLATES ACROSS GAPS AT HINGE LOCATIONS.
10. FLOATING DOCKS SHALL MEET THE FOLLOWING LOADING AND FREEBOARD CRITERIA:

DEAD LOAD	20 INCH FREEBOARD
20 PSF UNIFORM LIVE LOAD	MINIMUM 8 INCH FREEBOARD
40 PSF UNIFORM LIVE LOAD	MINIMUM ZERO FREEBOARD

DEAD LOADS SHALL INCLUDE ALL COMPONENTS AND ATTACHMENTS INCLUDING WEIGHT OF ALUMINUM GANGWAY BEARING ON FLOAT 'C'.

ALUMINUM GANGWAY

1. GANGWAY MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF GANGWAY FRAMING AND CONFIGURATION TO MEET STRUCTURAL, PERFORMANCE, AND ACCESSIBILITY REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. GANGWAY SHALL MEET THE FOLLOWING LOADING AND DEFLECTION CRITERIA:
   - DEAD LOAD SHALL CONSIST OF WEIGHT OF THE ENTIRE GANGWAY STRUCTURE PLUS ANY UTILITIES AND ATTACHMENTS.
   - ALLOWABLE STRESSES IN DECK SURFACE, GANGWAY FRAMING, AND MOUNTING COMPONENTS SHALL NOT BE EXCEEDED AT A UNIFORM LIVE LOAD OF 100 PSF.
   - 50 PSF UNIFORM LIVE LOAD MAX. DEFLECTION L/360
   - 100 PSF UNIFORM LIVE LOAD MAX. DEFLECTION NOT TO EXCEED GANGWAY CAMBER
   - ALL HANDRAIL AND POSTS SHALL BE DESIGNED TO WITHSTAND A 200 LB LOAD APPLIED IN ANY DIRECTION OR A 50 LB/FT LOAD APPLIED ALONG THE HANDRAIL LENGTH.
3. GANGWAY HINGES SHALL BE CAPABLE OF TRAVELING FREELY AND WITHOUT BINDING THROUGH THE ENTIRE RANGE OF WATER LEVELS FROM MLLW TO BASE FLOOD ELEVATION PLUS TWO-FEET OF ADDITIONAL ELEVATION IN EITHER DIRECTION.

REMARKS

1 - 4" casing installed to 20.0' below mudline (bml), then wash ahead to 51.0' bml.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

SURVEY AND PROPERTY NOTES:

1. LOCUS PARCEL IS DEPICTED ON CITY OF BIDDEFORD, TAX MAP 52, LOT 4 AND IS LOCATED IN THE INSTITUTIONAL (IN) ZONE. A PORTION OF THE SITE IS LOCATED IN THE LIMITED RESIDENTIAL (LR) SHORELAND OVERLAY DISTRICT.
2. THE RECORD OWNER IS THE UNIVERSITY OF NEW ENGLAND, BY DEED DATED APRIL 18, 1962, RECORDED IN THE YORK COUNTY REGISTRY OF DEEDS IN BOOK 1484, PAGE 0145.
3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

NOTES:
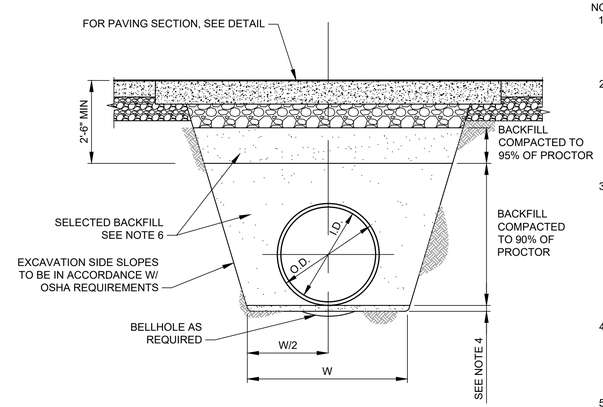
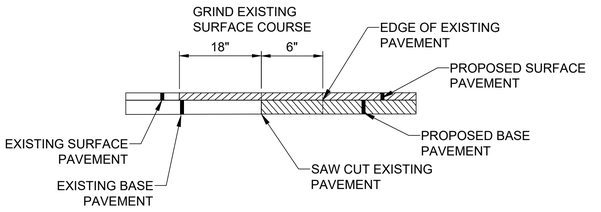
1. PAVEMENT DESIGN SHALL HAVE A MAINEDOT APPROVED JOB MIX FORMULA (JMF) WITHIN THE LATEST CALENDAR YEAR UNLESS OTHERWISE APPROVED BY OWNER.



1 HMA TRAVELWAY/SHOULDER TYPICAL SECTION

NO SCALE

PLUNGE POOL SIZING (minimum)				
SIZE	RIPRAP SIZING (D_{50})	WIDTH At the narrow end of pipe	LENGTH For slow flows (no pressure head)	LENGTH For high flows (with pressure head)
12"	5"	3-4'	4-6'	8-10'
18"	8"	4-6'	6-8'	12-18'
24"	10"	6-8'	8-10'	18-22'
30"	12"	8-10'	12-14'	22-28'
36"	14"	10-12'	14-16'	28-32'

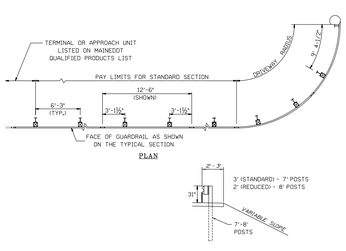


The diameter of the largest stone size in the mix should be about 1.5 times the D_{50} and the smallest one about one half the size. The thickness of riprap should never be less than 2 times the rock D_{50}.

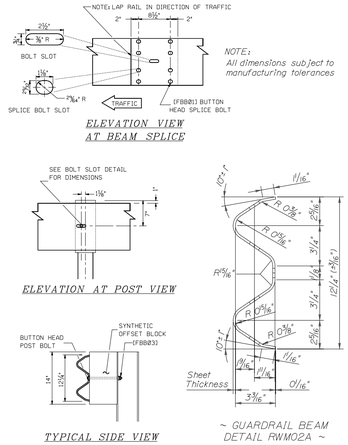
NOTES:
1. TRENCH BOTTOM OR BEDDING FOR ALL PIPE SHALL BE GRADED TO PROVIDE UNIFORM SUPPORT FOR THE ENTIRE LENGTH OF THE PIPE EXCEPT AT BELLHOLES.
2. BELLHOLES FOR PIPES SHALL HAVE A CLEARANCE OF 3" BETWEEN THE BOTTOM OF THE BELLHOLE AND THE EXTERIOR OF THE PIPE BARREL, BUT IN NO CASE SHALL BELLHOLES BE SMALLER THAN REQUIRED TO FACILITATE PLACING OF THE PIPE OR PROPER JOINING OF THE PIPE.
3. COMPACTION BACKFILL SHALL BE COMPACTED TO A DEGREE AT LEAST EQUIVALENT TO THE EXISTING DEGREE OF COMPACTING OF ADJACENT IN-PLACE EARTH MATERIALS AGAINST WHICH SUCH COMPACTED BACKFILL IS TO BE PLACED, OR TO A MIN OF 95% OF THE LABORATORY STANDARD MAX ASTM D698 DENSITY, WHICHEVER IS GREATER.
4. MIN 3" DEEP LAYER OF SCARIFIED MATERIAL WHEN IN HARD MATERIAL. IN UNSUITABLE MATERIAL, OVER EXCAVATE AS DIRECTED BY ENGINEER (6" MIN) AND REPLACE WITH COMPACTED BACKFILL.
5. W = PIPE O.D. + 24" MIN
6. ALL SELECTED BACKFILL IS TO BE IN CONFORMANCE WITH STATE STANDARD SPECIFICATION.

3 TRENCH

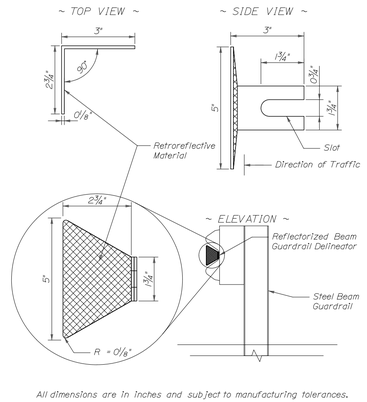
NO SCALE



4 HMA PAVEMENT BUTT JOINT



NO SCALE



NOTES:
1. IF THE PIPE DISCHARGES ONTO A FLAT AREA, THE APRON SHOULD HAVE A WIDTH THAT IS THREE TIMES THE OUTLET PIPE'S DIAMETER. IF THE PIPE FLOWS HAVE THE POTENTIAL OF CAUSING A GULLY, A LEVEL SPREADER SHOULD BE PROVIDED.
2. THE CHANNEL SIDE SLOPES SHOULD BE NO STEEPER THAN 2:1. RIPRAP ON THE SIDES OF THE PLUNGE POOL SHOULD EXTEND TO THE TOP OF THE CHANNEL.
3. THE PLUNGE POOL SIZING AND THE MEDIAN SIZED RIPRAP CAN BE DETERMINED FROM THE FOLLOWING TABLE. THE THICKNESS OF RIPRAP SHOULD NOT BE LESS THAN 2 TIMES THE ROCK D50.
4. A GEOTEXTILE OR APPROPRIATE GRAVEL FILTER SHOULD BE USED TO PROTECT AGAINST PIPING OF SOIL FINES FROM BENEATH THE ROCK.
5. IN A CHANNEL THAT CAN BE REVEGETATED, SEED AND MULCH SHOULD BE APPLIED WITHIN 7 DAYS FROM FINAL CONSTRUCTION..

EROSION AND SEDIMENTATION CONTROL NOTES:

INTRODUCTION

THE FOLLOWING PLAN FOR CONTROLLING SEDIMENTATION AND EROSION IN THIS PROJECT IS BASED ON CONSERVATION PRACTICES FOUND IN THE MAINE EROSION & SEDIMENT CONTROL BMPS MANUAL, OCTOBER 2016, AND MAINE EROSION AND SEDIMENT CONTROL PRACTICE FIELD GUIDE FOR CONTRACTORS, REVISED 2014, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION. THE CONTRACTOR WHO IMPLEMENTS THIS PLAN SHALL BE FAMILIAR WITH THESE PUBLICATIONS AND ADHERE TO THEM AND THE PRACTICES PRESENTED HEREIN REFERENCE IS MADE TO THE EROSION CONTROL PLANS AND DETAILS (C-005 AND C-013) WITHIN THE PLAN SET, SHOWING THE LOCATIONS AND TYPES OF PROPOSED MEASURES TO BE IMPLEMENTED.

GENERAL EROSION AND SEDIMENTATION CONTROL NOTES:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
7. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
8. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

GENERAL EROSION AND SEDIMENTATION CONTROL PRACTICES

THE FOLLOWING IS A LIST OF GENERAL EROSION CONTROL PRACTICES THAT WILL BE USED TO PREVENT EROSION AND SEDIMENTATION BEFORE, DURING AND AFTER THE CONSTRUCTION OF THIS PROJECT. IN ADDITION, SPECIAL CARE SHALL BE USED AT ALL TIMES TO:

LIMIT DISTURBANCE AND, HENCE, EROSION

1. CORRECT ANY EROSION PROBLEMS IMMEDIATELY.
2. REGULARLY MONITOR THE IMPLEMENTED PRACTICES, ESPECIALLY AFTER EVERY RAINFALL.
3. REVEGETATE DISTURBED AREAS AS SOON AS POSSIBLE AFTER CONSTRUCTION.
4. CONFORM TO ALL REQUIREMENTS/STANDARDS OF THE SITE'S MAINE DEP EROSION & SEDIMENT CONTROL BMP MANUAL.

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS WILL BE INSTALLED ALONG THE DOWN GRADIENT SIDE OF THE PROPOSED GROUND DISTURBANCE AREAS PRIOR TO ANY CONSTRUCTION ACTIVITIES WHERE SLOPES EXCEED 8% OR THERE IS FLOWING WATER BOTH SILT FENCE AND EROSION CONTROL MATTING BERMS SHALL BE USED.

CATCH BASIN PROTECTION

CATCH BASIN PROTECTION WILL BE INSTALLED AT THE FIRST DOWNGRADIENT CATCH BASIN IN STREET ADJACENT TO ANY CONSTRUCTION ACTIVITIES AND IN ALL ONSITE CATCH BASINS UNTIL SITE HAS BEEN COMPLETELY STABILIZED.

CONSTRUCTION PHASE

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION DURING CONSTRUCTION ON THIS PROJECT:

1. EROSION AND SEDIMENTATION CONTROL BMPS SHALL BE INTALLED PRIOR TO THE COMMENCEMENT OF EARTHWORK ACTIVITIES.
2. ONLY THOSE AREAS UNDER ACTIVE CONSTRUCTION WILL BE CLEARED AND LEFT IN AN UNTREATED OR UNVEGETATED CONDITION. AN AREA NO LARGER THAN WHAT CAN BE MULCHED IN ONE DAY MAY BE OPEN AT ONCE. ONCE CONSTRUCTION OF AN AREA IS COMPLETE, FINAL GRADING, LOAMING AND SEEDING SHALL OCCUR IMMEDIATELY (REFER TO "POST CONSTRUCTION REVEGETATION" SECTION). IF DURING FINAL GRADING, LOAMING AND SEEDING CAN NOT OCCUR IMMEDIATELY, IT SHALL BE DONE PRIOR TO ANY STORM EVENT AND WITHIN 15 DAYS OF COMPLETING CONSTRUCTION IN THE AREA. IF FINAL GRADING, LOAMING AND SEEDING CANNOT OCCUR WITHIN 7 DAYS, OR IF THE AREA IS NOT UNDER ACTIVE CONSTRUCTION FOR A PERIOD LONGER THAN 7 DAYS, SEE ITEM NO. 4 BELOW.
3. PRIOR TO THE START OF CONSTRUCTION IN A SPECIFIC AREA, SILT FENCING SHALL BE INSTALLED ON DOWNGRADIENT PORTIONS OF THE SITE AS LOCATED ON THE PLANS TO PROTECT AGAINST ANY CONSTRUCTION RELATED EROSION.
4. TOPSOIL WILL BE STOCKPILED WHEN NECESSARY IN AREAS WHICH HAVE MINIMUM POTENTIAL FOR EROSION AND WILL BE KEPT AS FAR AS POSSIBLE FROM EXISTING DRAINAGE AREAS AND WETLANDS. ALL STOCKPILES EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH ANCHORED MULCH (WITHIN 5 DAYS OF THE LAST DEPOSIT OF STOCKPILED SOIL).
   B. SEEDED WITH CONSERVATION MIX AND MULCHED IMMEDIATELY.
   C. STOCKPILES SHALL BE EITHER PLACED UPHILL OF AN EXISTING SEDIMENT BARRIER ON THE SITE OR ENCIRCLED BY A HAY BALE OR SILT FENCE BARRIER THE FIRST DAY THAT STOCKPILING COMMENCES.
5. ALL DISTURBED AREAS EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH STRAW AT A RATE OF 70-90 LBS. PER 1000 SQUARE FEET FROM 4/16 TO 10/1, OR AT A RATE OF 150-200 LBS. PER 1000 SQUARE FEET FROM 10/1 TO 4/15.
   B. SEEDED WITH CONSERVATION MIX OF PERENNIAL RYE GRASS (1.0 LBS/1000 SQ.FT.) AND MULCHED IMMEDIATELY. FROM 10/1 TO 4/15, FOLLOW THE SEEDING RATES AS OUTLINED BELOW IN SUB-SECTION 4.D. OF THE "POST CONSTRUCTION REVEGETATION" SECTION.
   C. MONITORED EVERY TWO WEEKS UNTIL SEEDING CAN OCCUR AND REMULCHED AS NEEDED TO PROTECT SLOPES.
6. ALL GRADING WILL BE HELD TO A MAXIMUM 3:1 SLOPE WHERE PRACTICAL. GREATER SLOPES MAY BE USED WHERE THE BANKS ARE PROTECTED WITH SOFT ARMOUR MATTING, EROSION CONTROL MATTING, OR RIPRAP. ALL SLOPES WILL BE STABILIZED WITH PERMANENT SEEDING IMMEDIATELY AFTER FINAL GRADING IS COMPLETE. (IT IS UNDERSTOOD THAT IMMEDIATELY MEANS WITHIN 5 DAYS OF THE COMPLETION OF WORK. SEE POST-CONSTRUCTION REVEGETATION FOR SEEDING SPECIFICATION).
7. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
8. CONSTRUCTION TRAFFIC WILL BE DIRECTED OVER THE EXISTING SITE ENTRANCE. THE ROAD SHALL BE SWEPT AND VACUUMED DAILY SHOULD SEDIMENT BE TRACKED ONTO IT.
9. ALL AREAS DRAINING TO A STORMWATER FILTER OR BMP SHALL BE STABILIZED PRIOR TO CONSTRUCTION OF FILTER MEDIA TO PREVENT SEDIMENT FROM CLOGGING MEDIA.

DEWATERING

1. ALL DEWATERING DISCHARGE LOCATIONS SHALL BE LOCATED ON RELATIVELY FLAT GROUND AT LEAST 75' FROM STREAMS AND 25' FROM WETLANDS. THE CONTRACTOR SHALL UTILIZE DIRTBAGS, EROSION CONTROL MIX BERMS, OR SIMILAR METHODS FOR FILTRATION OF DEWATERING AND SHALL CONFORM TO THE MAINE EROSION AND SEDIMENT CONTROL BMPS G-1, G-2, AND G-3.

POST CONSTRUCTION REVEGETATION

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION AS SOON AS AN AREA IS READY TO UNDERGO FINAL GRADING:

1. A MINIMUM OF 6" OF LOAM WILL BE SPREAD OVER DISTURBED AREAS AND GRADED TO A UNIFORM DEPTH AND NATURAL APPEARANCE.
2. LAWN AREAS: "PARK MIX" GRASS SEED BY ALLEN, STERLING & LOTHROP (FALMOUTH, MAINE), OR APPROVED EQUAL.
3. MULCH SHALL BE HAY OR STRAW MULCHES THAT ARE DRY AND FREE FROM UNDESIRABLE SEEDS AND COURSE MATERIALS.
   A. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE.
   B. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
   C. BLANKET WITH TACKED PHOTODEGRADABLE/BIODEGRADABLE NETTING ON GRADES GREATER THAN 5%.
4. HYDRO-MULCH SHALL CONSIST OF A MIXTURE OF ASPHALT, WOOD FIBRE OR PAPER FIBRE AND WATER, WHICH IS SPRAYED OVER A SEEDED AREA. HYDRO-MULCH SHALL NOT BE USED BETWEEN 10/1 AND 4/15.
5. CONSTRUCTION SHALL BE PLANNED TO ELIMINATE THE NEED FOR SEEDING BETWEEN OCTOBER 1ST AND APRIL 15TH. SHOULD SEEDING BE NECESSARY BETWEEN THESE DATES, THE FOLLOWING PROCEDURE SHALL BE FOLLOWED:
   A. ONLY UNFROZEN LOAM SHALL BE USED.
   B. LOAMING, SEEDING AND MULCHING WILL NOT BE DONE OVER SNOW OR ICE COVER. IF SNOW EXISTS, IT MUST BE REMOVED PRIOR TO PLACEMENT OF SEED.
   C. WHERE PERMANENT SEEDING IS NECESSARY, ANNUAL WINTER RYE (1.2 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   D. WHERE TEMPORARY SEEDING IS REQUIRED, ANNUAL WINTER RYE (2.5 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   E. FERTILIZING, SEEDING AND MULCHING SHALL BE DONE ON LOAM THE DAY THE LOAM IS SPREAD.
   F. HAY MULCH SHALL BE SECURED WITH PHOTODEGRADABLE/BIODEGRADABLE NETTING. TRACKING BY MACHINERY ALONE WILL NOT SUFFICE. WINTER MULCHING RATES, SHALL BE DOUBLE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION, SHOULD BE APPLIED DURING THIS PERIOD.
6. FOLLOWING FINAL SEEDING, THE SITE WILL BE INSPECTED EVERY 30 DAYS UNTIL 90% COVER HAS BEEN ESTABLISHED. RESEEDING WILL BE CARRIED OUT BY THE CONTRACTOR WITHIN 10 DAYS OF NOTIFICATION BY THE DESIGN PROFESSIONAL THAT THE EXISTING CATCH IS INADEQUATE.

MONITORING SCHEDULE

THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING, MONITORING, MAINTAINING, REPAIRING, REPLACING AND REMOVING ALL OF THE EROSION AND SEDIMENTATION CONTROLS OR APPOINTING A QUALIFIED SUBCONTRACTOR TO DO SO. MAINTENANCE MEASURES WILL BE APPLIED AS NEEDED DURING THE ENTIRE CONSTRUCTION CYCLE. IMMEDIATELY FOLLOWING ANY SIGNIFICANT RAINFALL, AND AT LEAST ONCE A WEEK, A VISUAL INSPECTION WILL BE MADE OF ALL EROSION AND SEDIMENTATION CONTROLS AS FOLLOWS:

1. SILT FENCE SHALL BE INSPECTED AND REPAIRED. SEDIMENT TRAPPED BEHIND THESE BARRIERS SHALL BE EXCAVATED WHEN IT REACHES A DEPTH OF 6" AND REDISTRIBUTED TO AREAS UNDERGOING FINAL GRADING.
2. CONSTRUCTION ENTRANCE SHALL BE VISUALLY INSPECTED AND REPAIRED AS NEEDED. ANY AREAS SUBJECT TO RUTTING SHALL BE STABILIZED IMMEDIATELY. IF THE VOIDS OF THE CONSTRUCTION ENTRANCE BECOME FILLED WITH MUD, MORE CRUSHED STONE SHALL BE ADDED AS NEEDED. THE PUBLIC ROADWAY SHALL BE SWEPT AND VACUUMED SHOULD MUD BE DEPOSITED/TRACKED ONTO THEM.

STANDARDS FOR STABILIZING SITES FOR THE WINTER

THE FOLLOWING STANDARDS AND METHODOLOGIES SHALL BE USED FOR STABILIZING THE SITE DURING THE WINTER CONSTRUCTION PERIOD:

1. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SLOPES (ANY AREA HAVING A GRADE GREATER THAN 25%) - THE CONTRACTOR WILL SEED AND MULCH ALL SLOPES TO BE VEGETATED BY SEPTEMBER 15TH. IF THE CONTRACTOR FAILS TO STABILIZE ANY SLOPE TO BE VEGETATED BY SEPTEMBER 15TH, THEN THE CONTRACTOR WILL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE SLOPE FOR LATE FALL AND WINTER.
   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION AND EROSION CONTROL MATS: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SLOPE WITH WINTER RYE AT A RATE OF 3 POUNDS PER 1000 SQUARE FEET AND THEN INSTALL EROSION CONTROL MATS OR ANCHORED HAY MULCH OVER THE SEEDING AT TWICE THE RATE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS.
   B. STABILIZE THE SLOPE WITH WOOD-WASTE COMPOST: THE CONTRACTOR WILL PLACE A SIX-INCH LAYER OF WOOD-WASTE COMPOST ON THE SLOPE BY NOVEMBER 15TH. THE CONTRACTOR WILL NOT USE WOOD-WASTE COMPOST TO STABILIZE SLOPES HAVING GRADES GREATER THAN 50% (2H:IV) OR HAVING GROUNDWATER SEEPS ON THE SLOPE FACE.
   C. STABILIZE THE SLOPE WITH STONE RIPRAP: THE CONTRACTOR WILL PLACE A LAYER OF STONE RIPRAP ON THE SLOPE BY NOVEMBER 15TH. THE DEVELOPMENT'S OWNER WILL HIRE A REGISTERED PROFESSIONAL ENGINEER TO DETERMINE THE STONE SIZE NEEDED FOR STABILITY ON THE SLOPE AND TO DESIGN A FILTER LAYER FOR UNDERNEATH THE RIPRAP.

STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SOILS - BY SEPTEMBER 15TH THE CONTRACTOR WILL SEED AND MULCH ALL DISTURBED SOILS ON THE SITE. IF THE CONTRACTOR FAILS TO STABILIZE THESE SOILS BY THIS DATE, THEN THE CONTRACTOR WILL TAKE ON OF THE FOLLOWING ACTIONS TO STABILIZE THE SOIL FOR LATE FALL AND WINTER.

   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SOIL WITH WINTER RYE AT A SEEDING RATE OF 3 POUNDS PER 1000 SQUARE FEET, LIGHTLY MULCH THE SEEDED SOIL WITH HAY OR STRAW AT 75 POUNDS PER 1000 SQUARE FEET, AND ANCHOR THE MULCH WITH PLASTIC NETTING. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS. IF THE RYE FAILS TO GROW AT LEAST THREE INCHES OR FAILS TO COVER AT LEAST 75% OF THE DISTURBED SOIL BEFORE NOVEMBER, 1, THEN THE CONTRACTOR WILL MULCH THE AREA FOR OVER-WINTER PROTECTION AS DESCRIBED IN ITEM III OF THIS STANDARD.
   B. STABILIZE THE SOIL WITH SOD: THE CONTRACTOR WILL STABILIZE THE DISTURBED SOIL WITH PROPERLY INSTALLED SOD BY OCTOBER 1ST. PROPER INSTALLATION INCLUDES THE CONTRACTOR PINNING THE SOD ONTO THE SOIL WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, AND WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL.
   C. STABILIZE THE SOIL WITH MULCH: BY NOVEMBER 15TH THE CONTRACTOR WILL MULCH THE DISTURBED SOIL BY SPREADING HAY OR STRAW AT A RATE OF AT LEAST 150 POUNDS PER 1000 SQUARE FEET ON THE AREA SO THAT NO SOIL IS VISIBLE THROUGH THE MULCH. IMMEDIATELY AFTER APPLYING THE MULCH, THE CONTRACTOR WILL ANCHOR THE MULCH WITH NETTING OR OTHER METHOD TO PREVENT WIND FROM MOVING THE MULCH OFF THE DISTURBED SOIL.

EROSION CONTROL REMOVAL

AN AREA IS CONSIDERED STABLE IF IT IS PAVED OR IF 90% GROWTH OF PLANTED SEEDS IS ESTABLISHED. ONCE AN AREA IS CONSIDERED STABLE, THE EROSION CONTROL MEASURES CAN BE REMOVED AS FOLLOWS:

1. SILT FENCE: SILT FENCE SHALL BE DISPOSED OF LEGALLY AND PROPERLY OFF-SITE. ALL SEDIMENT TRAPPED BEHIND THESE CONTROLS SHALL BE DISTRIBUTED TO AN AREA UNDERGOING FINAL GRADING OR REMOVED AND RELOCATED OFF-SITE.
2. STABILIZED CONSTRUCTION ENTRANCE: THE STABILIZED CONSTRUCTION ENTRANCE SHALL BE REMOVED ONCE THE COMPACTED ROADWAY BASE IN IN PLACE. STONE AND SEDIMENT FROM THE CONSTRUCTION ENTRANCE SHALL BE REDISTRIBUTED TO AN AREA UNDERGOING GRADING OR REMOVED AND RELOCATED OFFSITE.
3. MISCELLANEOUS: ONCE ALL THE TRAPPED SEDIMENTS HAVE BEEN REMOVED FROM THE TEMPORARY SEDIMENTATION DEVICES THE DISTURBED AREAS MUST BE REGRADED IN AN AESTHETIC MANNER TO CONFORM TO THE SURROUNDING TOPOGRAPHY. ONCE GRADED THESE DISTURBED AREAS MUST BE LOAMED (IF NECESSARY), FERTILIZED, SEEDED AND MULCHED IN ACCORDANCE WITH THE RATES PREVIOUSLY STATED.

THE ABOVE EROSION CONTROLS MUST BE REMOVED WITHIN 30 DAYS OF FINAL STABILIZATION OF THE SITE. CONFORMANCE WITH THIS PLAN AND FOLLOWING THESE PRACTICES WILL RESULT IN A PROJECT THAT COMPLIES WITH THE STATE REGULATIONS AND THE STANDARDS OF THE NATURAL RESOURCES PROTECTION ACT, AND WILL PROTECT WATER QUALITY IN AREAS DOWNSTREAM ROM THE PROJECT.

MAINE CONSTRUCTION GENERAL PERMIT REQUIRED

SUBMISSION OF A MAINE CONSTRUCTION GENERAL PERMIT (MCGP) IS REQUIRED PRIOR TO COMMENCEMENT OF ANY EXCAVATION ACTIVITIES.

INSPECTION AND MAINTENANCE (APPENDIX B)

1. INSPECTION AND MAINTENANCE REQUIREMENTS: INSPECT DISTURBED AND IMPERVIOUS AREAS, EROSION AND STORMWATER CONTROL MEASURES, AREAS USED FOR STORAGE THAT ARE EXPOSED TO PRECIPITATION, AND LOCATIONS WHERE VEHICLES ENTER OR EXIT THE SITE. INSPECT THESE AREAS AT LEAST ONCE A WEEK AS WELL AS BEFORE AND AFTER A SIGNIFICANT STORM EVENT (0.5 INCHES OF RAINFALL IN A 24-HOUR PERIOD) AND PRIOR TO COMPLETION OF PERMANENT STABILIZATION MEASURES. A PERSON WITH KNOWLEDGE OF EROSION AND STORMWATER CONTROL, INCLUDING THE STANDARDS IN THE MCGP AND ANY DEPARTMENTAL COMPANION DOCUMENT TO THE MCGP, MUST CONDUCT THE INSPECTION. THIS PERSON MUST BE IDENTIFIED IN THE INSPECTION LOG. IF BEST MANAGEMENT PRACTICES (BMPS) NEED TO BE MODIFIED OR IF ADDITIONAL BMPS ARE NECESSARY, IMPLEMENTATION MUST BE STARTED BY THE END OF THE NEXT WORKIN DAY AND COMPLETED WITHIN 7 CALENDAR DAYS AND PRIOR TO ANY STORM EVENT (RAINFALL). ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS AREA PERMANENTLY STABILIZED. DOCUMENTATION OF CORRECTION ACTIONS SHALL BE MAINTAINED WITH THE INSPECTION FORMS.
2. INSPECTION LOG (REPORT): A LOG (REPORT) MUST BE KEPT SUMMARIZING THE SCOPE OF THE INSPECTION, NAME(S) AND QUALIFICATIONS OF THE PERSONNEL MAKING THE INSPECTION, THE DATE(S) OF THE INSPECTION, AND MAJOR OBSERVATIONS RELATING TO OPERATION OF EROSION AND SEDIMENTATION CONTROLS AND POLLUTION PREVENTION MEASURES. MAJOR OBSERVATIONS MUST INCLUDE BMPS THAT NEED MAINTENANCE, BMPS THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATIONS(S) WHERE ADDITIONAL BMPS ARE NEEDED. FOR EACH BMP REQUIRING MAINTENANCE, BMP NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL BMPS, NOTE IN THE INSPECTION LOG THE CORRECT ACTION TAKEN AND WHEN IT WAS TAKEN. THE LOG MUST BE MADE ACCESSIBLE TO THE DEPARTMENT STAFF AND A COPY MUST BE PROVIDED UPON REQUEST. THE PERMITTEE SHALL RETAIN A COPY OF THE LOG FOR A PERIOD OF AT LEAST THREE YEARS FROM THE COMPLETION OF THE PERMANENT STABILIZATION.

HOUSEKEEPING (APPENDIX C)

1. SPILL PREVENTION: CONTROLS MUST BE USED TO PREVENT POLLUTANTS FROM CONSTRUCTION AND WASTE MATERIALS STORED ON SITE TO ENTER STORMWATER, WHICH INCLUDES STORAGE PRACTICES TO MINIMIZE EXPOSURE OF THE MATERIALS TO STORMWATER. THE SITE CONTRACTOR OR OPERATOR MUST DEVELOP, AND IMPLEMENT AS NECESSARY, APPROPRIATE SPILL PREVENTION, CONTAINMENT, AND RESPONSE PLANNING MEASURES.

NOTE: ANY SPILL OR RELEASE OF TOXIC OR HAZARDOUS SUBSTANCES MUST BE REPORTED TO THE DEPARTMENT. FOR OIL SPILLS, CALL 1-800-482-0777 WHICH IS AVAILABLE 24 HOURS A DAY. FOR SPILLS OF TOXIC OR HAZARDOUS MATERIAL, CALL 1-800-452-4664 WHICH IS AVAILABLE 24 HOURS A DAY. FOR MORE INFORMATION, VISIT THE DEPARTMENT'S WEBSITE AT: HTTP://WWW.MAINE.GOV/DEP/SPILLS/EMERGSPILLRESP/

2. GROUNDWATER PROTECTION: DURING CONSTRUCTION, LIQUID PETROLEUM PRODUCTS AND OTHER HAZARDOUS MATERIALS WITH THE POTENTIAL TO CONTAMINATE GROUNDWATER MAY NOT BE STORED OR HANDLED IN AREAS OF THE SITE DRAINING TO AN INFILTRATION AREA. AN "INFILTRATION AREA" IS ANY AREA OF THE SITE THAT BY DESIGN OR AS A RESULT OF SOILS, TOPOGRAPHY AND OTHER RELEVANT FACTORS ACCUMULATES RUNOFF THAT INFILTRATES INTO THE SOIL. DIKES, BERMS, SUMPS, AND OTHER FORMS OF SECONDARY CONTAINMENT THAT PREVENT DISCHARGE TO GROUNDWATER MAY BE USED TO ISOLATE PORTIONS OF THE SITE FOR THE PURPOSES OF STORAGE AND HANDLING OF THESE MATERIALS. ANY PROJECT PROPOSING INFILTRATION OF STORMWATER MUST PROVIDE ADEQUATE PRE-TREATMENT OF STORMWATER PRIOR TO DISCHARGE OF STORMWATER TO THE INFILTRATION AREA, OR PROVIDE FOR TREATMENT WITHIN THE INFILTRATION AREA, IN ORDER TO PREVENT THE ACCUMULATION OF FINES, REDUCTION IN INFILTRATION RATE, AND CONSEQUENT FLOODING AND DESTABILIZATION.

NOTE: LACK OF APPROPRIATE POLLUTANT REMOVAL BEST MANAGEMENT PRACTICES (BMPS) MAY RESULT IN VIOLATIONS OF THE GROUNDWATER QUALITY STANDARD ESTABLISHED BY 38 M.R.S.A. §465-C(1).

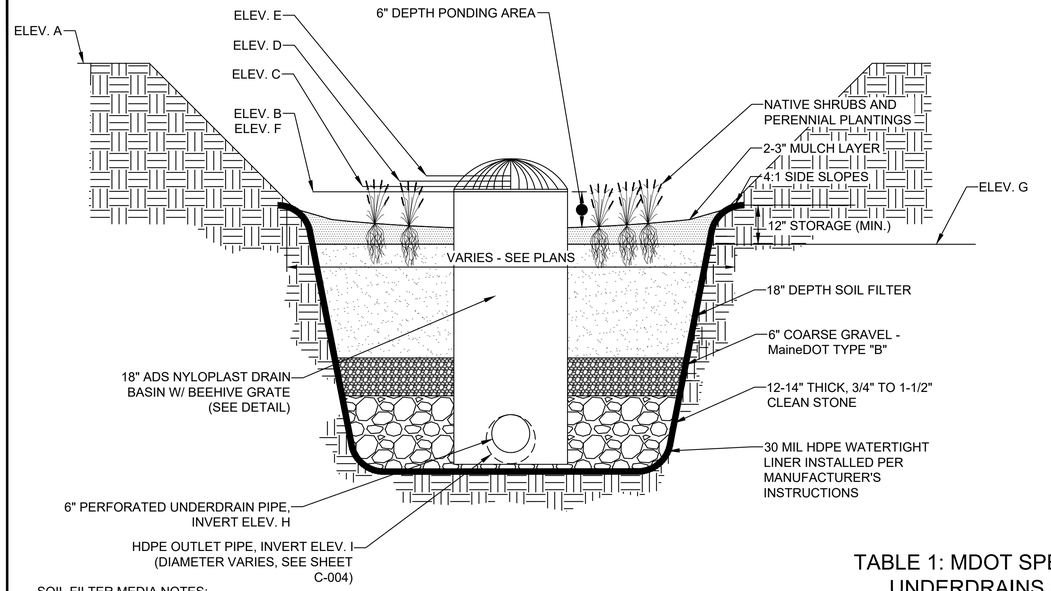
3. FUGITIVE SEDIMENT AND DUST: ACTIONS MUST BE TAKEN TO ENSURE THAT ACTIVITIES DO NOT RESULT IN NOTICEABLE EROSION OF SOILS OR FUGITIVE DUST EMISSIONS DURING OR AFTER CONSTRUCTION. OIL MAY NOT BE USED FOR DUST CONTROL, BUT OTHER WATER ADDITIVES MAY BE CONSIDERED AS NEEDED. A STABILIZED CONSTRUCTION ENTRANCE (SCE) SHOULD BE INCLUDED TO MINIMIZE TRACKING OF MUD AND SEDIMENT. IF OFF-SITE TRACKING OCCURS, PUBLIC ROADS SHOULD BE SWEPT IMMEDIATELY AND NO LESS THAN ONCE A WEEK AND PRIOR TO SIGNIFICANT STORM EVENTS. OPERATIONS DURING DRY MONTHS, THAT EXPERIENCE FUGITIVE DUST PROBLEMS, SHOULD WET DOWN UNPAVED ACCESS ROADS ONCE A WEEK OR MORE FREQUENTLY AS NEEDED WITH A WATER ADDITIVE TO SUPPRESS FUGITIVE SEDIMENT AND DUST.

NOTE: DEWATERING A STREAM WITHOUT A PERMIT FROM THE DEPARTMENT MAY VIOLATE STATE WATER QUALITY STANDARDS AND THE NATURAL RESOURCES PROTECTION ACT.

4. DEBRIS AND OTHER MATERIALS: MINIMIZE THE EXPOSURE OF CONSTRUCTION DEBRIS, BUILDING AND LANDSCAPING MATERIALS, TRASH, FERTILIZERS, PESTICIDES, HERBICIDES, DETERGENTS, SANITARY WASTE AND OTHER MATERIALS TO PRECIPITATION AND STORMWATER RUNOFF. THESE MATERIALS MUST BE PREVENTED FROM BECOMING A POLLUTANT SOURCE.

NOTE: TO PREVENT THESE MATERIALS FROM BECOMING A SOURCE OF POLLUTANTS, CONSTRUCTION AND POST-CONSTRUCTION ACTIVITIES RELATED TO A PROJECT MAY BE REQUIRED TO COMPLY WITH APPLICABLE PROVISION OF RULES RELATED TO SOLID, UNIVERSAL, AND HAZARDOUS WASTE, INCLUDING, BUT NOT LIMITED TO, THE MAINE SOLID WASTE AND HAZARDOUS WASTE MANAGEMENT RULES; MAINE HAZARDOUS WASTE MANAGEMENT RULES; MAINE OIL CONVEYANCE AND STORAGE RULES; AND MAINE PESTICIDE REQUIREMENTS.

5. EXCAVATION DEWATERING: EXCAVATION DEWATERING IS THE REMOVAL OF WATER FROM TRENCHES, FOUNDATIONS, COFFER DAMS, PONDS, AND OTHER AREAS WITHIN THE CONSTRUCTION AREA THAT RETAIN WATER AFTER EXCAVATION. IN MOST CASES THE COLLECTED WATER IS HEAVILY SILTED AND HINDERS CORRECT AND SAFE CONSTRUCTION PRACTICES. THE COLLECTED WATER REMOVED FROM THE PONDED AREA, EITHER THROUGH GRAVITY OR PUMPING, MUST BE SPREAD THROUGH NATURAL WOODED BUFFERS OR REMOVED TO AREAS THAT ARE SPECIFICALLY DESIGNED TO COLLECT THE MAXIMUM AMOUNT OF SEDIMENT POSSIBLE, LIKE A COFFERDAM SEDIMENTATION BASIN. AVOID ALLOWING THE WATER TO FLOW OVER DISTURBED AREAS OF THE SITE. EQUIVALENT MEASURES MAY BE TAKEN IF APPROVED BY THE DEPARTMENT.



NOTE: DEWATERING CONTROLS ARE DISCUSSED IN THE "MAINE EROSION AND SEDIMENT CONTROL BMPS, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION."

6. AUTHORIZED NON-STORMWATER DISCHARGES: IDENTIFY AND PREVENT CONTAMINATION BY NON-STORMWATER DISCHARGES. WHERE ALLOWED NON-STORMWATER DISCHARGES EXIST, THEY MUST BE IDENTIFIED AND STEPS SHOULD BE TAKEN TO ENSURE THE IMPLEMENTATION OF APPROPRIATE POLLUTION PREVENTION MEASURES FOR THE NON-STORMWATER COMPONENT(S) OF THE DISCHARGE. AUTHORIZED NON-STORMWATER DISCHARGES ARE:.
   - DISCHARGES FROM FIREFIGHTING ACTIVITY;
   - FIRE HYDRANT FLUSHINGS;
   - VEHICLE WASHWATER IF DETERGENTS ARE NOT USED AND WASHING IS LIMITED TO THE EXTERIOR OF VEHICLES (ENGINE, UNDERCARRIAGE, AND TRANSMISSION WASHING IS PROHIBITED);
   - DUST CONTROL RUNOFF IN ACCORDANCE WITH PERMIT CONDITIONS AND APPENDIX (C)(3);
   - ROUTINE EXTERNAL BUILDING WASHDOWN, NOT INCLUDING SURFACE PAINT REMOVAL, THAT DOES NOT INVOLVE DETERGENTS;
   - PAVEMENT WASHWATER (WHERE SPILLS/LEAKS OF TOXIC OR HAZARDOUS MATERIALS HAVE NOT OCCURRED, UNLESS ALL SPILLED MATERIAL HAD BEEN REMOVED) IF DETERGENTS ARE NOT USED;
   - UNCONTAMINATED AIR CONDITIONING OR COMPRESSOR CONDENSATE;
   - UNCONTAMINATED GROUNDWATER OR SPRING WATER;
   - FOUNDATION OR FOOTER DRAIN-WATER WHERE FLOWS ARE NOT CONTAMINATED;
   - UNCONTAMINATED EXCAVATION DEWATERING (SEE REQUIREMENTS IN APPENDIX C(5));
   - POTABLE WATER SOURCES INCLUDING WATERLINE FLUSHINGS; AND
   - LANDSCAPE IRRIGATION
7. UNAUTHORIZED NON-STORMWATER DISCHARGES: THE DEPARTMENT'S APPROVAL UNDER THIS CHAPTER DOES NOT AUTHORIZE A DISCHARGE THAT IS MIXED WITH A SOURCE OF NON-STORMWATER, OTHER THAN THOSE DISCHARGES IN COMPLIANCE WITH APPENDIX C (6). SPECIFICALLY, THE DEPARTMENT'S APPROVAL DOES NOT AUTHORIZE DISCHARGES OF THE FOLLOWING:
   - WASTEWATER FROM THE WASHOUT OR CLEANOUT OF CONCRETE, STUCCO, PAINT, FORM RELEASE OILS, CURING COMPOUNDS OR OTHER CONSTRUCTION MATERIALS;
   - FUELS, OILS OR OTHER POLLUTANTS USED IN VEHICLE AND EQUIPMENT OPERATION AND MAINTENANCE;
   - SOAPS, SOLVENTS, OR DETERGENTS USED IN VEHICLE AND EQUIPMENT WASHING; AND
   - TOXIC OR HAZARDOUS SUBSTANCES FROM A SPILL OR OTHER RELEASE.

ADDITIONAL REQUIREMENTS: ADDITIONAL REQUIREMENTS MAY BE APPLIED ON A SITE-SPECIFIC BASIS.

CONSTRUCTION OVERSITE

THE APPLICANT WILL RETAIN THE SERVICES OF A PROFESSIONAL ENGINEER TO INSPECT THE CONSTRUCTION AND STABILIZATION FOR ALL STORMWATER MANAGEMENT STRUCTURES. IF NECESSARY, THE INSPECTING ENGINEER WILL INTERPRET THE POND'S CONSTRUCTION PLAN FOR THE CONTRACTOR. ONCE ALL STORMWATER MANAGEMENT STRUCTURES ARE CONSTRUCTED AND STABILIZED, THE INSPECTING ENGINEER WILL NOTIFY THE DEPARTMENT IN WRITING WITHIN 30 DAY

SOIL FILTER MEDIA NOTES:

SOIL FILTER MEDIA SHALL CONFORM TO MAINE DEP SOIL FILTER MEDIA OPTION 1, PER MAINE DEP STORMWATER BMP MANUAL CHAPTER 7.1. AS FOLLOWS:

1.1. SOIL FILTER MEDIA SHALL CONSIST OF A SILTY SAND SOIL OR SOIL MIXTURE COMBINED WITH A MATURE, MODERATELY FINE SHREDDED BARK OR WOOD FIBER MULCH.
1.2. THE RESULTING MIX SHALL CONTAIN NO LESS THAN 10% BY DRY WEIGHT ORGANIC MATERIAL.
1.3. THE RESULTING MIX SHALL CONTAIN 8% TO 12% PASSING THE NO. 200 SIEVE.
1.4. THE RESULTING MIX SHALL CONTAIN A MAXIMUM CLAY CONTENT OF 2%.

UNDERDRAIN OUTLET VALVE CALIBRATION NOTES:

AFTER THE COMPLETION OF INSTALLATION OF THE SOIL FILTER MEDIA, THE CONTRACTOR SHALL PERFORM THE FOLLOWING PROCEDURE TO CALIBRATE THE UNDERDRAIN OUTLET VALVE TO ACHIEVE THE 0.75"/HOUR DESIGN FLOW RATE.

1. BEGIN WITH VALVE HALF-OPEN.
2. CAREFULLY FLOOD THE BASIN UNTIL THERE IS 18" OF WATER STORED ABOVE THE SOIL FILTER MEDIA (UP TO THE HEIGHT OF OUTLET STRUCTURE RIM) WITHOUT CAUSING EROSION OF THE SOIL FILTER MEDIA.
3. RECORD THE TIME IT TAKES FOR THE 18" OF WATER TO DRAIN TO THE TOP OF THE SOIL FILTER MEDIA. THE TARGET DRAINDOWN TIME IS 24 HOURS.
4. IF THE 18" OF WATER DRAINS IN LESS THAN 24 HOURS, CLOSE THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
5. IF THE 18" OF WATER DRAINS IN MORE THAN 24 HOURS, OPEN THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
6. REPEAT THIS PROCESS UNTIL THE 18" OF WATER DRAINS IN 24 HOURS.

TABLE 1: MDOT SPECIFICATIONS FOR UNDERDRAINS (MDOT #703.22)

NOTES:
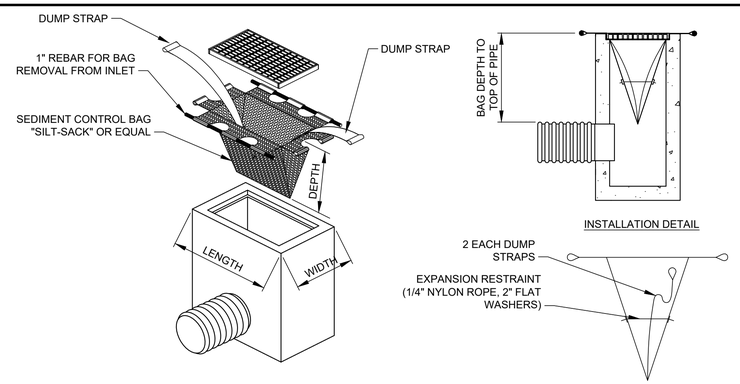
1. TEMPORARY SEDIMENT FENCE SHALL BE INSTALLED PRIOR TO ANY GRADING WORK IN THE AREA TO BE PROTECTED. THEY SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD AND REMOVED IN CONJUNCTION WITH THE FINAL GRADING AND SITE STABILIZATION.
2. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 592 GEOTEXTILE TABLE 1 OR 2, CLASS L WITH EQUIVALENT OPENING SIZE OF AT LEAST 30 FOR NONWOVEN AND 50 FOR WOVEN.
3. FENCE POSTS SHALL BE EITHER WOOD POST WITH A MINIMUM CROSS-SECTIONAL AREA OF 3 SQ. IN. OR A STANDARD STEEL POST.

5 SILT FENCE



NO SCALE

8 STABILIZED CONSTRUCTION ENTRANCE

NO SCALE

NOTES:
1. THE ENTRANCE/EXIT PAD SHOULD HAVE A LENGTH OF 50 FEET OR MORE AND A 12-FOOT MINIMUM WIDTH (OR AS APPROPRIATE TO CONTAIN THE WHEEL BASE OF CONSTRUCTION VEHICLES PLUS 3 FEET ON EITHER SIDE).
2. THE PAD SHOULD BE 6 INCHES OR MORE THICK WITH ANGULAR AGGREGATE (2-3 INCH DIAMETER). APPROPRIATE RECLAIMED CONCRETE MATERIAL MAY BE USED.
3. THE AGGREGATE SHOULD BE PLACED OVER A GEOTEXTILE FILTER TO PREVENT THE STONES FROM PUSHING INTO THE NATIVE SOIL.
4. AT THE BOTTOM OF SLOPES, A DIVERSION RIDGE SHOULD BE PROVIDED TO INTERCEPT RUNOFF.
5. BERMS MAY BE NECESSARY TO DIVERT WATER AROUND ANY EXPOSED SOIL, AND RUNOFF SHOULD BE DIRECTED TO A SEDIMENT TRAP.
6. THE WHEELS OF CONSTRUCTION EQUIPMENT MAY BE WASHED PRIOR TO EXITING THE SITE. WASHING SHOULD BE PERFORMED IN AN AREA THAT DRAINS TO A SEDIMENT TRAP OR BASIN.
7. THE PAD SHOULD BE INSPECTED WEEKLY, AND BEFORE AND AFTER EACH STORM. THE PAD MAY HAVE TO BE REPLACED IF THE VOIDS BECOME FILLED WITH SEDIMENT. STREET SWEEPING MAY BE NECESSARY

USA G2	2'-8 1/2"	2'-3 1/2"	VARIES

NOTES:
1. THE DIMENSION CHART ABOVE IS FOR STANDARD CATCH BASINS AND INLETS ONLY. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING THE CORRECT SIZE DEVICE FOR EACH INLET.
2. FOR NON-STANDARD CATCH BASINS AND INLETS, THE CONTRACTOR SHALL MEASURE DIMENSIONS IN THE FIELD AND ORDER THE APPROPRIATE SIZE(S).
3. THE INLET SEDIMENT CONTROL DEVICE SHALL BE OF HIGH FLOW DESIGN (200 GAL/MIN/FT), AS PER THE MANUFACTURER'S SPECS.
4. THE SEDIMENT CONTROL DEVICE SHALL BE INSPECTED DAILY BY THE CONTRACTOR AND MAINTAINED A MINIMUM ONCE PER MONTH OR WITHIN THE 48 HOURS FOLLOWING A STORM EVENT. FILTER SHALL BE CLEANED IN A MANNER WHICH ENSURES THAT ALL SEDIMENT REMAINS ON SITE.
5. SUBSTITUTION OF A SHEET OF FILTER FABRIC PLACED OVER THE OPENING OF THE INLET IS NOT APPROVED.
6. RECESSED CURB INLET CATCH BASINS MUST BE BLOCKED WHEN USING FILTER FABRIC INLET SACKS, SIZE OF FILTER INLET SACK TO BE DETERMINED BY MANUFACTURER.
7. THE FILTER SHALL BE REPLACED OR CLEANED WHEN THE BAG BECOMES HALF FULL.
8. SEE INLET PROTECTION NOTES STD. DETAIL E3.

6 SILT SACK INLET PROTECTION

NOTES:
1. THE SOIL SURFACE SHOULD BE FINELY GRADED AND SMOOTH FOR THE BLANKET TO HAVE DIRECT CONTACT WITH THE SOIL AND TO PREVENT UNDERMINING. EROSION CONTROL BLANKETS PERFORM BEST ON LOAMY SOILS AND SHOULD NOT BE USED ON ROCKY SITES OR SHALLOW SOILS.
2. SEED SHOULD BE SOWN BEFORE INSTALLING THE EROSION CONTROL BLANKET.
3. ALWAYS UNROLL THE BLANKET DOWNHILL WITHOUT STRETCHING AND ANCHOR THE UPSLOPE EDGE IN A 12 INCH DEEP TRENCH THAT IS BACKFILLED AND TAMPED.
4. OVERLAP SHINGLE STYLE A MINIMUM OF 12 INCHES AT THE TOP OF EACH ROW AND 4 INCHES AT THE EDGES OF PARALLEL ROWS. ANCHOR ALONG THE OVERLAP WITH A MAXIMUM SPACING OF 3 FEET OR AS REQUIRED BY THE MANUFACTURER.

7 BIODEGRADABLE STABILIZATION MATTING

NO SCALE

NOTES:
1. INSTALL THE FILTER BAG PRIOR TO INITIATING ANY ACTIVITIES WHICH WILL REQUIRE DEWATERING.
2. THE TYPE OF FABRIC SHOULD BE BASED ON THE SIZE OF SOIL PARTICLES TO BE TRAPPED (I.E. A WOVEN MATERIAL FOR COARSE PARTICLES AND A NONWOVEN MATERIAL FOR FINER PARTICLES).
3. A FILTER BAG SHOULD BE LOCATED IN AN AREA MOSTLY LEVEL (WITH LESS THAN 5% SLOPE). A PAD OF CRUSHED GRAVEL MAY BE PROVIDED.
4. AVOID DISCHARGING TO AN AREA THAT IS BARE OF VEGETATION OR NEWLY VEGETATED. ANY SIGN OF EROSION OR CHANNELIZATION FROM THE DISCHARGED WATER REQUIRES IMMEDIATELY CORRECTION.
5. FILTER BAGS HAVE A FINITE CAPACITY FOR SEDIMENT COLLECTION AND MAY BE PRONE TO PLUGGING. AVOID OVER-PRESSURIZING THE BAG OR IT MAY BURST.

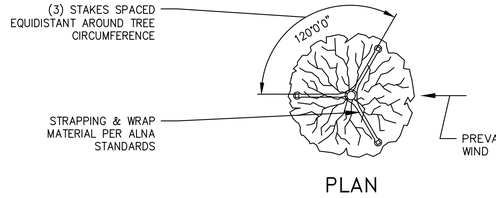
SHEET NAME: **REVEGETATION PLAN**

SHEET NO.: **C-015**

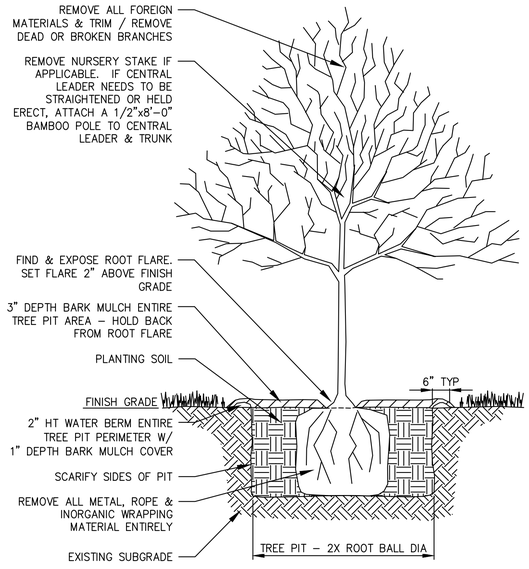
DICASTELNUOVO, VINNIE B:\Working\UNIVERSITY OF NEW ENGLAND\2203703 UNE Marine Science Center Pier\00_CAD\Design\Sheet\2203703-C-015.dwg - 6/9/2025

VEGETATION GENERAL NOTES:



1. VEGETATION MANAGEMENT (INSTALLATION AND MAINTENANCE) SHALL COMPLY WITH CITY OF BIDDEFORD SHORELAND ZONING ORDINANCE REQUIREMENTS.
   - 1.1. ALL REVEGETATION MUST OCCUR ALONG THE SAME SEGMENT OF SHORELINE AND IN AS CLOSE OF PROXIMITY AS PRACTICAL TO THE LOCATION WHERE THE VEGETATION WAS REMOVED.
   - 1.2. ALL VEGETATION REMOVED MUST BE REPLACED WITH NATIVE, NON-INVASIVE SPECIES.
   - 1.3. AT LEAST THREE DIFFERENT SPECIES OF TREES AND WOODY VEGETATION UNDER THREE FEET IN HEIGHT SHALL BE USED.
   - 1.4. NO MORE THAN ONE SPECIES OF TREES AND WOODY VEGETATION UNDER THREE FEET IN HEIGHT SHALL MAKE UP MORE THAN 50% OF THE TOTAL NUMBER OF TREES AND WOOD VEGETATION UNDER THREE FEET IN HEIGHT PLANTED.
   - 1.5. SURVIVAL OF ALL VEGETATION MUST BE MAINTAINED FOR A MINIMUM OF FIVE YEARS.
2. ALL REMOVED NON-NATIVE PLANT MATERIAL SHALL BE PROPERLY DISPOSED OF BY BURNING ON-SITE OR DISPOSAL AT A WASTE RECEIVING FACILITY.
3. AN UPDATED LIST OF NON-NATIVE INVASIVE VEGETATION IS MAINTAINED BY THE DEPARTMENT OF AGRICULTURE, CONSERVATION AND FORESTRY'S NATURAL AREAS PROGRAM:
4. HTTPS://WWW.MAINE.GOV/DACF/MNAP/FEATURES/INVASIVE_PLANTS/INVASIVES.HTM
5. PLANT SPECIES SUBSTITUTIONS SHALL BE APPROVED BY THE OWNER. CONTRACTOR SHALL REFERENCE THE FOLLOWING RESOURCES FOR COASTAL PLANT LIST GUIDELINES: CUMBERLAND COUNTY SOIL & WATER CONSERVATION DISTRICT - COASTAL PLANTING GUIDE; UNIVERSITY OF MAINE COOPERATE EXTENSION; AND/OR THE WILD SEED PROJECT.

VEGETATION INSTALLATION NOTES:



1. THE CONTRACTOR SHALL TAKE CARE NOT TO DAMAGE VEGETATION WITHIN THE CONSTRUCTION AREA UNLESS NOTED TO BE REMOVED, LIMBED OR PRUNED. THIS MAY REQUIRE HAND EXCAVATION WITHIN TREE DRIPLINES.
2. ALL PLANT MATERIAL SELECTIONS SHALL BE APPROVED BY THE OWNER PRIOR TO INSTALLATION.
3. ALL NEW PLANTING MATERIAL SHALL CONFORM TO THE MINIMUM GUIDELINES ESTABLISHED FOR NURSERY STOCK PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC. IN ADDITION ALL NEW PLANT MATERIAL FOR THE PROJECT SHALL BE OF THE HIGHEST SPECIMEN QUALITY.
4. ALL NEW PLANTS SHALL BE BALLED AND BURLAPPED OR CONTAINER GROWN UNLESS OTHERWISE NOTED ON THE PLANT LIST.
5. CONTRACTOR SHALL SUPPLY ALL NEW PLANT MATERIAL IN QUANTITIES SUFFICIENT TO COMPLETE THE PLANTING SHOWN ON THE DRAWINGS.
6. NO TREES SHALL BE PLANTED BEFORE ACCEPTANCE OF ROUGH GRADING. TREES SHALL BEAR SAME RELATIONSHIP TO FINISH GRADE AS THEY BORE TO PREVIOUS GRADE.
7. STAKE LOCATION OF ALL PROPOSED PLANTING FOR APPROVAL BY THE OWNER PRIOR TO COMMENCEMENT OF PLANTING.
8. ALL EXISTING TREES TO REMAIN SHALL BE PROPERLY PROTECTED, PRUNED AND FERTILIZED PER THE SPECIFICATIONS.
9. ALL LAWN AREAS DISTURBED BY CONSTRUCTION OPERATIONS INSIDE AND OUTSIDE THE LIMIT OF WORK SHALL BE LOAMED AND SEEDED AS SPECIFIED.
10. ALL PLANT BEDS ARE TO RECEIVE THREE INCHES (4") OF SHREDDED BARK MULCH AS SPECIFIED.
11. ANY PROPOSED SUBSTITUTIONS OF PLANT SPECIES SHALL BE MADE WITH PLANTS OF EQUIVALENT OVERALL FORM, HEIGHT, BRANCHING HABIT, FLOWER, LEAF, COLOR, FRUIT AND CULTURE ONLY AS APPROVED BY OWNER.
12. ALL AREAS TO BE SEEDED SHALL RECEIVE SOIL PREPARATION AS SPECIFIED PRIOR TO SEEDING, UNLESS OTHERWISE NOTED ON PLAN.
13. PREPARE ALL PLANT PITS WITH PLANTING SOIL TO A MINIMUM DEPTH MATCHING THE DEPTH OF ROOT BALLS.
14. NATIVE PLANT SPECIES REMOVED SHALL BE REPLANTED WITH IN-KIND SPECIES AND/OR THOSE PROVIDE IN THE PLANT LIST.

SCALE: 1/4" = 1'-0"

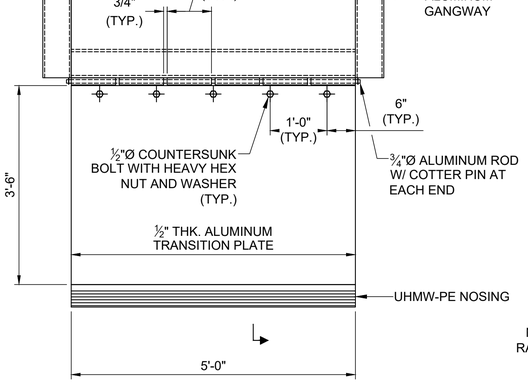
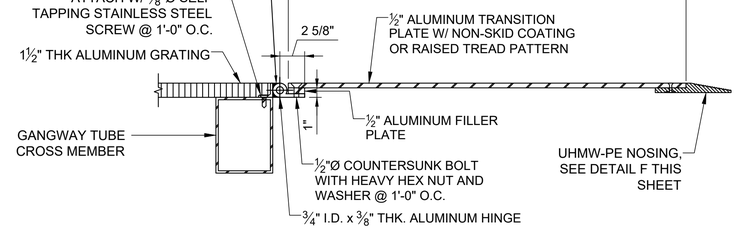
B GANGWAY ELEVATION



SCALE: 1/4" = 1'-0"

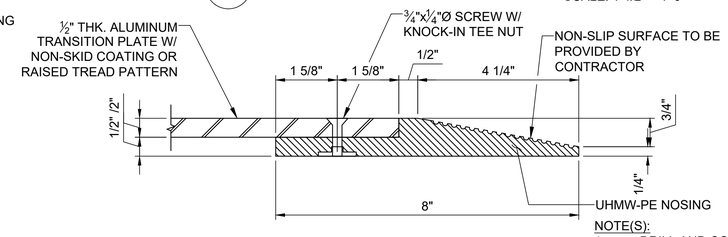
C TYPICAL GANGWAY SECTION

SCALE: 3/4" = 1'-0"



NOTE(S):
1. CONTRACTOR AND GANGWAY MANUFACTURER SHALL DETERMINE FINAL GANGWAY MEMBER SIZES AND SUBMIT TO ENGINEER FOR REVIEW AND APPROVAL.
2. ALUMINUM GRATING SHALL MEET ADA REQUIREMENTS.

D TRANSITION PLATE DETAIL



SCALE: 3/4" = 1'-0"

NOTES:
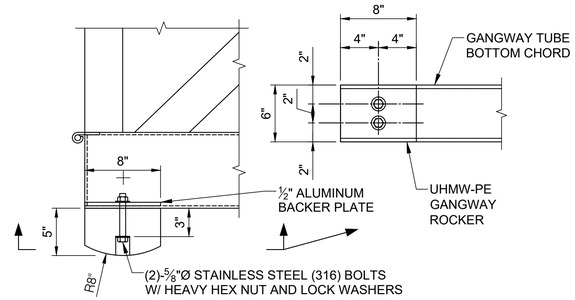
1. CONTRACTOR SHALL DETERMINE FINAL GANGWAY MEMBER SIZES. MEMBERS ONLY SHOWN SCHEMATICALLY FOR REFERENCE.
2. CONTRACTOR SHALL SUBMIT FINAL GANGWAY SHOP DRAWINGS AND CALCULATION PACKAGE SIGNED AND SEALED BY A PROFESSIONAL ENGINEER LICENSED IN THE STATE OF MAINE.
3. ALL GANGWAY TUBE MEMBERS SHALL BE 6061-T6 ALUMINUM.
4. ALL GANGWAY TUBE MEMBERS SHALL BE CAPPED AND SEALED W/ ALUMINUM PLATES AT EXPOSED ENDS.

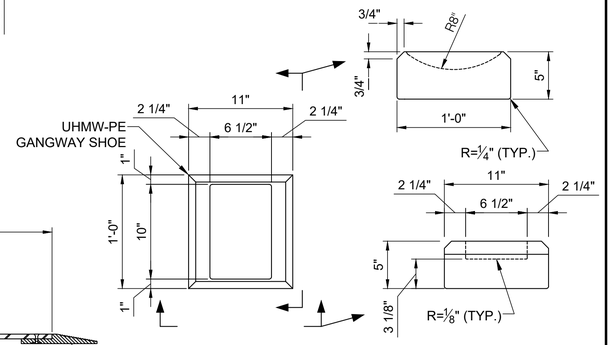
E GANGWAY TRANSITION PLATE SECTION



SCALE: 1-1/2" = 1'-0"

F UHMW-PE NOSING DETAIL

SCALE: 6" = 1'-0"



NOTE(S):
1. DRILL AND COUNTER BORE TRANSITION PLATES. COUNTERSINK HOLES FOR TEE NUTS TO TWICE BASE THICKNESS. SCREWS TO BE COUNTERSUNK INTO PLATE. INSTALL NEW SCREWS OVER SILICONE TO COVER EXPOSED ALUMINUM.
2. UHMW-PE NOSING DETAILS TO BE DETERMINED AFTER TRANSITION PLATE INSTALLATION AND SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS SET FORTH IN ADA.

G GANGWAY ROCKER DETAIL

SCALE: 1-1/2" = 1'-0"

NOTES:
1. ROCKER MATERIAL SHALL BE VIRGIN UHMW-PE, BLACK IN COLOR.
2. ALUMINUM BACKER PLATE PLAN DIMENSIONS SHALL MATCH ROCKER PLAN DIMENSIONS.

J GANGWAY SHOE DETAIL

SCALE: 1-1/2" = 1'-0"

NOTE: SHOE MATERIAL SHALL BE VIRGIN UHMW-PE, BLACK IN COLOR.

By signing this mooring permit application for the City of Biddeford I hereby expressly give my permission to the Harbor Master, the Assistant Harbor Master or anyone lawfully designated by the Harbor Master to raise, lift, possess, transfer or otherwise handle any lobster traps, buoys, cars, wharfs, weirs, nets or any other sort of fishing gear belonging to me as the licensed owner which appears in any channel to and from any harbor which is designated by the Biddeford City Ordinance as an area in which lobster gear or fishing gear of any type is prohibited or which appears within 100 feet of any mooring in violation of an ordinance for the city of Biddeford. I further give my permission to the Harbor Master, Assistant Harbor Master or the Harbor Master's designated agent permission to remove, transfer and secure any fishing gear of any type or nature which is found in violation of any ordinance of the city of Biddeford. I further agree to pay for any and all costs related to the removal, transfer, transportation and storage of said fishing gear. Permission by me, by signing this permit, is given pursuant of Title 12, M.R.S.A. §6434.
This permit is non-transferable and is for the use of the above named boat only, except on a temporary basis at discretion of Harbor Master. The location is subject to change at any time at discretion of Harbor Master or Deputy as conditions dictate. Holder of permit is responsible to set mooring and make adjustments as required for the safety of adjacent boats. Permit numbers must be painted on mooring float in at least 3" letters of a contrasting color.
If mooring is already in place the Harbor Master/Assistant will go to location with owner to identify and approve or reassign location. If a new mooring, Harbor Master/Assistant will inspect and oversee placement of mooring.
Any boat on a licensed mooring taking on water and in danger of sinking, the Harbor Master may authorize a private contractor to pump out said boat at the expense of the owner. The owner must pay contractor within 60 days or lose mooring privileges.
Registration form and fee must be received before March 15 and mooring in before June 30 or mooring will be considered abandoned and location reassigned, unless prior arrangements have been made with the Harbor Master.
Application permit fee $10.00 to be applied against the mooring fee.

Subject: This UNE pier decision seems pretty simple

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Dear Planning Board,

Although I now live in western Maine near the NH border, my grandparents allowed me to spend many, many hours with them on the Saco River when I was growing up. They lived in Biddeford all their lives. These days I will still come over to Biddeford fairly regularly with my own boat, putting in at Marblehead and enjoying the day, as I did on the 4th of July this year.

A fellow boater I've known for many years told me about the UNE thing yesterday, so this morning I went to the Biddeford website, downloaded all the documents, and watched all the videos. Here's my point of view:

--- The chairperson of the planning board made an excellent point during the May 21st meeting. You are guided by a code of ethics to make sure every claim that UNE makes is documented.
--- It's pretty clear that the guys who have moorings where UNE wants to build are not moving, so I don't see how you can approve UNE's application. Other people are already there.
--- The pier has not been reviewed or approved by a real harbor master.
--- The engineering outfit that UNE hired to sell their pier to you wrote in a memo, contained in the materials that you have reviewed, that the place Biddeford's harbor master suggested has deeper water than the location UNE wants. I mean…c'mon! Why can't the university use common sense?
--- I read your code of ethics very carefully. You are each required to obtain what information and knowledge is necessary to make the wisest decision possible. It seems to me there's a better location than what UNE proposed, and the planning board has no choice but to investigate that issue.

To conclude, UNE's own consultant says there's deeper water where the harbormaster wanted the pier to go all along, making it a better place for a 60-foot research vessel. Also, putting it in the deeper water would avoid the entire problem of current mooring owners, who have made it clear that they're not moving.

I don't see that you have any choice but to deny this application, and invite UNE to submit another one that is thought out in a much better way.

That's my opinion, and thanks for listening.

Paul

Subject: Biddeford people trust Planning Board's ethics

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Hi Harry,

The City Planner wrote, “The Board may only base their decision on the specific criteria listed in the Site Plan and Shoreland Zoning laws as they specifically relate to Piers & Docks.” You wrote, “I concur with David’s position.”

After that explanation circulated in the community, I got a ton of feedback. I regret to say some of it was angry feedback. If I had to paraphrase, I would say community sentiment is that the Planner’s analysis is an extremely narrow interpretation, concocted to encourage the Planning Board to approve UNE’s application. It was pointed out to me that, better than a single opinion, a controlling and legally binding document exists, “Biddeford Planning Board RULES OF PROCEDURE AND CODE OF ETHICS.” Excerpts:

- “The Planning Board’s purpose is to implement the Comprehensive Plan and to foster coordinated and harmonious development…that will…best and most efficiently promote the public health, safety, and general welfare.”

- “Appointment to the Planning Board…represents a public trust…”

- “Board members are therefore expected to keep consideration of the general public interest foremost in their deliberations.”

- “Board members are also expected to retain an open mind to all viewpoints.”

- “…the Board should attempt to draw out and clarify the positions of people on all sides of the issue…”

- “Each Planning Board member has the responsibility to acquire whatever information and knowledge is necessary to fully understand and make wise decisions and recommendations in the interest of the City.”

- “Members are encouraged to expand their knowledge and understanding of planning issues…”

- "…members have the responsibility to insist that they are provided…information of sufficient scope and depth to allow them to fully understand the issues before the Board and the alternative actions available to the Board."

- "If the application….and other documents…are insufficient to enable a Board member to fully understand the issues immediately before the Board, that Board member has the responsibility to ask questions…to acquire the necessary understanding."

- The Planning Board has the responsibility to ensure that the decision-making process it applies to any issue before it is not only rational, but is also perceived as rational."

- "Furthermore…findings should be supported by information available to the Board, whether it is information…contained in…(a) document submitted to the Board, or included in testimony presented before the Board…"

- "The Board should thus explicitly evaluate all facts, alternatives, means, and consequences relevant to its decisions."

I have been asked by my neighbors to point out that members of the Planning Board took an oath not to faithfully adhere to the opinion of the City Planner, but to faithfully adhere to the Rules of Procedure and Code of Ethics.

The Planner is trying to persuade the Board ***not*** to look at important information. Whereas the Code of Ethics specifically instructs each Board member to "evaluate all facts, alternatives, means, and consequences." Further, "Each Planning Board member has the responsibility to acquire whatever information and knowledge is necessary to fully understand and make wise decisions and recommendations in the interest of the City."

We suggest that the Planner's advice to the Board directly contradicts the Rules of Procedure and Code of Ethics. This is alarming, given the fact that the Planning Board has been left completely unadvised by the Harbormaster, the Assistant Harbormaster and the Biddeford Harbor Commission. And as the Maine Harbor Masters Association has pointed out, no certified Harbormaster has reviewed or approved UNE's application.

With all that said, despite the unprecedented and highly irregular circumstances of this situation, I think Biddeford citizens are very confident that each member of the Planning Board will adhere to the Rules of Procedure and the Code of Ethics. In our opinion, that includes the certainty that Board members will "acquire the necessary understanding" of water depth, current, wind, silt build-up, extreme weather events, extreme high tides, extreme low tides, boat traffic on the river, moorings in the immediate area, etc.

As always, Harry, thank you for your professional and courteous consideration of information that this community submits to you.

Respectfully,

JS

Subject: For the record, UNE denied Mr. Patoine's request

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

During the May 21 Planning Board meeting, member Larry Patoine appropriately asked that the Board be supplied with a copy of the application that UNE filed with the National Institute of Standards & Technology (NIST.)

Buried in the almost one thousand pages of materials that the Planning Board has made available online is notification to the Board and Mr. Patoine that UNE has refused Mr. Patoine's request. That is made clear at the bottom of page 5 in a memo written by Alan Thibeault and submitted to the City on June 11, 2025.

Sincerely,

JS

Subject: A request for legal analysis: city's regulatory process

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Good morning, Harry, I hope you had a great weekend.

Al Thibeault said during the site walk on June 9 that he knows nothing about boats and nothing about the river. The Maine Harbor Masters Association has confirmed that Wayne Duffett of TEC Associates is not a Harbormaster. Just like Al Thibeault, he doesn't know the river --- no Harbormaster has approved UNE's application. Biddeford went totally unrepresented at the Saco River Corridor Commission --- our delegate abstained completely from all discussion, did not raise concerns, and did not vote. The DEP Commissioner denied a request for a public hearing. The U.S. Army Corps confirmed that all public input submitted until they made their decision was tossed into the garbage can and not considered.

Further, the Maine Harbor Masters wrote to Jim Bennett on June 4, 2024, "...we recommend that you work within the review hierarchy laid out in your harbor ordinance." But as he was busy ruining the city's finances, Bennett also made sure that the Harbormaster could not review the UNE proposal. He made sure the Assistant Harbormaster could not review the UNE proposal. As a result, he in effect liquidated the Harbor Commission, which has ceased to function or even meet. It never reviewed the UNE proposal.

Clearly UNE is fast-tracked on their way to a clean sweep. Their threat to sue the City if their exact location is not approved has been extremely effective. The largest structure ever built on the lower Saco River, in the busiest part of the river, subject to very dynamic tidal and weather forces, is going to slip by with absolutely nobody in authority looking at those dynamic forces to which the pier and a 60-foot vessel will be subjected. That's like Big Pharma rushing a new opioid onto the market without the FDA looking at potential side effects.

Many suspect Bennett intended this specific outcome all along --- easy approval without meaningful review. Certainly UNE is delighted with how far they have come without anybody in authority looking at actual river conditions.

As I have written before, I have the highest respect for your integrity and legal analysis. And therefore I am quite sure you were 100% accurate when you wrote the following:

“At this time, I see no basis for the City’s Planning Board to deny this permit based upon the water depth at the location, the current, or any of the accusations made at the last meeting - as there are no standards within the City’s Code of Ordinances/Shoreland Zoning Ordinance that would justify or support the denial of a pier based on such claims by the opponents.”

I understand and respect your strict interpretation of the Code. For the benefit of local residents and of Planning Board members, I’d like to ask one question. Do the City’s Code of Ordinances/Shore Ordinance in any way *prohibit* members of the Planning Board from asking questions about water depth, current, wind, silt build-up, extreme weather events, extreme high tides, extreme low tides, boat traffic on the river, moorings in the immediate area, etc.?

Thank you, Harry. I understand that the complete disintegration of the normal regulatory process has put you into a very difficult position, unfairly so. We are grateful for your continued service to the people of Biddeford.

Collins, King, Pingree staffers lock arms, advance UNE pier secrecy

PRESS CONTACT: John Schafer, HillsBeachJohn@yahoo.com, 207-294-2410

(Biddeford, Maine) It appears Saco and Biddeford residents will not get information requested from Maine's federal delegation about components of a federal grant awarded to the University of New England (UNE) by the National Institute of Standards & Technology (NIST).

Several months ago a community organizer asked if the $3.5 million grant to help build a new marine research pier on the Saco River has a portion of its funds set aside for "administration" of the grant and if it does, what percentage of the funds UNE would pocket for that function. Local field representatives for U.S. Senator Susan Collins, U.S. Senator Angus King and U.S. Representative Chellie Pingree won't answer the two questions.

"Today I'm distributing the email history. It shows constituents have been polite in requesting the information, and it seems clear that the failure to even reply is intentional," said John Schafer, former Chair of the Biddeford Harbor Commission.

(One document attached: 1) email messages to Collins, King, & Pingree staffers, followed by 2) Schafer dialogue with Collins' staff about NIST grant.)

Schafer said he's not surprised by the stonewalling, because it follows a successful effort earlier this year by Collins' office to dodge a request for contact info at NIST so that he could file a FOIA request and obtain a copy of the application UNE filed to secure the grant.

"I made several requests, they tried several times to talk to me on the phone instead of just giving me the information, and ultimately never provided the contact information after promising it to send it. They also denied ever having been in contact with NIST via email, which I found hard to believe. After all, Senator Collins sent out a press release taking full credit for securing the grant for the university," Schafer said.

Last Wednesday the Biddeford Planning Board tabled UNE’s effort to secure approval for the proposes research pier.

---30---

Dear Biddeford Planning Board,

I wrote to you recently, and to re-cap very briefly, I spent 46 years in the commercial fishing industry. I was appointed to Saco's very first Coastal Waters Commission, was executive director of the local Chamber of Commerce for several years, served as Director of Transportation for BSOOB Transit, and founded the Northwest Atlantic Marine organization (NAMA), an organization that emphasized *collaboration* and *rational discussion* between commercial fishermen and federal regulators. Hardly an easy task, I assure you!

I have a positive relationship with UNE and its president, and always look forward to teaching my seminars with students who are in the Marine Science Program. My relationship with UNE spans over 15 years. I agree 100% that UNE needs a new pier for its ambitious and critical research activities.

I attended the May 21 Planning Board meeting, and the Board left no doubt that it will do a site survey. Mr. Dubois correctly surmised that this should happen at low tide, and Mr. Patoine asked that a system for easily determining river depth be in place. Since getting the Board onto the river is now a certainty, I would like to volunteer my services to help the Planning Board achieve this mission. And of course in the spirit of transparency and openness, which as a common theme during the planning board meeting, entrusting me as a third party, we can assure you these important criteria will be addressed.

I've been brainstorming just a bit, and here are some initial thoughts:

- I assume UNE will want at least two or three people on board. The City will want Board members, the Planner, and probably a reporter or two to act as the eyes and ears for the public. I anticipate a handful of others as well, so my guess is between 12 and 15 people in total.
- Most likely you'll need three boats, and it's less likely but possible you'll need four.
- At least one of the boats should have a depth finder. Two would be better. I can help round up the boats.
- You'll want at least one independent person who knows the river extremely well, and who can serve as a captain for the expedition. That person would coordinate navigation of the boats, and serve as an authority figure for any questions that the Board, UNE or the press may have about how the river flows. That person should anticipate coordinating the outing with the Biddeford Planning Department. I'd be happy to assist.
- Off the top of my head, I think Saco's present Harbormaster would be a good candidate. I am unaware of any public statements he has made about UNE's application. Together, he and I can provide the necessary expertise and knowledge to accomplish this important sight visit.

- Since the main question at hand is depth at two locations on the river, the captain of the expedition will be able to figure out the best way to safely acquire the data that the site visit is intended to collect.
- A good launching point for the site visit would be the Camp Ellis pier. Mr. Angers mentioned that he would like to see the site from the Saco side as well, so his request would be satisfied. I would be happy to work with Saco City Hall to see if free parking passes could be arranged for everyone who will be on the boats that day.

That's just a brief sketch, but I hope it illustrates the type of planning that's going to be necessary. Several months ago I wrote to James Herbert, president of UNE, and offered my services to help bring parties in the community together so that the rancor could be reduced, and important work completed. If I can help the City of Biddeford complete the mission of a professional site survey, then I volunteer in the same spirit of collaboration with which I offered my assistance to President Herbert.

You can reach me by phone at 207-590-9614 or by email at cpendle5@gmail.com.

Sincerely,

Craig A. Pendleton

Craig A. Pendleton
81 Cascade Road
Old Orchard Beach, ME 04064

Tonight, we need to remove the passion from the conversation and focus on the technical and legal aspects of this proposal.

And based on these alone I would argue that you cannot approve this project.

15 part C The facility shall be no larger in dimension than necessary to carry on the activity and be consistent with the surrounding character and uses of the area

The site walk was helpful to appreciate the size and scale of this project. Speaking of scale, this site walk confirmed that the numerous regulatory requirements make this so massive it is no longer meet Sec 15c

I implore the University provide a scaled 3D computer rendering to demonstrate this. This will severe restrict movement in and around this area forever.

A 3D rendering will affirm if this is approved, this will be Biddeford's new MERC.

Sec 15 sec 10a When necessary, the removal of trees and other vegetation to allow for construction equipment access to the stabilization site via land must be limited to no more than 12 feet in width. When the stabilization project is complete, the construction equipment accessway must be restored.

The entrance will be a 20' road (not `12 per the law), combined with the turn around and the building as a backdrop will rip open the vegetation to a massive scale. Fire department requirements conflict with an ordinance, the ordinance-the law- still stands.

I also believe it's a violation of original the conditions of approval for the Marine Science Center.

Harry center who gave guidance to the board on the relevant technical sections of the shoreland zone. In addition to the technical areas they were provided, but there are other sections I want to bring to your attention.

Section 1. Purposes. [Ord. of 9-15-1998(4)]

The purposes of this ordinance are to:

to protect fish spawning grounds, aquatic life, bird and other wildlife habitat;

to protect commercial fishing and maritime industries; This project does not

help me as a Maine guide or any of the working fisher people. It will negatively impact us.

to conserve shore cover, and visual as well as actual points of access to inland and coastal waters; to conserve natural beauty and open space; We all use this area to access the river, the beach and the fish. How does this project conserve natural beauty and open space?

UNE by its own admission doesn't have or need the capacity this provides. They already have facilities that can be expanded. Where I come from, we focus on needs, not wants. UNE doesn't need it,, and we don't want it or need it.

Sec 7. Whenever a provision of this ordinance conflicts with or is inconsistent with another provision of this ordinance or of any other ordinance, regulation or statute administered by the City of Biddeford, the more restrictive provision shall control, except that where there are conflicts or inconsistencies between Section 12 (Nonconformance) of this ordinance and any other ordinance, regulation or statute administered by the City of Biddeford, Section 12 (Nonconformance) of this ordinance shall prevail.

This is the second part

In 2001 the SRCC imposed a 250 no build zone. Its important not only to recognize the requirement and that it relates to the ordnance conflicts provision of this ordinance. But let's understand the intent.

During the meeting at the SRCC where this was agreed in order to gain 50' height on the dormitories, in response, Sandra Featherman stated on the record that "the University has absolutely no intention to build within the 250 of the river, and that the city as well as the University believe the buffer the be very sensitive and necessary for the protection of the river."

The intent of UNE accepting this condition was clear. The SRCC reason was crystal clear as the minutes indicated. No more building in the 250 buffer zone period. No exceptions.

This project does not meet the purpose or intent of the shoreland zone and is in direct conflict with the SRCC and UNEs previously stated in intentions, and previous conditions of approval.

To the planning board, you are not responsible for the city administrations failure to guide UNE. Its not your Fault UNE overreached. Under article 10, section 1.b.3 It's your job only to review and approve, approve with conditions or disapprove. Based on the ordinance, based on the law, you must disapprove.

I submit these comments and the minutes from the SRCC from 2001 and 2017 for the record.

In UNE pier review, Biddeford planner puts heavy thumb on scale

MEDIA CONTACT: Kyle Noble, UNEPierReview@yahoo.com, 207-468-5296

(Biddeford, Maine) After the Biddeford City Council and Planning Board publicly scolded the city's planner for repeatedly pressuring them to approve development projects without full documentation, it has come to light that the planner personally tried to pave the way for approval of an application that the University of New England (UNE) has in front of the planning board.

(VIDEO, planner reprimanded by Biddeford Planning Board and City Council: https://youtu.be/-Kfno9gmvAY)

Galbraith discovered that a key agreement between the Biddeford Fire Department and UNE doesn't exist, so he tried to manufacture one.

On May 28, a Hills Beach resident had written, "The Board should request any evidence of a signed agreement between the City and UNE about hosting a fireboat. If one doesn't exist, the need isn't documented, and the pier is over-designed and too large by definition." On June 9, a planning board member asked Galbraith for a copy of the agreement. The next day Galbraith wrote to Biddeford's fire chief, "I would love to provide a letter to the Board" about an agreement between the fire department and UNE. (Email excerpts attached.)

"It is not the planner's job to write UNE's application for them," said Kyle Noble, a Biddeford resident and former city councilor. "He is way out of line. Begging the fire chief to manufacture a document is an insult to the intelligence and integrity of this board."

Coincidentally, discovery of the planner's appeal to the fire chief came after he wrote to the city attorney last week trying to limit the scope of planning board review. On Thursday he wrote that for UNE's proposed dock, a very large structure that would dominate the lower Saco River, the planning board must strictly avoid looking at tides, river depth, currents, silt build-up, and many other issues that typically affect any marine structure. "The Board may only base their decision on the specific criteria listed in the Site Plan and Shoreland Zoning laws as they specifically relate to Piers & Docks," he wrote.

Noble said area residents have faith in Biddeford's planning board members, despite efforts by other

government authorities to circumvent normal regulatory review and ignore public input.

“The general feeling is that the planning board members will successfully ward off all attempts by UNE and city staff to unfairly manipulate the process, as they have been trying to do all along. This board is capable of resisting maneuvers to short-circuit proper procedures,” he said.

The mooring owners are anything but anonymous. We have been very public. We are:

Tom Hatch, mooring #12, Bob Brackett, mooring #150, Gregg McPherson, mooring #138, William Mitchell, mooring #48, Captain Shawn Tibbetts, mooring #126, Mike Ramunno, mooring # 46, and Steve Goebeil, mooring number 248.

We are unified, and we're not moving. We submitted a signed Letter of Notice to the Planning Board on May 21, 2025, and we sent a letter to UNE president James Herbert on July 3, 2025.

The site on the Saco River that the Planning Board is looking at this evening is unavailable to UNE. That's a fact.

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Since so much time and effort has been invested to arrange tomorrow's site walk at UNE, it is crucially important that Biddeford's city planner verbally inform everyone who makes the effort to attend, at the start of the meeting, that the viewing party will be looking out on a site on the river that is unavailable to UNE for building a pier. Thank you in advance for being fully transparent about this.

FACTS:

1. UNE has proposed a pier in a location that is unavailable to them. Other mariners are already legally moored in that spot, and have been for many years.

2. The current mooring holders categorically reject UNE's offer to pay for our relocation.

SUPPORTING INFORMATION IN DOCUMENTS:

1. Al Thibeault, memo June 11, 2025: "The Biddeford Mooring Permit Application clearly states 'The location is subject to change at any time **at the discretion of Harbor Master** or Deputy…'"

2. Biddeford Harbormaster, email to mooring holders, April 12, 2025: "Several mooring owners in the lower part of the Saco River have recently expressed concerns to me about the imminent removal or relocation of their mooring. You may have a similar concern. I am writing to let you know that, as Harbormaster, I have no plans to remove or relocate any existing mooring."

3. Mooring owners, letter to UNE president James Herbert, July 7, 2025: "We are the local mooring owners. We will all be affected by your proposed pier location, and two of us sit directly *on* your coveted location. *None of us are moving*."

Subject: Media update after yesterday's UNE pier site walk
Attachments: Put Pier Here Composite.jpg

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

- Regulatory review of UNE's proposed marine sciences research pier on the lower Saco River continued yesterday, Wednesday, July 9, 2025. The site walk began at 5:00 p.m. and was a repeat of the June 9 site walk, which Biddeford's city planner had scheduled despite knowing that three planning board members could not attend.
- The planner did not attend the site walk last night. His absence came after Tuesday's press announcement revealing his hasty attempt last month to persuade the planning board that some of some sort of official agreement was in place between the Biddeford Fire Department and UNE. (No such agreement exists.)
- Photo attached. In advance of the site walk, residents erected a sign on public land at the low tide mark. Text on the sign read, "PUT THE PIER HERE, LESS IMPACT ON THE MOORING FIELD AND NAVIGATION."
- The sign was in the suggested alternative location that Biddeford's harbormaster recommends for the pier. (The harbormaster is under orders from the City to remain silent about UNE's application.)
- The sign is in the general location UNE's attorney Ron Schneider claimed has no deep water, and therefore a pier there "would sit in water too shallow to use." Schneider made his false declaration while threatening to sue the City of Biddeford.
- During the site walk last night, Schneider ordered the former chairman of Biddeford's Harbor Commission to tell whoever put the sign up to remove it.
- The sign, however, was not on UNE's property.
- The sign was in the general location GEI Consultants described in a memo to UNE that directly contradicts Schneider. GEI is UNE's hired consultant. On November 28, 2023 they wrote, "The suggested alternative location does have greater depth at the main berth, approximately 11 to 12 feet at MLLW."
- Last week the city planner instructed the planning board that, in reaching a decision, it cannot consider factors like water depth, current, tides, other moorings, ice flow, etc.
- Even at this late stage of regulatory review, no certified Harbormaster has reviewed or approved UNE's application.

The Biddeford Planning Board meets next Wednesday, July 16, to continue its deliberations on UNE's application. The meeting will be at 6:00 p.m. at Biddeford City Hall.

PLANNING BOARD STAFF REPORT

TO: Chair Plotkin and Members of the Biddeford Planning Board

FROM: David C.M. Galbraith, Deputy Director/City Planner

DATE: July 28, 2025

RE: 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.

MEETING DATE: August 6, 2025, at 6:00 PM

1. REVIEW HISTORY:

The subject application has had the following hearings/meetings:

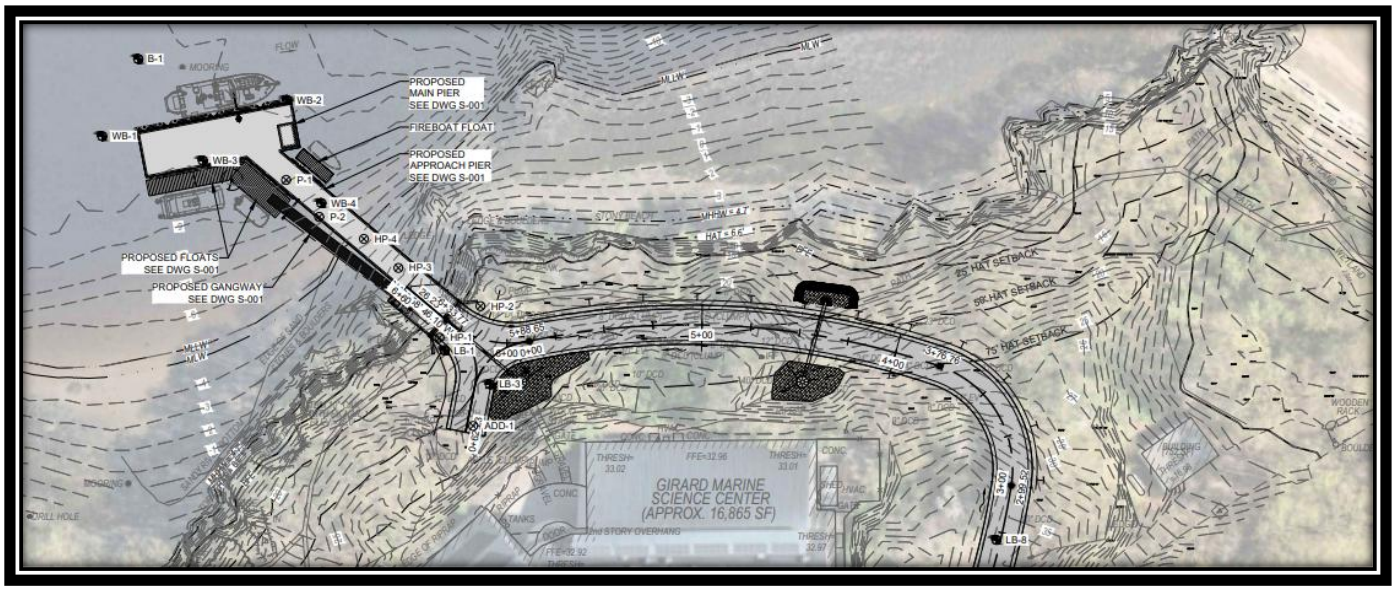
Planning Board Review History:
Sketch Plan Review - May 21, 2025;
Site Walk June 9, 2025;
Preliminary Review (Tabled)- June 18, 2025;
Site Walk #2 – July 9, 2025;
Preliminary Review (#2) – July 16, 2025 – Preliminary Approval and Waivers approved.
Final Plan Review – August 6, 2025.

This project was last discussed during the July 16, 2025, Planning Board meeting where the project was granted preliminary plan approval. During the same hearing the Applicant requested four (4) waivers which were also granted by the Board. The requested / granted waivers are outlined below:

Waivers Requested / Granted:

A. Article XI.II. Section 5.B.1.a. (post development runoff)
B. Article XI.II. Section 5.B.1.e.3. (Slopes steeper than 2:1 in ledge).
C. Article VI. Section 26.F.: (cut or fill slopes that exceed 3 horizontals to 1 vertical).
D. Article XIV. Section 15.H.4. (Road and driveway banks shall be no steeper than a slope of 2 horizontal to 1 vertical).

The Site Plan and Shoreland Zoning approval and the four (4) requested waivers were approved by a 3-2 vote by the Board with members Plotkin, Patoine and Deschambault voting in the affirmative and two (2) members voting in the negative (Angers and Dubois).



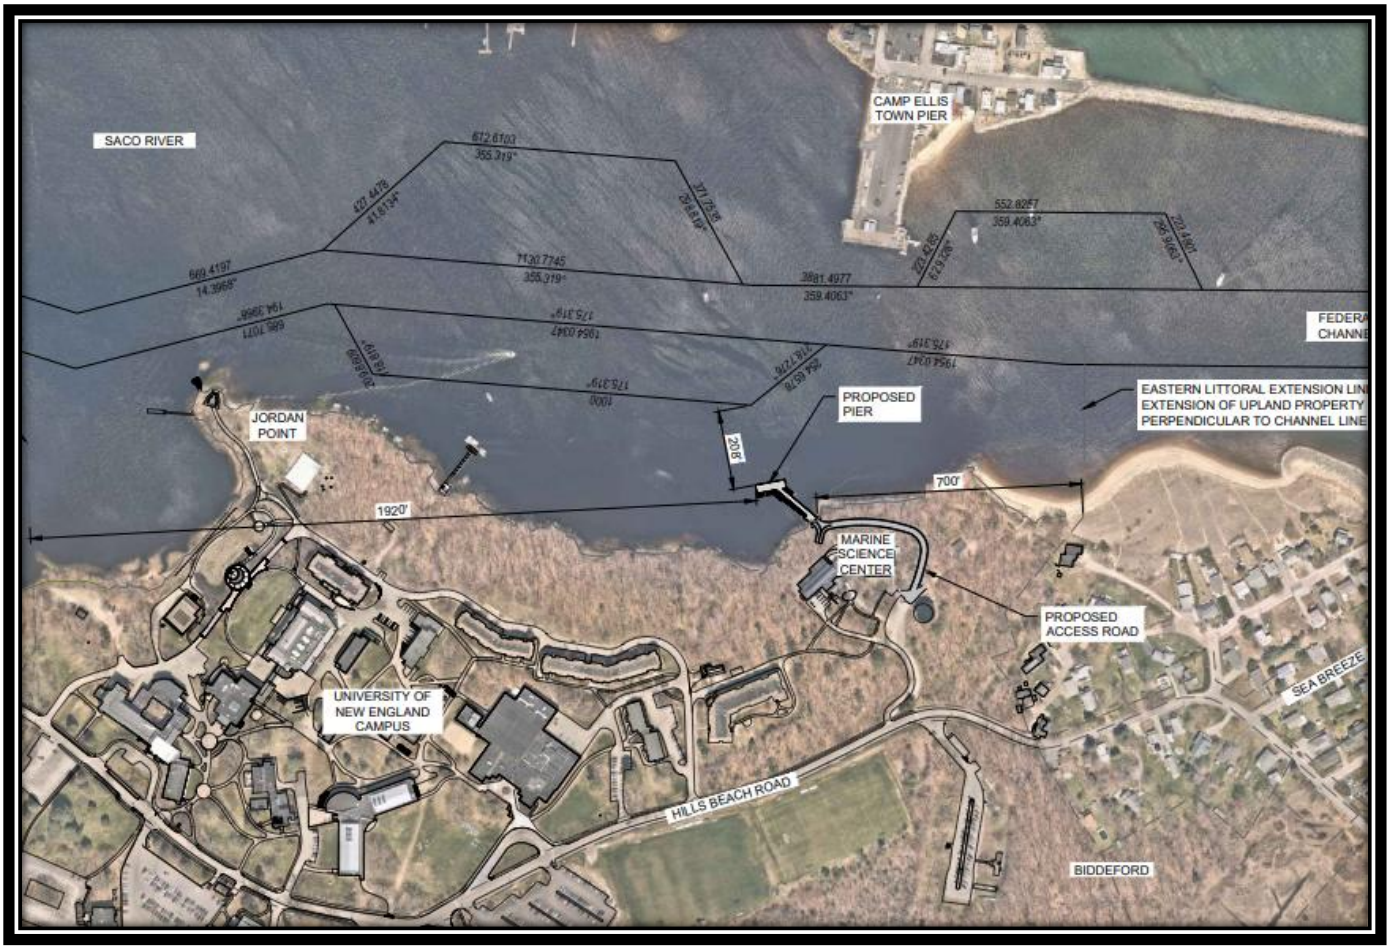
The application before the Planning Board is a request for Final Plan Approval.

RE: Case # 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.

MEETING DATE: August 6, 2025, at 6:00 PM

2. INTRODUCTION

Tom Saucier, PE of Site Design Associates, is representing the University of New England (UNE) who is applying for Final Site Plan Review within the Shoreland Zoning District. The University of New England (UNE) proposes to construct a new pier on the Saco River adjacent to the Girard Marine Science Center (GMSC) to support research and educational programming. The project has been in development for more than 10 years and has gone through extensive planning and alternatives analysis in achieving the design that is being proposed.

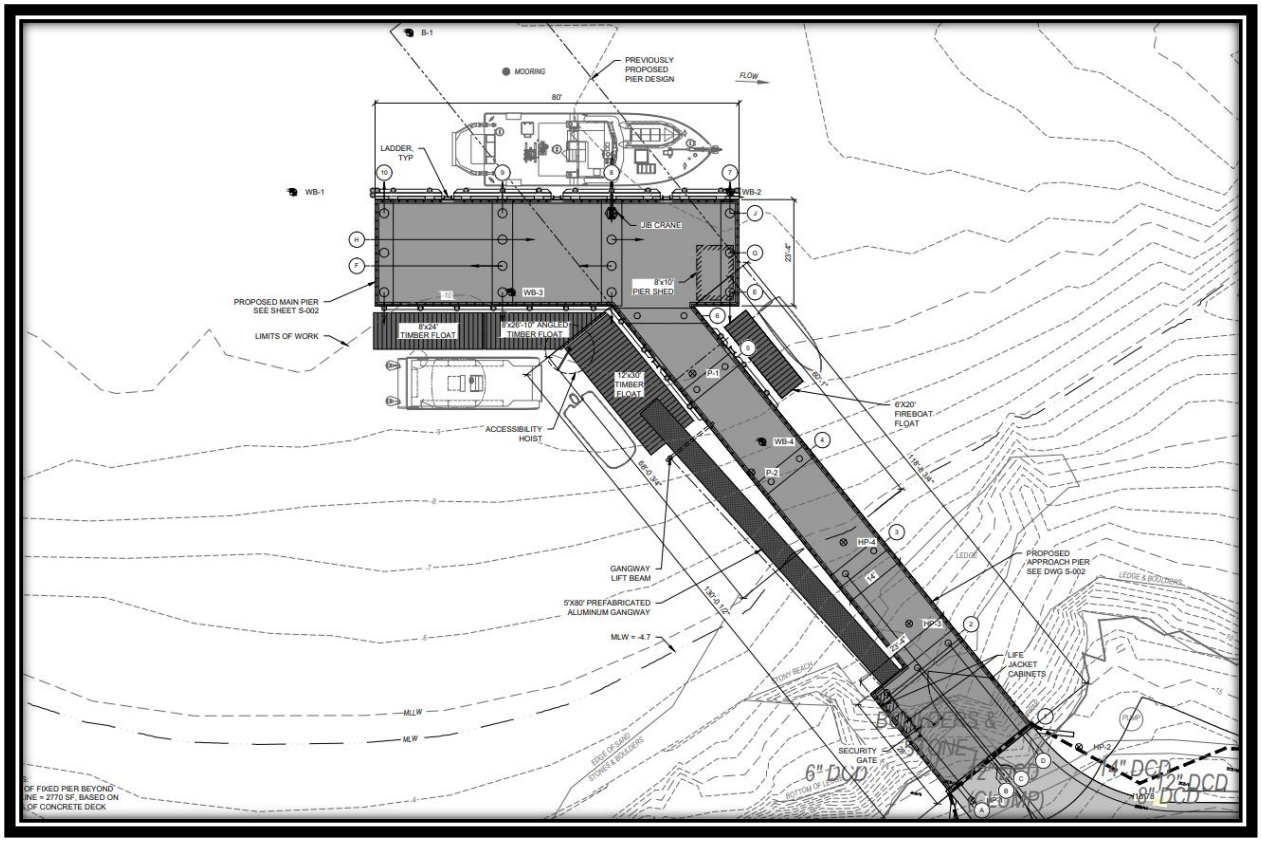


Proposed Marine Science Center Research Pier

It should be noted that the Planning Department received the formal application for this project on April 16, 2025. However, the case # that was assigned to this project was in 2024 (Case # 2024.34) as that is when the Planning Department started receiving comments from the public on this application (prior to application submittal), and Staff wanted to make certain that any and all correspondence related to this matter be saved within the public record for complete transparency. These submitted emails / letters have been consistently forwarded to the Planning Board and the University New England and have been maintained by the Planning Department.

RE: Case # 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.

MEETING DATE: August 6, 2025, at 6:00 PM



University of New England (UNE) – proposed Marine Science Center Research Pier

The University of New England (UNE) campus is located along the Saco River in Biddeford, ME. The Marine Science Center is located on the waterfront at the easterly end of campus approximately opposite Camp Ellis in Saco. To support MSC research activities, UNE proposes to construct a pier from the shore adjacent to the MSC into the Saco River to provide an all-tide access facility for small and shallow draft vessels (skiffs, landing craft, up to approximately 3-foot draft), with tidally-restricted access for larger vessels.

RE: Case # 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.

MEETING DATE: August 6, 2025, at 6:00 PM

Marine Science Center Research Pier Detail

The proposed facility includes the following:

1. A pile supported pier structure extending from shore into the Saco River. The proposed pier includes an approximately 130-foot-long approach section extending from shore and an 80-foot-long pier head section oriented roughly parallel to the direction of flow in the river. The pier consists of a concrete superstructure on steel pipe piles, with timber fender piles for vessel berthing and floating docks, and a pile supported gangway lifting beam to allow the gangway ramp to be temporarily removed from the water. Site 7 (Preferred) Stormwater Management Report UNE Marine Science Center Pier September 2023, Revision B. April 2025 GEI Consultants, Inc.

2. A floating dock system consisting of one 8-foot by 24-foot float, one 8-foot by 26- foot 10-inch float, and one 12-foot by 30-foot gangway landing float to provide alltide vessel access for UNE's vessels on the west side of the pier, and a single 6-foot by 20-foot floating dock to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.

3. An 80-foot by 5-foot gangway, to provide ADA compliant access to the float system.

4. An upland access road connecting the existing road at the MSC to the proposed pier, including associated site grading, drainage, and stormwater management features.

RE: Case # 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.

MEETING DATE: August 6, 2025, at 6:00 PM

These proposed improvements will result in a total increase in the impervious area totaling 0.249 acres. The increase in the impervious area will be managed by the two bioretention filter cells to the north of the Girard Marine Science Center. Runoff will be conveyed to the bioretention filter cells via proposed vegetated swales along the low side of the superelevated access road. The bioretention filter cells will slowly release captured stormwater via underground pipe into the Saco River/Atlantic Ocean.

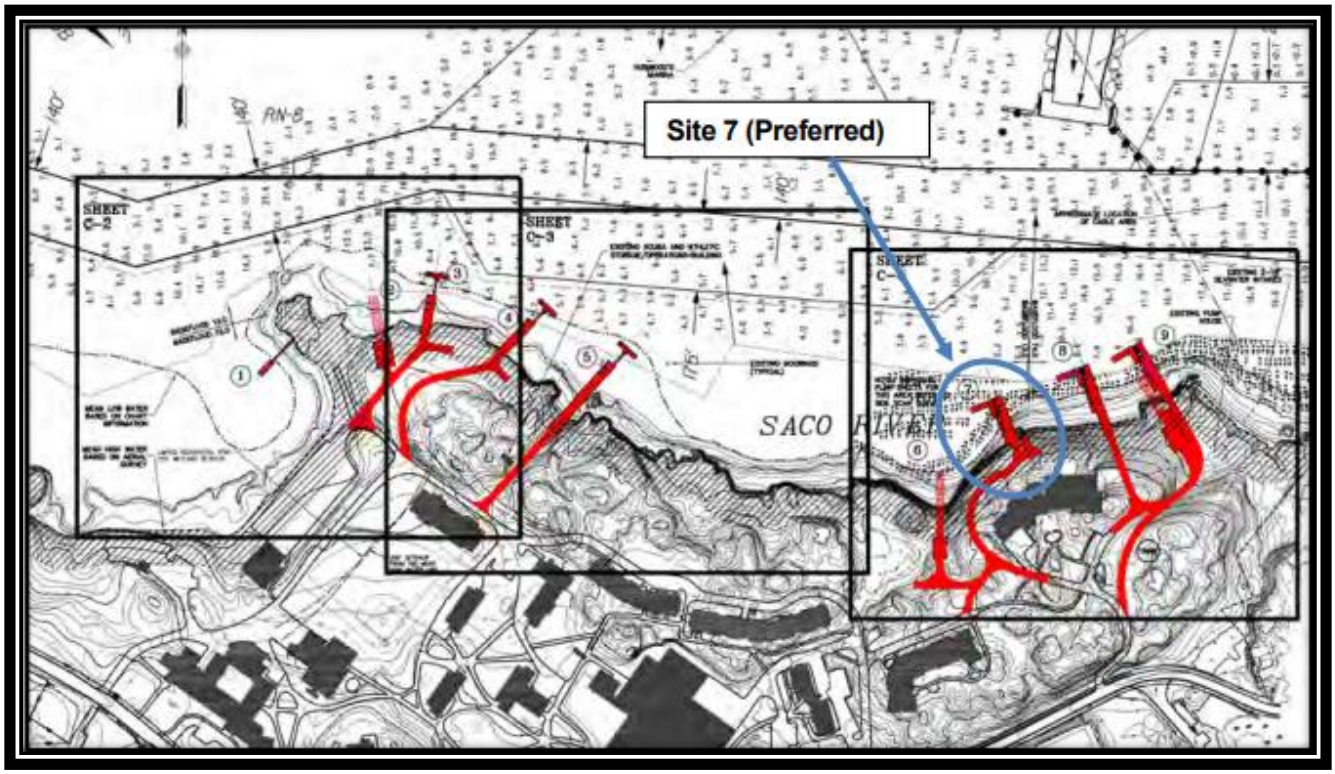


Fig. 1 – Alternative Sites Evaluated in 2008-2010 Study

As outlined in their project narrative, multiple locations for the pier were evaluated Alternative locations *"for more than 10 years and has gone through extensive planning and alternatives analysis in arriving at the design that is proposed"*.

The University's consultants (Daniel Bannon, P.E., CFM and Barney Baker, P.E. of GEI Consultants) evaluated alternate pier locations and concluded that:

> *"GEI has reviewed the concerns raised by the Saco and Biddeford Harbormasters and evaluated their impact on the proposed design, reviewed the history of planning that led to the current design location and layout, and reviewed the potential advantages and disadvantages offered by the suggested alternative pier location. <u>While we respectfully value the input and suggestions for an alternative layout, it is our opinion that the proposed design represents the preferred balance of project requirements and site constraints. Compared to the suggested alternative, the proposed design achieves adequate water depth, provides safe navigation, results in a structure of smaller overall dimensions with less coastal wetland impact, does not appear to be subject to significant sediment deposition, and locates the pier in a location that is</u>*

*less exposed to current and icing impacts. For these reasons, GEI recommends that the current design and pier location be maintained" (*Note: Emphasis added).*

After completing the pier feasibility study and identifying Site 7 as the preferred pier location, UNE undertook additional effort in 2015-2016 to study alternative pier layouts that would address the functional and vessel needs of the marine science curriculum as well as the site exposure, berthing conditions, access requirements, and associated site impacts. During this work, numerous alternative pier layouts were considered. Alternate locations evaluated water depth, exposure to currents, location relative to river sediment deposition, exposure to icing, and impacts to moorings.

3. PROJECT DATA/INFORMATION

1.	Applicant:	University of New England 11 Hills Beach Road Biddeford, ME
2.	Owner of Property:	University of New England 11 Hills Beach Road Biddeford, ME
3.	Agent:	Tom Saucier, P.E. Site Design Associates 23 Whitney Way Topsham, ME 04086
4.	Surveyor:	Tom Saucier, P.E. Site Design Associates 23 Whitney Way Topsham, ME 04086
5.	Project Location:	11 Hills Beach Road
6.	Project Tax Map #/Lot #:	Tax Map 52 Lot 4
7.	Lot Size:	49.9-acres
8.	Base Zoning:	Institutional (IN)
9.	Overlay Zoning:	Shoreland Zoning
10.	Existing Use:	Saco River
11.	Proposed Use:	Marine Research Pier
12.	Approvals Required:	Site Plan and Shoreland Review
13.	Uses in the Vicinity:	University
14.	Waivers Requested:	E. **Article XI.II. Section 5.B.1.a.** (post development runoff) F. **Article XI.II. Section 5.B.1.e.3.** (Slopes steeper than 2:1 in ledge). G. **Article VI. Section 26.F.: (**cut or fill slopes that exceed 3 horizontals to 1 vertical). H. **Article XIV. Section 15.H.4. (**Road and driveway banks shall be no steeper than a slope of 2 horizontal to 1 vertical).

18.	Waivers Granted on July 16, 2025.	A. **Article XI.II. Section 5.B.1.a.** (post development runoff) B. **Article XI.II. Section 5.B.1.e.3.** (Slopes steeper than 2:1 in ledge). C. **Article VI. Section 26.F.: (**cut or fill slopes that exceed 3 horizontals to 1 vertical). D. **Article XIV. Section 15.H.4. (**Road and driveway banks shall be no steeper than a slope of 2 horizontal to 1 vertical).
22.	Other Non-City Permits Required:	N/A
23.	LDR Attachment A: Fees Paid:	Yes
25.	Planning Board Review History: Sketch Plan Review - May 21, 2025; Site Walk June 9, 2025; Preliminary Review (Tabled)- June 18, 2025; Site Walk #2 – July 9, 2025; Preliminary Review (#2) – July 16, 2025 – Preliminary Approval and Waivers approved. Final Plan Review – August 6, 2025.	

4. REVIEW PROCESS

Per City ordinance, this application is subject to Site Plan (Land Development Regulations, Article XI) review and Shoreland Zoning approval by the Planning Board. Below is a list of required agency reviews.

- Saco River Corridor Commission (SRCC) – Approval 9-13-2024 Attached pages # 282-287 of the Applicants application.
- Department of Environmental Protection (MDEP), Findings of Fact (FOF) and Order Pages # 288-295, dated April 11, 2025, of the Applicants application.
- U.S. Army Corps of Engineers, New England District, approval dated March 28, 2025. Pages # 296-298 of the Applicants application.
- Maine Historic Preservation Commission, Approval dated May 15, 2023.
- City of Biddeford letter from Former City Manager (James Bennett) regarding a "Notice to Proceed with External Reviews" / compliance with City Code 74-35, subsections (c) items 1-10, dated August 19, 2025, Pages #302-303 of the Applicants application.

5. SITE PLAN APPROVAL / SITE DESIGN CRITERIA:

Below are the specific Site Review Criteria from the City of Biddeford's Code of Ordinances, Part III Land Development Regulations - Article XI Site Plan Review - Section 5 Site design and development criteria:

Site design criteria. The design standards presented here are minimum in nature; the applicant may provide further details to the presented plan. At the same time, some of these standards may not apply to a specific project; the applicant may request in writing waivers from any point following. All waivers must be added as notes to the approved plan and shall be considered conditions of approval.

Besides, the following standards projects presented under this article shall be subject to the performance standards specified in Article VI of this ordinance (Note: Article VI does not contain any additional performance standards for "piers or docks").

1. Drainage.
   a. The rate of post-development runoff shall not exceed that of predevelopment. Details of catch basins, drainage pipes and retention/detention ponds shall be provided as needed with the application. All detail sheets shall bear the seal and signature of a professional engineer, licensed in the State of Maine.

   b. A written engineering report describing the impacted watershed area, projected runoff, and any projected downstream impact shall be required.

   c. Drainage easements shall be established for any concentrated off-site drainage. Such easement shall state who has the responsibility to maintain the easement. Easement documents shall be reviewed, at applicant expense, by the Director of Public Works, City Engineer, and the City Solicitor, as to exactness of content. Plans shall include the location of easements.

   d. Where it is determined by the City Engineer or consultant hired by the Board, that the additional runoff incident to the development of the projected site will overload an existing downstream drainage facility, the Board may require the provision of water-retarding facilities or other improvements to alleviate said problem.

   e. Development in specific areas of concern shall provide detailed information and address specific issues in relation to drainage:

1. Parcels situated within the federally designated flood hazard zone, as per Flood Hazard Boundary Map H01-18, dated May, 1984, as amended, shall comply with all applicable federal regulations relating thereto.

2. One-hundred-year flood elevation line shall be included where applicable.

3. No slope shall be created which results in a slope of more than two feet horizontal to one foot vertical unless proper retaining walls are proposed.

f. Drainage improvements shall be scheduled to be constructed as part of the first portion of any project where drainage improvements are proposed.

g. Special bonding of 1 1/2 times the anticipated cost of said improvements shall be incorporated by the developer to insure that improvements are placed and that they function as planned. No portion of this special bond may be released until the project, or that portion of the project for which the drainage improvement is proposed has been constructed, and until so released by the Planning Board, with the recommendation from the Director of Public Works and the City Engineer.

Applicants' Comments: *A Stormwater Management Report is attached. The report submitted demonstrates compliance with Maine Department of Environmental Protection (DEP) Basic and General standards. The project will include bioretention filters designed to DEP BMP standards for enhancement of stormwater runoff quality.*

Staff Comment: *The above standards have / are being met, as the project complies with the Maine Department of Environmental Protection (DEP) Basic and General standards and permits from the agency*.

2. Utilities.

a. All utilities, including electric, gas, water/sewer, shall be shown on the plat, and separate detail sheets as needed.

b. Accessways, storage, and parking areas shall be graded and improved with pavements, curbs, gutters, sidewalks, storm drainage facilities, outdoor lighting, etc.

c. All accessways/drives and service ways shall be of sufficient width and configuration to accommodate the prospective traffic and to afford satisfactory access to police, firefighting and other such service.

d. Any proposal within 200 feet of a public water or sewer line(s) must connect to system(s). Applicant must supply copies of letters from the environmental specialist of the City of Biddeford for sewer, and water company shall confirm details of connection and/or concerns.

e. Whether or not a municipal water system is proposed, the following items must be specified in application narrative and on plat:

1. Rated normal capacity and gallons per minute at prime use time.

2. Rated maximum capacity and gallons per minute at prime use time.

3. Residual pressure of proposed tap line.

f. Where nondomestic sanitary discharge (any discharge into the public sewer system containing other than normal household wastes) is anticipated, such effluent shall be identified and comply with any and all federal, state, and local laws, ordinances, rules, and regulations. Where any such laws, ordinances, rules and regulations may overlap or may be inconsistent, the more stringent shall apply.

g. Where public sanitary service is available, or where developers must extend such service, applicants must apply for and receive a discharge permit from the City Council of the City of Biddeford prior to approval by the Planning Board.

h. Where practicable, all electrical and telephone utilities shall be placed underground.

Staff Comment: *Power will be fed underground to the pier from the Girard Marine Science Center.* ***The proposed utilities address and meet this standard****.*

3. Parking.

a. A parking plan shall delineate the number of parking and delivery or loading spaces and the physical arrangement. Details of parking plan shall conform to the provisions of the off-street parking section of Article VI of this Zoning Ordinance.

b. No on-street parking, delivery or loading is permitted, except where specifically allowed by the Planning Board.

c. Whenever a use existing on the effective date of these regulations is changed thereafter to a new use, parking facilities and access shall be provided as required herein for such new uses.

d. In the case of multifamily projects the number of required parking spaces should be increased 5% to allow for visitor parking.

e. Parking lots shall be landscaped and/or screened to provide for a pleasing visual effect and blending in with the surrounding area.

f. Lots shall be illuminated for security purposes. The lighting shall be designed in such a way that off-site glare is minimized.

g. Adequate space shall be allowed for the accumulation of snow during the winter plowing months.

Staff Comment: *The Girard Marine Science Center provides adequate parking for the associated / "accessory structure (pier)" as the students and faculty of Science Center will be the same users of the proposed pier.* ***The application meets this standard****.*

4. Structural layout and design. All proposed structures or additions to existing structures shall address the following items:

a. Design of buildings.

1. Buildings shall be designed to blend harmoniously with the surrounding structures in the neighborhood. New structures should be designed so as to complement the style of the abutting

older structures. A photograph, architectural rendering or other representation of the proposed structure must accompany the application for site review.

2. In the I-3 Zone structures shall have a facade sheath in brick or other masonry finish. Other facade finishes may be used when it can be clearly shown to the board that such facing material will advance the City's intent to make the I-3 area a more attractive gateway to the City.

Staff Comment: *No buildings are being proposed with the exception of the small storage shed located on the proposed pier. The project is also not located within the I-3 area so brick and / or masonry standards do not apply.*

b. Setbacks. Proposed structures shall be set back from roadways, in conformance with requirements for the particular zone; and shall be set in such a way as to blend in harmoniously with buildings on abutting properties, and to allow for adequate landscaping of the front yard.

Staff Comment: *The research pier is sited in conformance with all setback requirements. The proposed pier meets all setbacks.*

c. Fire protection.

1. All proposed structures and additions to existing buildings must be designed to meet existing fire protection standards.

2. Fire hydrants and fire escapes must be clearly presented on plats.

3. Clear ways around buildings must be maintained to provide for 360° access to structures.

4. Areas in front of structures must be kept clear of parking spaces to allow for emergency access.

5. Buildings should be designed with internal sprinkler systems. This is particularly the case in terms of multifamily and industrial/warehousing structures, and structures that will be located in areas that are far or difficult to reach from fire stations.

6. In residential developments of 24 units or more, or buildings of 5,000 square feet or more, a central alarm system to the central fire station shall be installed, unless a negative recommendation, in writing, is received from the Fire Marshal.

7. In residential developments of 24 dwelling units or more, or office buildings with more than two separate establishments or places of business, a "knock box" shall be provided and indicated on plat. This box shall be in accordance with the specifications and standards as prescribed by the Fire Department of the City of Biddeford.

8. Whenever gas, either natural or propane or other type, is proposed to be used on-site, a separate external shutoff valve shall be provided for each building on the site. The valve location shall be indicated on the plat and approved in writing by the fire chief/fire marshal.

Staff Comment: *Based on input from the fire department, the road width was increased to 20 ft per NFPA standards. The turnaround meets the city required dimensional standards and has been modelled to accommodate fire apparatus. The only concern raised to date is the Fire Departments turn-around at the head of the pier. The Applicants have agreed that once constructed the BFD will bring their larges apparatus to the side to verify that the turn-around constructed meets the BFD needs. If the turn-around needs to be modified, the BFD will require minor adjustments to the turn-around to the satisfaction of the Fire Chief. A condition has been added to the recommended Conditions of Approval (COA).*

d. Landscaping.

1. All sites must be landscaped with vegetation that will act to:
   (a) Reduce the impact of lighting, vehicular and structural, on abutting properties;

   (b) Reduce the impact of proposed structures on the privacy of abutters;

   (c) Make the site more attractive to the average viewer.

2. Landscaping measures will be indicated on the plat by drawings and narrative note. The use of trees and shrubs for fencing and shading is strongly encouraged. Care must be taken to ensure that tree, etc., are placed in such a fashion that in time they will cause minimum impact on abutting properties and public roadways and travelways, particularly as they grow.

3. Whenever possible existing vegetation shall be preserved and incorporated into the landscaping scheme of the project.

4. Each proposal will include a detailed landscaping plan. This plan will include the location, type and size of existing mature trees (those trees over eight inches in diameter).

5. Particular attention should be paid to offsetting the visual impact of new structures in areas where there may be a stark contrast with the existing design trend of the neighborhood.

Staff Comment:

The revegetation plan has been developed to meet the City of Biddeford's Shoreland Zoning requirements as well as to preserve a visual buffer for the access drive to minimize visibility from the water to the greatest extent possible, while achieving the required clearing and considering functional requirements such as snow plowing at the turnaround. The revegetation plan also meets the requirements of the Saco River Corridor Commission (SRCC) who issued a permit for the project.

Staff Comment: *Revegetation Plan: The revegetation plan, drawing C-15, is intended to meet the city of Biddeford's shoreland zoning requirements.*
Details are as follows:

- *49 trees are being removed with 21 of those within the 50-foot HAT setback*
- *Approximately 5,850 SF of understory duff later and low growth vegetation (predominantly non-native invasive honeysuckle) is being disturbed within 50 feet of the HAT.*
- *5 tree species are proposed in approximate equal quantities with the evergreen trees located between the road shoulder grading and the top of embankment where they are anticipated to fit under the remaining mature forest canopy, and between existing trees and ledge. Field verification during construction will be required to ensure final plant locations are feasible if shallow ledge or significant remaining tree root stock is present.*
- *3 shrubs (2 evergreen and 1 deciduous) are proposed to plant at the toe of the road embankment as well as in areas around the turnaround where fitting larger trees will be challenging given limited space and the need to maintain an area for plowed snow.*
- *Deciduous trees are spread throughout the area.*
- *The bioretention cells will be filled with a mix of wet, drought and salt tolerant shrubs and perennials which are shown on the plan as a hatched area. The notes on the plan and drawing C-16 plant schedule describe the random pattern mixing of these plants throughout the bio retention cells.*
- *All other disturbed areas will be planted with a native roadside mix of perennial grasses and flowers. It is recommended that this area be mowed once a year in the fall to maintain the mix of plants. If mowed more often, it will revert to mostly lawn grasses. • Mature plant sizes are listed on the plant list to give a sense of the amount of screening that may occur over time.*
- *The applicants are proposing the removal of invasive plant species and a complete replanting of the disturbed areas with native Maine species which Staff believes meet the above standards*

***The proposed development meets these standards**.*

e. Service, storage and utility areas.

1. All service, storage, and utility areas shall be designed to the side or rear yard of a proposed or existing building or structure, and such areas shall be appropriately screened/buffered by walls, fences, earth berms, or vegetation.

2. Proposed utility elements shall be adequately screened; and, if producing sound, baffled upon Planning Board request.

3. Trash receptacles, dumpsters, storage sheds, etc., shall be shown on plat.

***Staff Comment:** The research pier includes a small storage shed for equipment associated with the pier. The pier storage is the only storage / service area. The proposed storage / utility areas are minimal in size but are large enough to accommodate the storage needs of pier related activities.*

f. Paving, parking, and storage areas.

1. No paving, parking, or storage shall be permitted within the required setback of any side or rear property line;

2. No paving, parking, or storage (except for entrances/exits) shall be permitted within 25 feet of any front property line. These unpaved nonparking or nonstorage areas shall be maintained as landscaped areas or open spaces.

***Staff Comment:** No parking is being planned for the proposed pier. This standard is not applicable.*

g. Handicapped accessibility.

1. Pedestrian walkways, entrances and exits designed for use by the handicapped shall be provided as required by any and all federal, state, or local laws, ordinances, rules and regulations or as requested by the Planning Board.

2. Handicapped parking spaces and accessways shall be indicated on plat whenever they are to be employed.

Staff Comment: *The proposed research pier is handicapped accessible. The project meets this standard.*

h. Loading facilities.

1. Loading facilities for new structures shall be designed to the rear or side of any and all proposed or existing building or structure.

2. Loading facilities shall be designed in accordance with the applicable federal, state, or local laws, ordinances, codes, rules and regulations and shall be off-street or accessible via a public street.

Staff Comment: *No loading areas are being proposed as part of the pier project. This standard does not apply.*

i. Parking, loading, and protective buffers.

1. All parking, loading and protective buffers shall be situated on the same tract or parcel of land as the primary use building or structure.

2. The maximum nonvegetated area of the land area being developed and reviewed shall be 75%.

3. Any parking or paving, including all access ways, egress ways, entrances and exits on streets for both pedestrian and vehicular use, shall not cover or occupy more than 30% of the land area being developed and reviewed and shall be included with the maximum nonvegetated area.

4. In all applications, a minimum of 25% of the land area being developed and reviewed shall remain in its natural state or shall be maintained as appropriately landscaped area.

5. All buildings or structures shall be sited in conformance with established setbacks of the particular zone. No building or structure may be built within the required side yard setback. The Planning Board may require greater setbacks in areas such as turnpikes, water bodies, railroads, etc.

6. All buffered or screened areas shall be densely planted with shrubs or trees which are respectively at least two or three feet high at the time of planting and are of a type which may be expected to form a year-round dense screen of at least five feet high within three years, provided that such screening shall not obstruct the view of oncoming traffic when entering or exiting the site. An additional cash bond to cover the cost of replacement of these plantings may be required. The term of the bond shall be equal to three years from the time of planting. At the end of the three years any unused portion of this security will be returned to the applicant along with accrued interest.

Staff Comment: *The proposed development does not include new parking areas. The non-vegetated area of the land being developed will be less than 75% and a minimum of 25% of the land area being developed either remains in its natural state or consists of landscape and lawn areas. New landscaping is being proposed in all areas being disturbed by the pier construction as discussed within this document and Applicants development plans. The project meets this standard.*

j. Open space.

1. In new residential developments: Open space shall be provided in the ratio of 1,000 square feet for each dwelling unit. This open space shall be identified as either a "green space" or as "recreational space."

2. Whenever practicable, open space in a residential development shall include a mixture of active and passive recreational opportunities to benefit the various residents of the project. Such opportunities would include, but are not limited to, ball and other playing fields, tennis courts, etc.
3. In large-scale projects hiking trails or nature paths are encouraged.

4. In projects that abut rivers or streams a public easement is encouraged, to provide access to a limited natural resource.

5. The plan shall reflect the natural capabilities of the site to support development. Buildings, lots, and support facilities will be clustered in those portions of the site that have the most suitable conditions for development. Environmentally sensitive areas, including but not limited to wetlands, steep slopes, floodplains, significant wildlife habitats, fisheries, scenic areas, habitat for rare and endangered plants and animals, unique natural communities and natural areas, and sand and gravel aquifers will be maintained and preserved to the maximum extent. The development shall include appropriate measures for protecting these resources, including but not limited to modification of the proposed design of the site, timing of construction, and limiting the extent of excavation.

Staff Comment: *The proposed development does not include any residential uses but has been designed around the natural environment. Areas of disturbance will be replanted with natural Maine species and graded to support the proposed pier and it's access. The project meets the above standards.*

k. External lighting.

1. All existing/proposed external lighting must be included on plat. Lighting will be described as needed.

2. Lighting shall be designed to provide adequate illumination on-site, especially in parking areas, walkways and structural entrances, and site entrance from roadways. At the same time all illumination will be designed to mitigate adverse impact on abutting properties and structures, and traffic.

Staff Comment: *An electrical site plan is included in the drawing set which shows the site lighting. Full cut off fixtures will be utilized, and lighting will be the minimum necessary for safety and functionality. The project meets these standards.*

l. Signs.

1. All proposed signs shall meet standards provided in Article VI of the Zoning Ordinance of the City of Biddeford.

2. Signs shall be indicated on plat.

3. A detail of sign design shall be submitted as part of the application for site review.

Staff Comment: *No new signage is being proposed for this project. Any proposed signs shall meet the City's Sign Ordinance.*

m. Historic and archaeological resources. If any portion of the site has been identified as containing historic or archaeological resources, the development shall include appropriate measures for protecting these resources, including but not limited to modification of the proposed design of the site, timing of construction, and limiting the extent of construction.

Staff Comment: *See attachment 10 for a letter from the Maine Historic Preservation Commission clearing the project. The proposed development meets this standard.*

6. **Shoreland Zoning Land Use Standards:** In addition to the Site Plan Approval / Site Design Criteria outlined above, the project is required to comply with the applicable standards of Article XIV. Section 15.C. which are listed below:

15 C. Piers, docks, wharfs, bridges and other structures and uses extending over or below the normal high-water line of a water body or within a wetland.

1. Except as provided in Section 15C11 and Section 15X7, no more than one pier, dock, wharf or similar structure extending or located below the normal high-water line of a water body or within a wetland is allowed on a single residential lot; except that when a single lot contains at least twice the minimum shore frontage as specified in Section 15A, a second structure may be allowed and may remain as long as the lot is not further divided.

Staff Comment: Standard not applicable

2. *Access from shore shall be developed on soils appropriate for such use and constructed so as to control erosion*.

Staff Comment: *Access from shore will be developed on soils appropriate for the use. A detailed erosion control plan has been prepared for the project. The proposal meets this standard.*

3. The location shall not interfere with existing developed or natural beach areas.

Staff Comment: *The proposal does not interfere with existing developed or natural beach areas. The application meets this standard.*

4. The facility shall be located so as to minimize adverse effects on fisheries.

Staff Comment: *The facility has been located to minimize adverse effects on fisheries. The plan was reviewed by the National Marine Fisheries Service. The application meets this standard.*

5. The facility shall be no larger in dimension than necessary to carry on with the activity and be consistent with the surrounding character and uses of the area. A temporary pier, dock, or wharf in non-tidal waters shall not be wider than six feet for non-commercial uses.

Applicant Comment: *The facility size is the minimum necessary to carry out current and future research activities and is consistent with the surrounding character and uses of the area, including the Camp Ellis pier on the opposite side of the river.*

Staff Comment: *The proposed project meets this standard.*

6. No new structure shall be built on, over or abutting a pier, wharf, dock or other structure extending beyond the normal high-water line of a water body or within a wetland unless the structure requires direct access to the water body or wetland as an operational necessity.

Staff Comment: *Standard not applicable*

7. New permanent piers and docks on nontidal waters shall not be permitted unless it is clearly demonstrated to the Planning Board that a temporary pier or dock is not feasible, and a permit has been obtained from the Department of Environmental Protection, pursuant to the Natural Resources Protection Act.

Staff Comment: *A temporary pier / dock at this location at this location is not feasible for the proposed use. The Applicant has obtained approval from the Department of Environmental Protection (DEP).*

8. No existing structures built on, over or abutting a pier, dock, wharf or other structure extending beyond the normal high-water line of a water body or within a wetland shall be converted to residential dwelling units in any district.

Staff Comment: *Standard not applicable*

9. Except in the General Development District, structures built on, over or abutting a pier, wharf, dock or other structure extending beyond the normal high-water line of a water body or within a wetland shall not exceed 20 feet in height above the pier, wharf, dock or other structure.

Staff Comment: *An 8 ft x 10 ft shed for storage of life jackets, tools, and research equipment is proposed on the pier, and is an operational necessity. The shed will not exceed 20 ft in height.* ***The proposal meets this standard.***

NOTE: Permanent structures projecting into or over water bodies shall require a permit from the Department of Environmental Protection pursuant to the Natural Resources Protection Act, Title 38 M.R.S.A., Section 480-C.

Staff Comment: *The Applicants have received approval for the proposed dock from the Maine Department of Environmental Protection (MDEP)*

10. *Vegetation may be removed in excess of the standards in Section 15P of this ordinance in order to conduct shoreline stabilization of an eroding shoreline, provided that a permit is obtained from the Planning Board. Construction equipment must access the shoreline by barge when feasible as determined by the Planning Board.*

Applicant Comments:

a. When necessary, the removal of trees and other vegetation to allow for construction equipment access to the stabilization site via land must be limited to no more than 12 feet in width. When the stabilization project is complete, the construction equipment accessway must be restored.

b. Revegetation must occur in accordance with Section 15S.

NOTE: A permit pursuant to the Natural Resource Protection Act is required by the Department of Environmental Protection for shoreline stabilization activities.

Staff Comment: *The applicant has submitted a detailed erosion control and revegetation plan for the project which adequately addresses erosion control and site revegetation standards.* ***The applicant meets these standards.***

11. A deck over a river may be exempted from the shoreland setback requirements if it is part of a downtown revitalization project that is defined in a project plan approved by the legislative body of the municipality, and may include the revitalization of structures formerly used as mills that do not meet the structure setback requirements, if the deck meets the following requirements:

Staff Comment: *The proposal is for a dock/pier, so the above standards related to "decks" are not applicable.* ***Standard not applicable****.*

8. FINDINGS OF FACT: The proposed project will need to meet the standards below at Final Board review:

1) The proposed use meets specific requirements set forth in this ordinance and would be in compliance with applicable state or federal laws;

2) The proposed use would not create fire safety hazards by providing adequate access to the site, or to the buildings on the site, for emergency vehicles and would not create hazards through the storage of chemicals and wastes;

3) The proposed exterior lighting, where allowed, would not create hazards for motorists traveling on adjacent public streets or is adequate for the safety of occupants or users of the site or would not damage the value and diminish the usability of adjacent properties;

4) The provisions for buffers and on-site landscaping provide adequate protection to neighboring properties from detrimental or unsightly features of the development;

5) The proposed use would not have a significant, detrimental effect on the use and peaceful enjoyment of abutting property as the result of noise, vibrations, fumes, odors, dust, glare, hours of operation, or other causes;

6) The provisions for vehicular loading and unloading and parking and for vehicular and pedestrian circulation on the site and onto adjacent public streets would not create hazards to public safety or traffic congestion;

7) The proposed use would generate a volume of traffic that can reasonably be accommodated by the existing road network, or would not create unreasonable traffic hazards or would not exacerbate an existing traffic hazard, or would not create unreasonable traffic congestion;

8) The proposed use would not have a significant, detrimental effect on the value of adjacent properties which could be avoided by reasonable modification of the proposal;

9) The proposed use would not have an adverse impact on the privacy of the residents of the immediate area (within 500 feet) which could be avoided by reasonable modification of the proposal;

10) The proposed use would be in compliance with Biddeford's Comprehensive Plan;

11) The proposed use would not have an adverse impact on the immediate neighborhood or the community relative to architectural design, scale, bulk and building height, identity and historical character, or visual integrity, which could be avoided by reasonable modification of the proposal;

12) The design of the site would not result in significant flood hazards or flood damage or would be in conformance with applicable flood hazard protection requirements;

13) Adequate provision has been made for the disposal of wastewater or solid waste or for the prevention of ground or surface water contamination;

14) Adequate provision has been made to control erosion or sedimentation;

15) Adequate provision has been made to handle stormwater runoff or other drainage problems on the site; and the proposed development will not unduly burden off-site surface water systems;

16) The proposed water supply would meet the demands of the proposed use for fire protection purposes;

17) Adequate provision has been made for the transportation, storage, and disposal of hazardous substances and materials as defined by state law;

18) The proposed use would not have an adverse impact on scenic vistas or on significant wildlife habitat or wetland areas and water bodies which could be avoided by reasonable modification of the proposal;

19) When located in the Shoreland Zone, the proposed use would meet the purposes of Shoreland Zoning as identified in Article XIV, Section 1 (Purposes) of this ordinance.

***Staff Comment**: In reviewing the application, Staff finds that the application satisfies the City's Shoreland Zoning Ordinance and Site Plan criteria.*

9. SAMPLE MOTIONS FOR SITE PLAN AND SHORELAND ZONE APPROVAL:

The Application before the Board is a "Preliminary Plan", so a formal vote is required.

A. Motion to Approve: I motion to APPROVE Case # 2024.34 Final Plan – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District, with the adoption of the Findings of Fact (FOF) and recommended Conditions of Approval (COA).

B. Motion to Deny I motion to DENY Case # 2024.34 Final Plan – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District, for the following reasons:

1)_____.

2)_____.

3)_____.

C. Motion to Table: I motion to TABLE Case # 2024.34 Final Plan – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District, for the following reasons:

1) _____.

2) _____.

3) _____.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

Planning Board Case #2024.34
Final Plan Review – University of New England (UNE)
Site Plan and Shoreland Zoning Review
Proposed Construction of a Marine Science Center Research Pier
11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District.
Date: August 6, 2025

Pursuant to the provisions of the City of Biddeford Code of Ordinances Land Development Regulations, Article XI (Site Plan Review), and Article XIV (Shoreland Zoning Ordinance), the Biddeford Planning Board has considered the application of Based on its review, including supportive data, public hearing testimony and related materials contained in the record, the Planning Board makes the following Findings of Fact and Conclusions of Law:

---

1. PROJECT DATA/INFORMATION

1.	Applicant:	University of New England 11 Hills Beach Road Biddeford, ME

CONCLUSIONS OF LAW:

1. The proposed use meets specific requirements set forth in this ordinance and would be in compliance with applicable state or federal laws;

2. The proposed use would not create fire safety hazards by providing adequate access to the site, or to the buildings on the site, for emergency vehicles and would not create hazards through the storage of chemicals and wastes;

3. The proposed exterior lighting, where allowed, would not create hazards to motorists traveling on adjacent public streets or is adequate for the safety of occupants or users of the site or would not damage the value and diminish the usability of adjacent properties;

4. The provisions for buffers and on-site landscaping provide adequate protection to neighboring properties from detrimental or unsightly features of the development;

5. The proposed use would not have a significant, detrimental effect on the use and peaceful enjoyment of abutting property as the result of noise, vibrations, fumes, odor, dust, glare, hours of operation, or other causes;

6. The provisions for vehicular loading and unloading and parking and for vehicular and pedestrian circulation on the site and onto adjacent public streets would not create hazards to public safety or traffic congestion;

7. The proposed use would generate a volume of traffic that can reasonably be accommodated by the existing road network, or would not create unreasonable traffic hazards or would not exacerbate an existing traffic hazard, or would not create unreasonable traffic congestion;

8. The proposed use would not have a significant, detrimental effect on the value of adjacent properties which could be avoided by reasonable modification of the proposal;

9. The proposed use would not have an adverse impact on the privacy of the residents of the immediate area (within 500 feet) which could be avoided by reasonable modification of the proposal;

10. The proposed use would be in compliance with Biddeford's Comprehensive Plan;

11. The proposed use would not have an adverse impact on the immediate neighborhood or the community relative to architectural design, scale, bulk and building height, identity and historical character, or visual integrity, which could be avoided by reasonable modification of the proposal;

12. The design of the site would not result in significant flood hazards or flood damage or would be in conformance with applicable flood hazard protection requirements;

13. Adequate provision has been made for disposal of wastewater or solid waste or for the prevention of ground or surface water contamination;

14. Adequate provision has been made to control erosion or sedimentation;

15. Adequate provision has been made to handle stormwater runoff or other drainage problems on the site; and the proposed development will not unduly burden off-site surface water systems;

16. The proposed water supply would meet the demands of the proposed use for fire protection purposes;

17. Adequate provision has been made for the transportation, storage, and disposal of hazardous substances and materials as defined by state law;

18. The proposed use would not have an adverse impact on scenic vistas or on significant wildlife habitat or wetland areas and water bodies which could be avoided by reasonable modification of the proposal;

19. When located in the Shoreland Zone, the proposed use would meet the purposes of Shoreland Zoning as identified in Article XIV, Section 1 (Purposes) of this ordinance.

APPROVAL GRANTED:

Based on the evidence available and the conclusions above, the Biddeford Planning Board approves the proposed project summarized within the attached Staff report and pursuant to the provisions of the City of Biddeford Code of Ordinances Land Development Regulations, Article XI (Site Plan Review), and Article XIV (Shoreland Zoning), the Biddeford Planning Board has approved the application # 2024.34 Final Plan Review – Site Plan and Shoreland Zoning Review for the University of New England (UNE) / Proposed Construction of a Marine Science Center Research Pier to be located at 11 Hills Beach Road (Map #52, Lot 4) located in the City's Institutional (IN) Zoning District, with the attached Findings of Fact (FOF) with the following Conditions of Approval (COA):

1. The material provided for the proposed project has been reviewed only for general conformance to the City technical requirements. The applicant(s) and/or their technical consultant shall be responsible for the actual design details and completeness of their work. It is incumbent upon the applicant(s) to ensure that the project is in conformance and complies with all City Codes, ordinances and regulations as well as with all state regulations, including, but not limited to, space and bulk standards, performance standards, use standards and other zoning type requirements.

2. Standard Conditions of Approval apply.

3. Modifications to Approved Development Plans: The project shall be constructed in accordance with the approved development plans. No deviations to the approved development plans shall be made without prior written authorization by the City Planner. Should the Applicants desire a modification from approved plans, they shall be required to submit a formal letter requesting a "minor modification" to the approved development plans. The narrative shall be submitted outlining the request, the reasoning for the request (justification) and shall include plans illustrating the approved plans and proposed modifications. Changes beyond the authority of the City Planner shall be reviewed and approved by the Planning Board. It should be noted that review fees for any proposed changes may be assessed to the Applicant, for Staff or Peer Review time spent evaluating the request.

4. A Letter of Credit or other surety acceptable to the City of Biddeford shall be submitted prior to the issuance of permits or site work being initiated. The financial guarantee shall be established for 150% of the cost of the following improvements:
   a. Landscaping
   b. Paving
   c. Work within ROW (existing or proposed)
   d. Stormwater Drainage
   e. Loam & seed
   f. Sediment & erosion control
   g. As-Built Plans
   h. Property Monuments

5. Prior to any ground disturbance, the applicant shall establish a construction inspection account equal to: $2,500.00.

6. Prior to any ground disturbance, a pre-construction meeting with the owner/applicant, contractor, and City is required. Contact the Engineering Department to schedule this meeting.

7. Contact the Department of Public Works for driveway location permits, curb cut permits and/or street opening permits prior to the start of construction.

8. An as-built plan must be provided to the City of Biddeford Engineering Office at the end of the project electronically, which can be read by the City of Biddeford's Geographic Information System software. Note: Any modifications to the Planning Board approved development plans shall be reviewed and approved by the City Planner prior to being made, including any "field changes".

9. The applicant shall incorporate appropriate erosion control measures into this project to reduce erosion effects from the work. All disturbed areas must be re-vegetated and/or otherwise stabilized at the appropriate stage of the work per Maine DEP standards in the Best Management Practice (BMP) manual.

10. That the Article VI Performance Standards requirements regarding Dust, Fumes, Vapors & Gases (sect 25), Explosive Materials (sect 28), Glare (sect 37), Noise (sect 48) be followed.

11. The applicant shall obtain all other pertinent local, state and federal permits, licenses, and insurance such as blasting, building, electrical, plumbing, etc. prior to commencing business.

12. At the completion of the project the owner/applicant shall request a final inspection. This request shall be directed to the Engineering Department. Performance guarantees and remaining escrow accounts shall not be released until the Planning Office certifies that the project has been completed and is in compliance with the approved development plans and all applicable City Ordinances.

13. The applicant shall submit approved plans for signature of the City's Planning Board, which shall be recorded in the York County Registry of Deeds. An electronic copy of the recorded plan shall be sent to the Planning Office.

14. Once stamped and signed "As-Built drawings" are submitted to the Planning and Engineering Departments (clearly identifying what approved deviations and variances were installed based on the approved permit drawings), the City Engineering Department will conduct an inspection. **The "as Built Checklist" shall be submitted for review and approval, for any performance guarantee release.**

15. As-Built Drawings and CAD Files need to be submitted to the Planning & Engineering Departments **prior to a 'Site Punch list Inspection' and any bond release.**

16. York County Recorded Drawings: Applicant must submit recorded copies of York County Registry of Deed drawings to Planning & Engineering Department **prior to Building Permit Issuance.**

17. As agreed during the public hearing process, the University of New England (UNE) shall be responsible for the reasonable costs, as applicable, for the relocation of all impacted moorings displaced by the construction of the UNE research pier.

18. Fire Department Requirements:

    A. The Applicant shall schedule an on-site inspection with the Biddeford Fire Chief to verify that the emergency vehicle turn-around can accommodate the largest vehicle in their fleet to the Department's satisfaction. Any necessary modifications shall be coordinated with the City Planner and constructed to the Fire Chief's satisfaction.

DEP SIGNATORY REQUIREMENT

PRIVACY ACT STATEMENT

Authority: 33 USC 401, Section 10; 1413, Section 404. Principal Purpose: These laws require permits authorizing activities in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters. Disclosure: Disclosure of requested information is voluntary. If information is not provided, however, the permit application cannot be processed nor a permit be issued.

CORPS SIGNATORY REQUIREMENT

USC Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry shall be fines not more than $10,000 or imprisoned not more than five years or both. I authorize the Corps to enter the property that is subject to this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein.

DEP SIGNATORY REQUIREMENT

"I certify under penalty of law that I have personally examined the information submitted in this document and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate, and complete. I authorize the Department to enter the property that is the subject of this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Further, I hereby authorize the DEP to send me an electronically signed decision on the license I am applying for with this application by emailing the decision to the address located on the front page of this application (see #4 for the applicant and #8 for the agent)."

SIGNATURE OF AGENT/APPLICANT

Date: 4/11/24

NOTE: Any changes in activity plans must be submitted to the DEP and the Corps in writing and must be approved by both agencies prior to implementation. Failure to do so may result in enforcement action and/or the removal of the unapproved changes to the activity.

Mr. Tom Saucier
Site Design Associates
23 Whitney Way
Topsham, Maine 04086

TO WHOM IT MAY CONCERN:

This letter authorizes Tom Saucier, Site Design Associates, to serve as an agent for University of New England for the purpose of permitting the proposed installation of a pier and float, on its Biddeford campus.

Sincerely,

Alan Thibeault
Vice president for University Operations

Excepting and reserving, however, from the last parcel described a small triangular parcel of land in the rear of the premises of Charles E. Roberts which triangular lot has a base of about 50 feet in length which is an extension of the northwesterly boundary of said Roberts lot; and has an altitude of about 100 feet in length which is the northeasterly side thereof and is located in the center of a ditch long supposed to be the rear line of the Roberts lot; and which has a hypotenuse which is coincident with the rear line of said Roberts lot and is the southerly side of said triangule, being the same premises conveyed by Blanche T. Beuscher and Olga M. DeHaven to the said Kenneth A. Littlefield and Barbara A. Littlefield, by their deed of mortgage dated on the twentieth (20) day of February 1958 and recorded in York Registry of Deeds, Book 1354, Page 447, but described under the aforementioned reference only as three certain lots or parcels of land, with buildings thereon, and mentioned as being the same premises conveyed on February 20th, 1958, by Kenneth A. and Barbara A. Littlefield to Blance T. Beuscher and Olga M. DeHaven, by Warranty Deed, Recorded Book 1362, Page 112; and that such entry was made and possession taken as aforesaid, for the avowed purpose of foreclosing said mortgage, because of a breach of the condition thereof.

Raymond E. Mealey

Madeline C. Mealey

STATE OF MAINE

COUNTY OF YORK, SS March 24, 1962 Signed and sworn to by the said Raymond E. Mealey and Madeline C. Mealey,

Before me. Maurice L. Shibles Notary Public (L.S.)
My Commission Expires Sept. 2, 1966

Recorded according to the original received April 6, 1962 at 11h. 58m. A. M. EL

KNOW ALL MEN BY THESE PRESENTS, THAT, COUVENT de la PRESENTATION de MARIE, a corporation organized and existing under the laws of the State of Maine and located at Biddeford, in the County of York and said State of Maine, in consideration of One Hundred Fifty Thousand Dollars ($150,000.00) paid by THE FRANCISCAN FATHERS OF MAINE, a corporation duly organized by law and having an established place of business at 605 Pool Road, in said Biddeford, the receipt whereof it does hereby acknowledge, does hereby give, grant, bargain, sell and convey, unto the said The Franciscan Fathers of Maine, its successors or assigns, forever, the following described property: I.R.S. One Hundred and Sixty Five Dollars

Parcel 1

A certain lot or parcel of land, with the buildings thereon, situated in

said Biddeford and bounded and described as follows:

BEGINNING at a point on the Northerly side of the Hill's Beach Road, so-called, in said Biddeford, said point being the Westerly corner of the land herein conveyed and being in the Southerly line of land formerly of one Finney and now of Couvent de la Presentation de Marie, and being marked by an iron stake driven into the ground; thence South eighty-two degrees eight minutes East (S 82° 08' E) two hundred fourteen and forty-six one-hundredths (214.46) feet by said Hill's Beach Road to an iron stake driven into the ground; thence North eighty-one degrees forty-two minutes East (N 81° 42' E) five hundred forty-five and five one-hundredths (545.05) feet by said Hill's Beach Road to an iron stake driven into the ground; thence South fifty degrees thirty-five minutes East (S 50° 35' E) two hundred thirty-eight and forty-seven one-hundredths (238.47) feet by said Hill's Beach Road to an iron stake driven into the ground and other land of this Grantor; thence North eighty-six degrees twenty-seven minutes East (N 86° 27' E) sixteen and ninety-one one-hundredths (16.91) feet by said other land of this Grantor to a drill hole into the ledge and land now or formerly of John J. Traynor; thence North three degrees thirty-three minutes West (N 3° 33' W) one hundred thirty-three and five tenths (133.5) feet by said land of John J. Traynor, land now or formerly of one Michael Reddy and a reserved street as shown on a plan of land of William A. Chadbourne, drawn by Z. G. Staples, July 14, 1874, and recorded in York County Registry of Deeds in Plan Book 2, Page 40, and by the stone wall to an iron stake driven into the ground at the Southwesterly corner of land now or formerly of William Libby; thence North twenty-two degrees forty-one minutes West (N 22° 41' W) one hundred twenty-eight and one-half (128½) feet by said land of William Libby, other land of this Grantor and by the stone wall to an angle in said stone wall; thence North fifty-five degrees fifty-seven minutes East (N 55° 57' E) three hundred ninety-three and nineteen one-hundredths (393.19) feet by said other land of this Grantor, by a reserved street as shown on said plan, and land now or formerly of Thomas Gallagher and by the fence and wall to an iron stake driven into the ground at the top of the bank; thence this same course to Saco River; thence Northerly, Northwesterly and Westerly by said River to an iron stake driven into the ground at a point of ledge and to said other land of this Grantor; thence South forty-one degrees East (S 41° E) three hundred thirty-nine and seven tenths (339.7) feet to an iron stake driven into the ground at the stone wall; thence South sixty-three degrees West (S 63° W) fifty-six and three tenths (56.3)feet by said stone wall to an iron stake driven into the ground; thence South sixty-nine degrees fifteen minutes West (S 69° 15' W) one hundred sixteen and one-half (116½) feet by said

wall to an iron stake driven into the ground; thence South fifty-three degrees forty minutes West (S 53° 40' W) one hundred twenty-eight and five tenths (128.5) feet by said wall to an iron stake driven into the ground; thence South sixty-eight degrees nineteen minutes West (S 68° 19' W) one hundred and four tenths (100.4) feet by said wall to an iron stake driven into the ground; thence North eighty-eight degrees four minutes West (N 88° 04' W) seventy-seven and nine tenths (77.9) feet by said wall to an iron stake driven into the ground; thence South seventy-four degrees twenty-three minutes West (S 74° 23' W) seventy-nine and two tenths (79.2) feet by said wall to an iron stake driven into the ground; thence South fifty-seven degrees nineteen minutes West (S 57° 19' W) ninety-five and one tenth (95.1) feet by said wall to an iron stake driven into the ground; thence South sixty-four degrees ten minutes West (S 64° 10' W) one hundred six and nine tenths (106.9) feet by said wall to an iron stake driven into the ground; thence South sixty-five degrees thirty minutes West (S 65° 30' W) one hundred forty-four and eight tenths (144.8) feet by said wall to the point of beginning. The last ten courses described being bounded by said other land of this Grantor. The above courses refer to the 1931 magnetic meridian.

Parcel 2

Also another certain lot of land, bounded and described as follows:

BEGINNING at an iron stake driven into the ground at the Southerly corner of the above described parcel and on the Northerly side of said Hill's Beach Road; thence North eighty-six degrees twenty-seven minutes East (N 86° 27' E) sixteen and ninety-one one-hundredths (16.91) feet by said above described parcel to a drill hole in the ledge and land now or formerly of John J. Traynor; thence South three degrees thirty-three minutes East (S 3° 33' E) fifteen and seventy-five one-hundredths (15.75) feet by said land of Traynor to said Hill's Beach Road; thence North fifty degrees thirty-five minutes West (N 50° 35' W) twenty-three and eleven one-hundredths (23.11) feet by said road to the point of beginning.

Parcel 3

Also another certain lot or parcel of land, situated at Hill's Beach, so-called, in said Biddeford, and adjoining the first above described parcel, bounded and described as follows:

BEGINNING at the Northwest corner of Lot #18, on a plan of land made by Z. G. Staples for William A. Chadbourne, dated July 14, A. D. 1874, at land of the late Selucus Adams and S. S. Mitchell; thence running Southerly one hundred (100) feet to Lot #17 on said plan; thence Westerly by last named lot fifty (50) feet; thence North forty-eight degrees West (N 48° W) forty-eight (48) feet by land of said Adams; thence North fifty-one and one-half degrees East (N 51½° E) one hundred six (106) feet by land of said Adams and Mitchell to the place of

48
pg 146

Book 1484

beginning, and containing about five thousand four hundred and twenty-four (5,424) square feet, being the same parcel of land as described in deed of James B. Marr and others to Caroline P. Adams, dated April 1, 1891 and recorded in York County Registry of Deeds in Book 443, Page 88.

The above described premises were conveyed to the within Grantor by Les Soeurs de la Presentation de Marie by deed of Warranty, dated September 30, 1932 and recorded in York County Registry of Deeds in Book 834, Page 67.

Parcel 4

Also another certain lot or parcel of land, together with the buildings thereon, situated in said Biddeford and known as the old Ralph Tristram Jordan place situated on the northeasterly side of the Pool Road, so-called, bounded on the southwesterly side by said Pool Road; southeasterly by the road to the beach and land formerly of Mrs. Horace Woodman; on the northeasterly side by the Saco River; and on the northwesterly side by land, now or formerly of J. B. Coolbroth.

For more particular description of the premises hereinabove last described, reference is made to decree of Supreme Judicial Court of Maine in the matter of Hanford E. Finney against claiments known and unknown dated October 3, 1919, and recorded in said York County Registry of Deeds, Book 671, Page 374.

All fixtures and articles of whatever nature permanently attached to said buildings are included in this conveyance.

TO HAVE AND TO HOLD the aforegranted and bargained premises, with all privileges and appurtenances thereof to the said The Franciscan Fathers of Maine, its successors or assigns, to its and their use and behoof forever.

AND it does COVENANT with the said Grantee, its successors or assigns, that it is lawfully seized in fee of the premises; that they are free of all encumbrances; that it has good right to sell and convey the same to the said Grantee to hold as aforesaid; and that it shall and will Warrant and Defend the same to the said Grantee, its successors or assigns forever, against the lawful claims and demands of all persons.

IN WITNESS WHEREOF, the said Couvent de la Presentation de Marie has caused this instrument to be executed and its corporate seal affixed thereto by - - its Treasurer, thereunto duly authorized, this eighteenth day of April, in the year of our Lord one thousand nine hundred and sixty-two.

Signed, Sealed and Delivered
in Presence of

Harold D. Carroll

By Sister St. Leon of Rome
Leona Lafleur
Its Treasurer, thereunto duly authorized.

Attachment 1 – Activity Description

The Biddeford Campus of the University of New England (UNE), Maine's largest private university, is positioned at the confluence of the Saco River and the Atlantic Ocean. This location, along with state-of-the-art research facilities and world-class faculty, has recently earned UNE's marine programs rankings among the top 10 nationally from *Biology Explorer*, *College Choice*, and *College Magazine*. To expand UNE's unique experiential learning and research opportunities in the marine ecosphere, the University is proposing the construction of a permanent pier which will serve as a four-season research deployment facility directly adjacent to the Arthur P. Girard Marine Science Center on its Biddeford campus

UNE's School of Marine and Environmental Programs, housed in the Girard Marine Science Center, is the academic home of 325 undergraduate and graduate students who are studying marine science, marine policy and management, as well as a wide variety of interdisciplinary fields, including marine ecosystems, conservation, restoration, business, sustainable fisheries and ecological aquaculture, social-ecological systems, and marine sustainability science. Additionally, two programs provide pathways from undergraduate to graduate degrees in Marine Sciences and Maritime Law (a 3+3 partnership with Maine Law).

Three things distinguish UNE's marine programs. The first is the oceanfront location on its core undergraduate campus, which provides direct access to the Gulf of Maine. The second is the multitude of research opportunities available to students starting as early as their first year of undergraduate studies. And the third is how the marine research done by UNE students and faculty directly impacts the people of Maine and beyond.

However, all three of these key assets are limited by the lack of year-round access to the ocean. ***The planned pier will allow students and faculty to be on the water throughout the year, thereby greatly enhancing UNE's groundbreaking research into critical problems facing Maine.***

The jewel of UNE's marine programs is Ram Island, UNE's private one-acre living laboratory two miles from campus in Saco Bay, which was gifted to the University in 2014. The island, which houses a fieldwork station and an experimental kelp farm, provides unparalleled research and field study opportunities for students and faculty. It also creates the potential to develop research partnerships that focus on critical issues facing Maine, making Ram Island home to coastal zone investigations of climate change, marine geology, invasive species, marine mammal ecology and interactions with fisheries and marine aquaculture.

Despite its prime location with direct access to the ocean, UNE currently has floating docks that are removed seasonally, precluding access to Ram Island and other areas of the Gulf of Maine in the critical winter and spring months. Construction of a permanent pier at UNE's Girard Marine Science Center will allow for dynamic, year-round, ocean-going research activities, facilitating scientific and practical exchanges with local, regional, and national marine researchers and industry partners. Additionally, the deep-water access would expand UNE's ability to serve as a collaboration hub for coastal marine and deep-water science and industry. As good stewards of the environment and our coastal neighbors, UNE is committed to ensuring that the planned structure fully adheres to local, state, and national regulations.

Investment in UNE's marine programs is good for Maine taxpayers. With the Gulf of Maine warming faster than almost any other body of water on the planet, marine research afforded by year-round access to the water will allow UNE to gather critical data to guide Maine's response to climate change. These expanded research opportunities will likewise enhance UNE's ability to ensure that its students graduate with the curiosity and experience to both ask and answer the important questions that will inform to the data-driven decisions impacting the expanding fields of aquaculture, fisheries, marine law and policy, marine business and entrepreneurship, ocean food systems, and related fields.

The University of New England (UNE) campus is located along the Saco River in Biddeford, ME. The Marine Science Center (MSC) at UNE is located on the waterfront at the easterly end of campus approximately opposite Camp Ellis in Saco. UNE is proposing to construct a pier from the shore into the Saco River to support MSC research activities and provide an all-tide access facility for small and shallow draft vessels.

The proposed facility includes the following:

1. A pile supported pier structure extending from shore into the Saco River. The proposed pier includes an approximately 130-foot long approach section extending from shore and an 80-foot long pier head section oriented roughly parallel to the direction of flow in the river. The pier consists of a concrete superstructure on steel pipe piles, with timber fender piles for vessel berthing and floating docks, and a pile supported gangway lifting beam to allow the gangway ramp to be temporarily removed from the water.
2. A floating dock system consisting of one 8-foot by 24-foot float, one 8-foot by 26-foot 10-inch float, and one 12-foot by 30-foot gangway landing float to provide all-tide vessel access for UNE's vessels on the west side of the pier, and a single 6-foot by 20-foot floating dock to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.
3. An 80-foot by 5-foot gangway to provide ADA compliant access to the float system.
4. An upland access road connecting the existing road at the MSC to the proposed pier, including associated site grading, drainage, and stormwater management features.

The proposed activities are described in detail in the following sections.

Pier Structure

The proposed vehicle rated pier is supported by twenty-five concrete filled steel pipe piles and a concrete abutment which connects the pier to the proposed access road. All of the piles are located beyond the HAT line, while the abutment is located shoreward of the HAT line. Fourteen, 24-inch diameter steel piles support the pier head portion of the structure and eleven, 16-inch diameter steel piles support the pier approach. The seven piles at the first three pile bents at the pier approach will be socketed to ledge due to a limited soil layer above the ledge surface at these locations. The remaining piles will be driven to ledge but do not require socketing given the sufficient depth of overburden soils. The piles support precast concrete pile caps which support precast concrete deck planks that form the pier deck surface.

The pier includes thirty, 12-inch diameter timber fender piles to provide for vessel berthing at the main face of the pier and to restrain the floating dock system. All new fender piles will be untreated timber, greenheart species. A gangway lifting beam is proposed to lift the gangway out of the water during float

maintenance or in advance of severe weather. The lifting beam is supported by a steel column anchored to the pier on one side and a 10.75-inch diameter concrete filled steel pipe pile on the other.

The total direct impact from all the piles that makeup the pier structure is 84 square feet. The total indirect impact from the pier footprint beyond the HAT line is 3,579 square feet.

Floating Dock System

The proposed floating dock system includes four floating docks. The three timber floats on the west side of the pier are new, while the single float on the east side of the pier is an existing float that wil be relocated from UNE's facility that is located upstream of the proposed pier (note that this facility is proposed to be demolished). The new floats consist of an 8-foot by 24-foot float, an 8-foot by 26-foot 10-inch angled float, and a 12-foot by 30-foot gangway landing float. All new floats will be located on the west side of the pier approach at the south side of the pier head. The existing float is 6-feet by 20-feet and will be located on the east side of the pier approach at the south side of the pier head to provide a tie-up location for the City of Biddeford Fire Boat. The new floats are accessed by the proposed gangway or a fixed ladder, and the fireboat float is accessed solely by a fixed ladder. All the floating docks are located beyond the MLLW line and will be restrained and guided by the timber fender piles. The floats will allow vessels to tie up to the pier at any time during the tide cycle. The total indirect impact from the floating dock system is 848 square feet.

Gangway

The 80-foot by 5-foot gangway provides ADA compliant access to the new floating dock system on the west side of the pier. The gangway connects to the pier near the beginning of the pier approach and lands on the 12-foot by 30-foot floating dock. The total indirect impact from the gangway is 357 square feet (this area excludes the portion of the gangway located above the floating dock).

Pier Buildings

Two pier buildings are proposed to be located on the pier head. At the southeast corner of the pier head is an 8-foot by 10-foot pier shed. This structure will provide storage for small equipment used by MSC staff, as well as an indoor protected location to house certain utility features such as electrical service panels. A 16-foot by 20-foot covered outdoor classroom is proposed on the west end of the pier head. This structure will provide a covered area for students and staff to carry out educational programming on the pier while protected from direct rain or sun exposure.

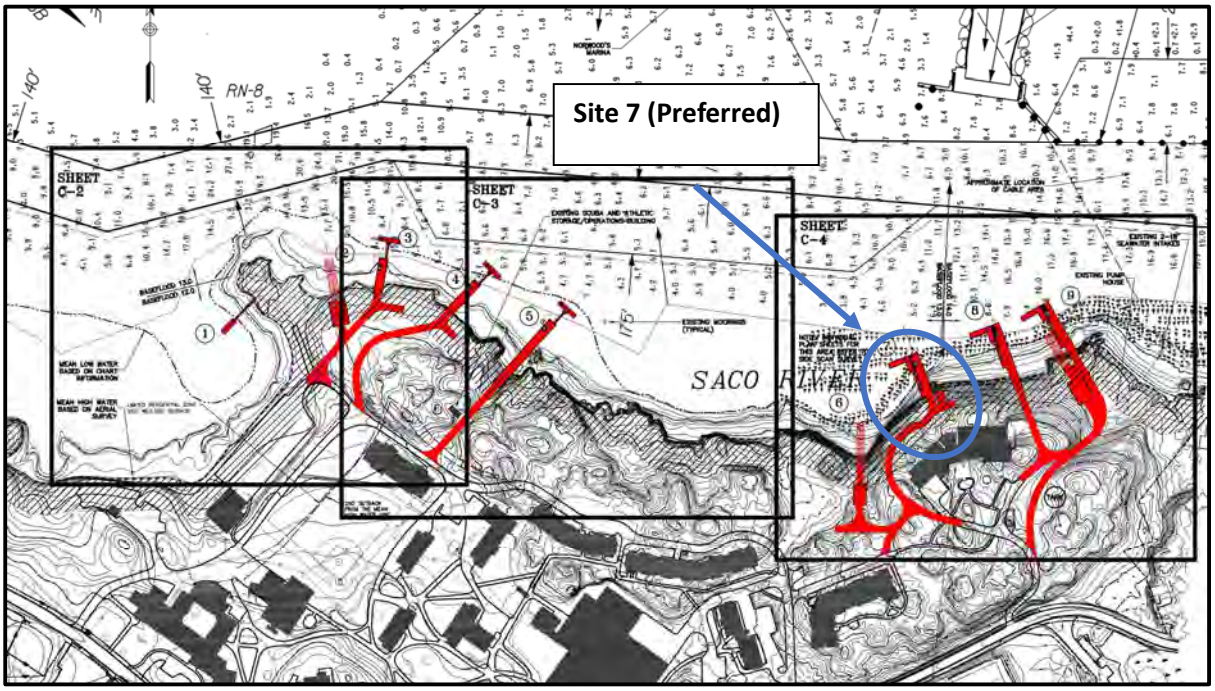
Access Road

Vehicular and pedestrian access to the pier will be provided by a new single-lane access road that will extend from the existing MSC access road and parking area, around the east side of the MSC building, and to the end of the pier approach. The access road has a 20-foot paved width with a single 16-foot wide lane and 2-foot wide paved shoulders. A turnaround area is provided adjacent the pier approach to allow for vehicles up to and including fire trucks accessing the pier to turn around and drive forward to exit the access road. There is no parking proposed adjacent to the pier. All parking will use the existing parking spaces adjacent to the MSC building. The new road will provide construction access for the project, which will help to limit the amount of work performed from the water and allow more staging to

be achieved from land. The upland work will include stormwater management features that have been designed to meet Maine DEP Chapter 500 standards.

Summary of Impacts

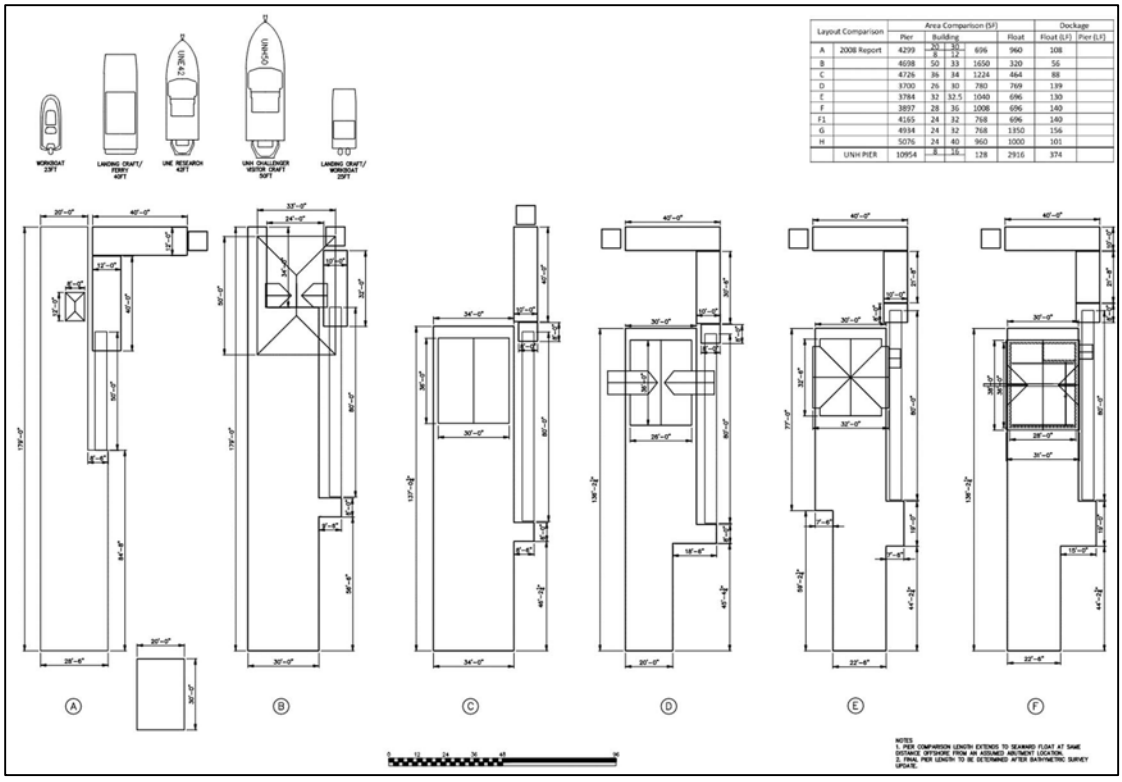
Table 1 provides a tabulation of direct and indirect impacts associated with the proposed facility.



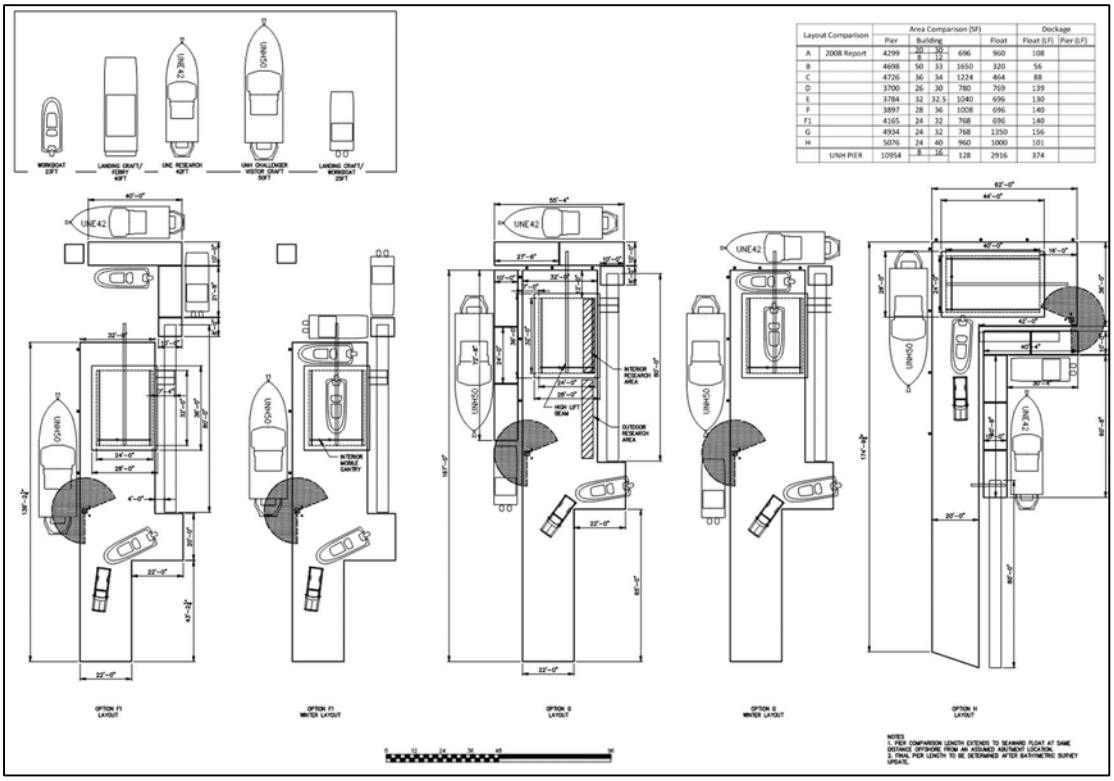
Item		Indirect Impact (SF)	Direct Impact (SF)
1	Pier Structure		
	Pier Support Piles	---	59.3
	Fender Piles	---	24
	Gangway Lifting Beam Support Pile	---	0.6
	Pier Footprint Beyond HAT Line	3579	---
	Total	**3579**	**84**
2	Floating Dock System		
	8-foot by 24-foot float	192	---
	8-foot by 26-foot 10-inch angled float	175	---
	12-foot by 30-foot float	360	---
	6-foot by 20-foot fireboat float	120	---
	Total	**848**	---
3	Gangway		
	5-foot by 80-foot gangway	357	---
	Total	**357**	---
TOTAL IMPACT AREA		4784	84

Attachment 2 – Alternatives Analysis

The Plans provided in attachments 5 and 6 detail the preferred alternative. This design was arrived at after extensive study of alternative locations and layouts for the pier over multiple years time. Alternatives considered in developing the proposed project are briefly described below.

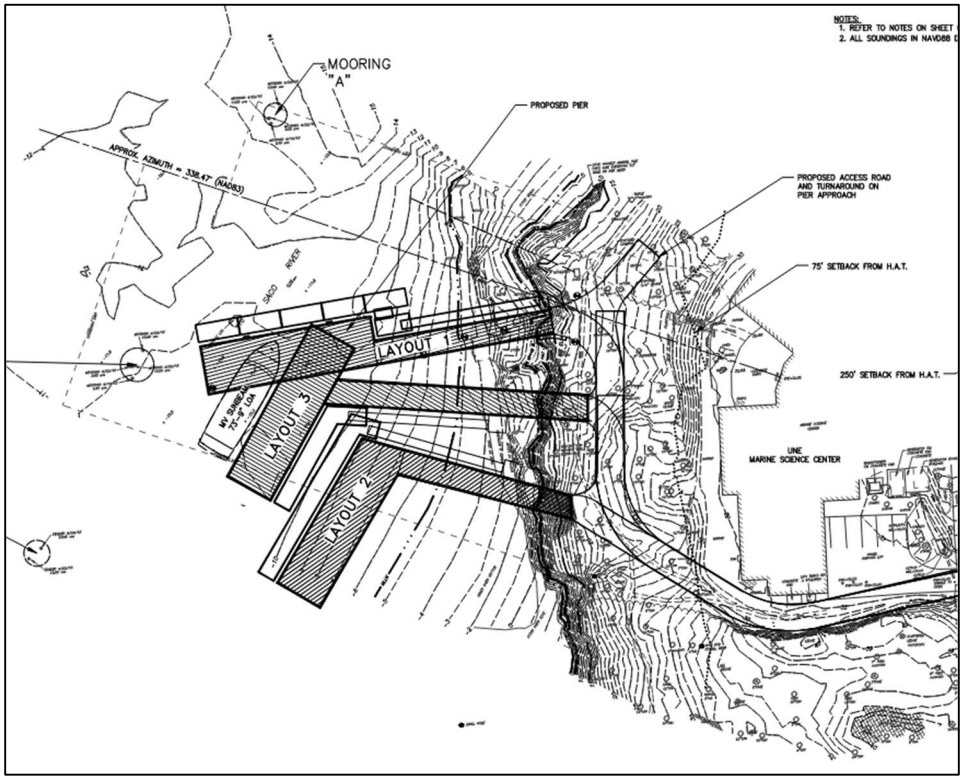


2008-2010 Pier Feasibility Study



In 2008-2010, UNE completed a concept planning study for the proposed pier. In this study, nine alternative designs were developed for water access facilities along the UNE waterfront consisting of various configurations of piers, boat ramps, and upland access and support facilities. The alternatives were evaluated on a range of criteria including technical criteria, functionality, constructability, regulatory impacts, cost of construction, and others to identify a preferred facility location. The nine alternatives evaluated through this study are shown in the figure below. At the conclusion of this study, Site 7 (directly in front of the Marine Science Center building) was identified as the preferred facility location to develop a new pier facility that would consist of a pile-supported pier extending from shore out into the Saco River. This location is optimal for access to and from the MSC facility and on the water, and allows for all-tide berthing with a smaller structure and less impact than several adjacent alternatives that were considered. At the conclusion of this study it was determined that Site 7 was the preferred alternative to move forward with further planning and design.

2015-2016 Pier Layout Study



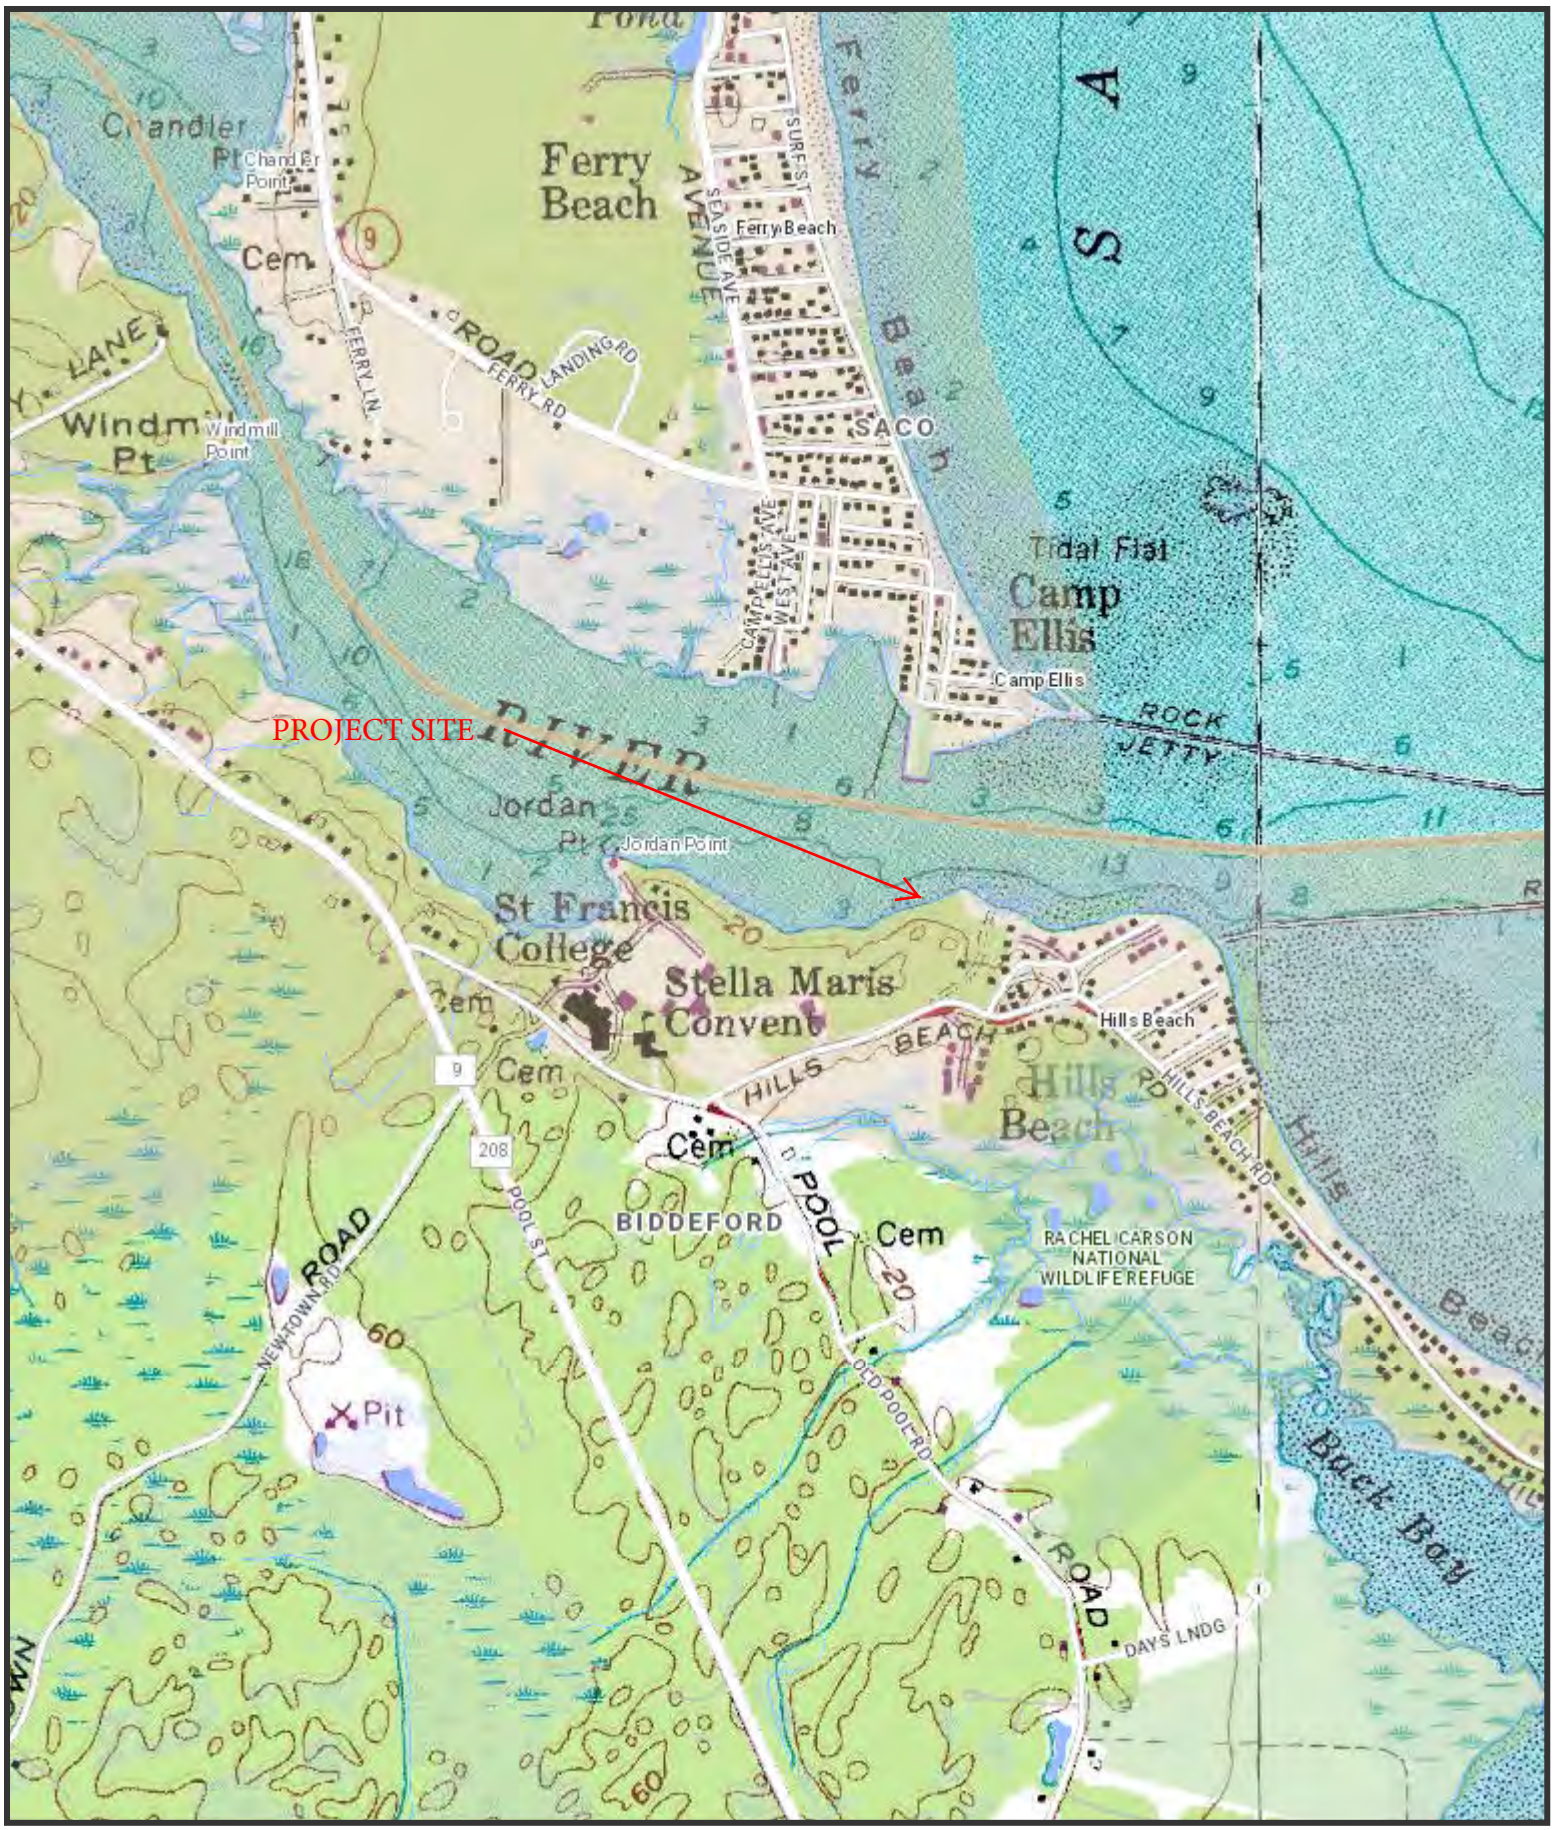
After completion of the pier feasibility study described above, UNE undertook additional effort to study alternative pier layouts that would address the functional needs of the facility as well as the site exposure, berthing conditions, access requirements, and associated site impacts. During this study, numerous alternative pier layouts were considered which are depicted in the two figures that follow.

Further alternative development was completed in 2016 to address a realignment of the pier head parallel to the predominant direction of flow in the River for improved berth functionality. These alternatives considered input of the Biddeford Harbormaster and his knowledge of boating and

conditions on the Saco River after review of earlier layouts during a meeting in early 2016. The figure below depicts three alternatives considered during the study.

2023 Layout Refinement

During design refinement undertaken in 2023, the preferred alternative was identified as a combination of the pier approach from Layout 1, and the pier head from Layout 3, of the 2016 layout study. The Layout 1 pier approach represents the least impactful and most feasible option for upland site access. The Layout 3 pier head provides more desirable berthing conditions by aligning the main berth with flow directions in the River, and reaches sufficient depth to provide all-tide access for the range of vessels anticipated to use the facility. The layout was then refined somewhat to reduce the size of the structure to keep the dimensions to the minimum necessary to accomplish the functional goals of the project. During this refinement, the dimensions of the pier head were reduced from the initially proposed 28-feet wide by 100-feet long, to the currently proposed 23-feet 4 inches wide by 80-feet long. The dimensions of the float dock system were reduced somewhat, and the layout of fender piles was refined to reflect a functional design with minimum necessary dimensions and impacts.



The preferred alternative as currently presented represents a facility of the smallest dimensions possible to provide a functional facility that provides all-tide access for the range of vessels anticipated to use the facility, and ADA compliant access to the floating dock and gangway system and berthed vessels. While it could be possible to further reduce site impacts by further reducing the dimensions of the facility, any reduction beyond the size that is currently proposed would impact the proposed uses of the facility.

Do Nothing Alternative

A Do Nothing Alternative is the least impactful option, but would fail to address the goal of providing all-tide access to support UNE's marine research and educational programming through the marine science center. The existing seasonal floats and gangway located on the UNE campus upstream of the MSC building do not effectively meet these needs. Therefore, a Do Nothing alternative is not considered to be a feasible long-term solution.

ATTACHMENT 4 – PHOTOS

Looking down river

Looking down river.

At site.

ATTACHMENT 5/6 – PLANS

Attachment 7 – Construction Plan

Construction Access

The project occurs on a waterfront site along the Saco River. The proposed activities will require construction access by land and from water. Access by land will be by roads on the UNE campus. The new pier access road will be roughed-in early in the construction to provide an upland route for construction access, material deliveries, and staging. Access to the site by water will be by barge from the Saco River. The contractor will be directed to avoid impacts to the nearby federal navigation channel and adjacent waterfront facilities during site access. Short-term temporary impacts to the federal channel and adjacent facilities may be necessary during various stages of the project. The contractor will be directed to coordinate impacts with adjacent facility owners, the Biddeford and Saco Harbormasters, the Coast Guard, and the Army Corps of Engineers.

Construction Notices

The owner and/or owner's agent will notify abutting property owners when the work starts and will keep them informed of changes in project schedule.

Method of Construction

The work will require mobilization of marine construction equipment (barge, crane, tug, work boat), and upland construction equipment (earthmoving, concrete placement, paving). The pier design uses pre-fabricated components to the greatest extent possible to minimize the required onsite construction time. A summary of the construction process is provided below:

1. Contractor mobilization for upland construction.
2. Rough-in access road and install temporary erosion and sedimentation control measures.
3. Construct concrete pier abutment.
4. Contractor mobilization for marine construction.
5. Drive steel pipe piles.
6. Install precast concrete pile caps using barge mounted crane.
7. Install precast concrete deck planks using barge mounted crane.
8. Install timber fender piles and associated fendering components.
9. Install floating docks and gangway.
10. Complete construction of pier topside components including timber curbs, metal handrails, utilities, pier buildings, jib crane, and ancillary features.
11. Complete construction of access road including paving and permanent erosion and sedimentation control measures
12. Demobilize from site.

Construction Schedule

The construction is proposed to take place during winter 2024-2025. The construction is estimated to take 8-9 months to complete. It is anticipated that the start of upland construction will be scheduled in early fall to allow the access road to be roughed-in prior to the start of marine construction. Marine

construction will be completed in compliance with the standard November 8-April 9 in-water work window. All in-water work will be completed within this window. Topside work on the pier may extend beyond the end of the in-water work window. Final completion of the upland access road is anticipated to be in late spring to early summer 2025, as this will need to be timed to consider local road postings that may impact construction equipment and material access to the site.

ATTACHMENT 8 – EROSION CONTROL PLAN

Erosion control details and specifications are included on the project plans.

WETLAND SURVEY UPDATE
PROPOSED PIER MARINE SCIENCE CENTER
U.N.E. - BIDDEFORD, ME.

Tom,

Please review the following updated Wetland Report for the proposed Pier at the University of New England (UNE) Marine Science Center.

1.0 PROJECT INTRODUCTION

As requested, this report is a summary of a 2023 review of prior wetland surveys for the proposed permanent Pier location at the UNE Marine Science Center in Biddeford originally completed on September 3 and 23, 2015. We have revisited the area several times since the first wetland survey for various efforts and the site is generally unchanged from the 2015 survey. We understand that the current proposed Pier location has shifted alignment slightly toward the northwest from the previous proposed alignment back in 2015. In 2023 the project area was expanded southerly of the 2015 wetland survey to the northerly end of Hill's Beach. We added Wetland D at the transition point from the rocky Saco River ledges to the sandy outwash of Hill's Beach. These areas are not in the immediate vicinity of the proposed Pier and should not be impacted by its construction.

The project area generally consists of uplands with shallow soils over bedrock above short and steep bedrock exposures (ledges) leading down and into the Saco River at some locations. Areas of shaly/gravelly soil exposures are intermixed with silty/sandy flats that are exposed at low tide along the base of these bedrock faces. We did not identify any wetland colonies within the proposed Pier limits however two small colonies of coastal wetland plants (Wetlands A & B) are located in the rocky beach along the original southerly project limits. There is a small "perched" wetland (Wetland C) lying in a narrow shelf of the bedrock cliff northerly of the proposed Pier location.

This spring (2023) we delineated a Coastal Wetland (Wetland D) southerly of the original survey area that was added to the original survey limits and approximately six hundred feet (±600') distant from the

proposed Pier Project. Wetland D is located at the northerly end of Hill's Beach at the transition spot from rocky shoreline along the Saco River to the sandy Hill's Beach.

Lastly, we also noted a small "pocket" of coastal wetlands approximately three hundred feet (±300') northerly of the original survey area. The National Wetlands Inventory (NWI) mapping closely resembles the wetland areas in this area and further described in the following.

2.0 PROJECT METHODOLOGY

We reviewed the Medium Intensity Soil Survey by the Natural Resource Conservation Service (NRCS), Maine G.I.S. website for Aerial Photography, Shorebird Feeding Habitat, Shorebird Roosting Habitat, U.S. Fish & Wildlife's National Wetland Inventory Maps, Topographic/Soundings Survey by Statewide Surveys, Inc and Owen Haskell, Inc, Wetlands/Deep Water Classifications by Cowardin and The Identification and Management of Significant Fish and Wildlife Resources in Southern Maine by the Maine Inland Fisheries and Wildlife and the Coastal Sand Dune Geology Map by the Maine Geological Survey prior to conducting the Wetland Survey.

The project limits were defined by Site Design Associates in 2015 and redefined in 2023. Relative site features were located within the project area using a Trimble® Geo-XH Global Positioning Unit (GPS). The wetlands were reviewed again during topographical and bathymetric surveys. We surveyed the site at low tide conditions during both visits in the spring of 2023 and back in 2015 to thoroughly examine and photograph the site within project limit for wetlands.

We also used hand tools to observe the limited soils available in both the uplands and river floodplain. We documented any clams, mussels and marine worms where soils were observed at intermittent locations within the Low, Mid and High Intertidal Zones. We did not identify any wetland vegetation within the proposed location for the new Pier. However, small wetland communities were documented and mapped where present within the project limits.

Typically, three wetland parameters are required with the Routine Method described in the 1987 U.S. Army Corps of Engineers (USACE) Wetland Delineation Manual and its Regional Supplement: North-Central and Northeast Region (Version 2). These environmental parameters include: the presence of hydric soils[1], the predominance of hydrophytes[2] and evidence of wetland hydrology[3].

1. *"Hydric" soils formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (NEIWPCC).*
2. *"Hydrophytes" are plants growing in wetlands that have adapted in one way or another to life in permanently or periodically inundated or saturated soils (USACE).*
3. *"Hydrology" is permanent or periodic inundation, or soil saturation to the surface, at least seasonally is the driving forces behind wetland formation (USACE).*

The project area was expanded in 2023 to include more area southerly of the proposed pier site. We delineated a coastal wetland (Wetland D) along the southerly limits of the newly expanded project area. These coastal wetlands have alluvial and "hydric" soil conditions, presence of hydrology and a prevalence of hydrophytes thereby meeting the required wetland criteria identified in the USACE manual.

The three parameters are not all present at the proposed Pier location and we understand the site would

meet the Maine Department of Environmental Protection (MDEP) Shoreland Zoning-Coastal Wetlands. Specifically, lands below the HAT Line which is determined by elevation 6.6' NAVD-88. A wrack line is evident in the field which is a visual indicator of the daily high tide limits and likely slightly below the HAT elevation.

Coastal Wetlands are defined as: All tidal and sub-tidal areas, including all areas below any identifiable debris line left by tidal action; all areas with vegetation present that is tolerant of saltwater and occurs primarily in a salt water or estuarine habitat and any swamps, marsh, bog, beach, flat or other contiguous lowland which is subject to tidal action during the maximum spring tide level as identified in the tide tables published by the National Ocean Service (38 MRSA 480-B).

The 2015 Wetland Survey found small colonies of vegetation commonly found in Coastal Wetlands within the project limits, however these areas are not within the area for the proposed Pier. We designated these areas as Wetlands A, B and C and are all located below the HAT Line within the intertidal zone. We revisited the site in 2023 on two occasions to review wetlands in the expanded area lying southerly of the original project area. We added Coastal Wetlands "D" during these visits and the limits were located during topographical survey work.

Wetlands A & B

Both Wetland A (55 ft^2) & Wetland B (107ft^2) are two small stands of sparsely populated plant colonies that are nearly connected and located in the rocky beach southerly of the project area. The sparsely populated plant species included the sea lettuce (Ulva lactuca) along the water's edge, smooth cordgrass, a few orachs (Atriplex sp.), sea-shore goldenrods (Solidago sempervirens) with some scattered sea plantain. These areas are shallow to refusal in the rocky substrate with less than seven inches of alluvium (<7") consisting of shaly very dark graying brown sandy loams and loamy sands. Both areas are below the HAT line.

Wetland C

Wetland C (41 ft^2) is a small "perched" wetland located on a "shelf" in the ledge exposure northerly of the proposed pier location in the project area. The small area is also below the HAT Line and inhabited with a sparse plant community underlain with shallow alluvial soils. The small colony of herbaceous halophytes and/or hydrophytes are rooted into the shallow alluvial soils with daily tidal inundation being located below the obvious high tide line. The sparse and intermixed vegetation considered hydrophytes and halophytes included: sea lavender (Limonium carolinianum), smooth cordgrass (Spartina alterniflora), seaside goldenrod (Solidago sempervirens) and rockweed. This narrow area was not "flagged" for environmental reasons being underwater at times and flagging will not stand the tidal currents. Please see attached map for wetlands location.

Wetland D

Wetland D is a narrow Coastal Wetlands area along the Back Sand Dune of the reaches of Hill's Beach. This open ended area marginal wetland was added in 2023 with the expansion of the overall Project Limit. Wetland D has an evident wrack line with sparsely populated individual sea-shore goldenrods (Solidago sempervirens), cordgrass (Spartina alterniflora), american beach grass (Amnophila breviliguata) and raspberry (Rubus sp.) stems between the wrack line and upland vegetation. This area has slight characteristics of a back sand dune environment. The sparse vegetation is mainly between the principle

wrack line and the apparent HAT Line. This open ended wetland area begins where the rocky shoreline of the Saco River meets with the flat sands of the northern end of Hills Beach. Our first visit in 2023 found the area saturated from the previous high tide cycle and the wetland limits were readily apparent to the upland vegetation edge. The upland edges are inhabited with freshwater (palustrine) species including: sumac (Rhus sp.), honeysuckle (Lonicera sp.) and oaks (Quercus spp.).

Upland Characteristics

The site is generally gently sloping downward in an easterly direction toward the Saco River. We found the adjacent uplands to be consistent with the NRCS Soil Map where the NRCS identified the area with Lyman Rock-Outcrop Complex in the Soil Survey of York County, Maine. The upland soils are shallow to hard bedrock intermixed with bedrock exposures or outcroppings.

Mature trees are sparsely inhabiting the land in front of the Marine Science Center and the proposed Pier location. These trees include white oak (Quercus alba), red oak (Quercus rubrum) and shagbark hickories (Carya ovata). These hardwoods appear to be mature, however also appear somewhat stunted growth likely from the limited availability of nutrients in the shallow soils.

We did not observe any wildlife in the upland areas during the 2023 review, however there is evidence of remnant squirrel nut casings under the oak trees. In 2015 we observed some bird and animal species using the Saco River while on-site collecting data for the wetlands including: belted kingfisher (Ceryle alcyon), ring billed gull (Laurus delewarensis), great commorant (Phalacrocorax carbo) and a least sand piper (Calidris minutilla). We also observed some invasive green crabs (Carcinus maenas) and sand shrimp (Crongon septemspinosa) in the shallow water along the river's edge. We only observed a breeding (presumed) pair of canadian geese and a loon with winter plumage in 2023.

We did not identify any special wildlife resources such as nesting, rookeries, nesting sites, seal haul outs etc. We reviewed the MDEP website for Shorebird Feeding and Roosting Habitats. None were listed or identified at the proposed project area. Additionally, we referred to The Identification and Management of Significant Fish and Wildlife Resources in Southern Coastal Maine for resources in this area. The document identifies the mouth of the Saco River with Shorebird Feeding and Roosting Areas which is southerly of the project location.

3.0 PROJECT SUMMARY

The 2023 realignment location for the proposed Pier is very close to the 2015 area and along the same ledges as the original location. The 2023 alignment appears to be better positioned in relation to the shoreline and the Saco River flow from our site observations. The site generally consists of bedrock controlled uplands leading down to short steep bedrock cliffs and the rocky shoreline of the Saco River. We reviewed the project study area for wetland habitats as shown on the survey plan. The approximate high tide line is very evident with its intermittent "wrack" or debris line along the bedrock cliff exposures representing fluctuating water levels and tidal events.

The footprint area for the proposed Pier is nearly void of any vegetation except some rockweed (Fucus vesiculosus) along the lower parts of the rocky ledges in the mid-intertidal zone and above the Saco River and the low intertidal zone. The natural scouring effect of the fluctuating tides apparently limits plants with

an opportunity to anchor in the lower-intertidal zone or the subtidal river bottom.

We observed some very dark, mixed alluvial soils (deposited materials) below the apparent high tide lines and along the bottom of the bedrock cliffs and the Saco River's edge. Most of the alluvial soils where present are subtidal or just above being completely submerged at low tide and considered as hydric under flooded conditions. There are also small areas with shallow soil "pockets" that are intermixed among boulders and stones along the bedrock cliffs that "grade" down to mixed coarse and fine shales, gravels, sands and silts of the unconsolidated Saco River bottom.

We did not identify any typical coastal wetlands vegetation within the footprint area for the proposed Pier alignment. We understand that wetland regulations are in effect below the Highest Annual Tide of 6.6' NAVD-88 Datum where typical wetland vegetation is not present. We also understand regulatory setbacks (buffers) including the Shoreland Zone would originate above the HAT Line.

We noted another coastal wetland in the intertidal zone to the north of the project limits and not shown. This small wetland colony should not be impacted from the Pier installation. The NWI maps indicated these findings as well with coastal wetlands located both to the north and south of this project area. Both the north and southerly coastal wetlands have been designated as E2AB1N (Estuarine, intertidal, algae aquatic bed, regularly flooded & tidal fluctuation) on the NWI maps. The Saco River is designated as E1UBL (Estuarine, subtidal with unconsolidated bottom).

The project is subject to regulatory review being located within the Saco River floodplain and the Shoreland Zone at the State & Federal Level by the MDEP and the USACE. We understand regulatory setbacks would be measured from the HAT Line per elevation 6.6' NAVD-88 without a coastal wetland boundary to measure from. We also understand, permitting with the MDEP would be with the Mandatory Shoreland Zoning Act (MSZA) and typically required within 250' of the high water mark of a great pond or river, upland edge of a coastal wetland. We further understand that state regulations are in effect within 75' or 100' of the HAT line depending on the type and size of any proposed impacts to these areas.

We recommend reviewing the MDEP Natural Resources Protection Act (NRPA) Permit Applications and scheduling a Pre-Application meeting with the regulatory agencies to determine the required permits for the proposed permanent Pier. We understand that Resource Permits will be required for the permanent Pier within the intertidal zone and below the HAT Line. Areas below the HAT Line at the site meet the definition for Coastal Wetlands. Coastal Wetlands are also considered as "Wetlands of Special Significance" with the MDEP. Impacts to "Wetlands of Special Significance" could require offsetting mitigation depending on the size and type of impact. Lastly, additional permits with the MDEP are likely for any impacts are proposed in and adjacent to the Sand Dunes at Hill's Beach.

Wetlands are regulated also by the USACE under the provisions of Section 404 of the Clean Water Act below the HAT Line and navigable waters of the United States. The USACE may also review permit applications resulting from wetland impacts. We understand permits will be required to alter the wetland resources on-site below the HAT Line. The Corps will evaluate the Pier project and determine the appropriate permit/s required for impacts to Coastal Wetlands whether they are "Wetlands of Special Significance" or not with the MDEP.

The City of Biddeford also has a Code of Ordinances in effect with regulations over resources including the Saco River. The City should be consulted with regarding any local permits that may be required for work in or adjacent to the resource. This may require a UNE Representative to sign local permitting applications. A

MDEP or USACE or Biddeford Official may be required or helpful to determine the permit/s needed for the proposed project along the Saco River shoreline and working within the Shoreland Zone and its buffer. We can assist with environmental meetings with the City, MDEP or USACE if needed.

We further recommend contacting Dig-Safe for underground utility locations. An independent contractor may be necessary to mark utilities on private property. Lastly, we always recommend implementing Best Management Practices (BMP's), especially for stormwater and erosion control during and after construction until the site becomes stabilized and compliance with all environmental regulations during site work.

In the event you have any questions or need further assistance, please contact me using the office addresses provided or the office number at 207-767-4200.

Public Notice

NOTICE OF INTENT TO FILE

Please take notice that University of New England, 11 Hills Beach Road, Biddeford, Maine 04005 is intending to file a Natural Resources Protection Act permit application with the Maine Department of Environmental Protection pursuant

to the provisions of 38 M.R.S. §§ 480-A thru 480-BB on or about June 17, 2024. The application is for a permanent research pier with a ramp and floats at the following location: 11 Hills Beach Road, Biddeford, Maine 04005.A request for a public hearing or a request that the Board of Environmental Protection assume jurisdiction over this application must be received by the Department in writing, no later than 20 days after the application is found by the Department to be complete and is accepted for processing. A public hearing may or may not be held at the discretion of the Commissioner or Board of Environmental Protection. Public comment on the application will be accepted throughout the processing of the application. For Federally licensed, permitted, or funded activities in the Coastal Zone, review of this application shall also constitute the State's consistency review in accordance with the Maine Coastal Program pursuant to Section 307 of the federal Coastal Zone Management Act, 16 U.S.C. § 1456. The application will be filed for public inspection at the Department

of Environmental Protection's office in Portland during normal working hours. A copy of the application may also be seen at the municipal offices in Biddeford, Maine. Written public comments may be sent to the regional office in Portland where the application is filed for public inspection:

Project: MHPC# 0500-23 University of New England; 11 Hills Beach Road
Permanent Pier and Float System

Town: Biddeford, ME

Dear Mr. Saucier:

In response to your recent request, I have reviewed the information received April 13, 2023 to initiate consultation on the above referenced projects in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended (NHPA).

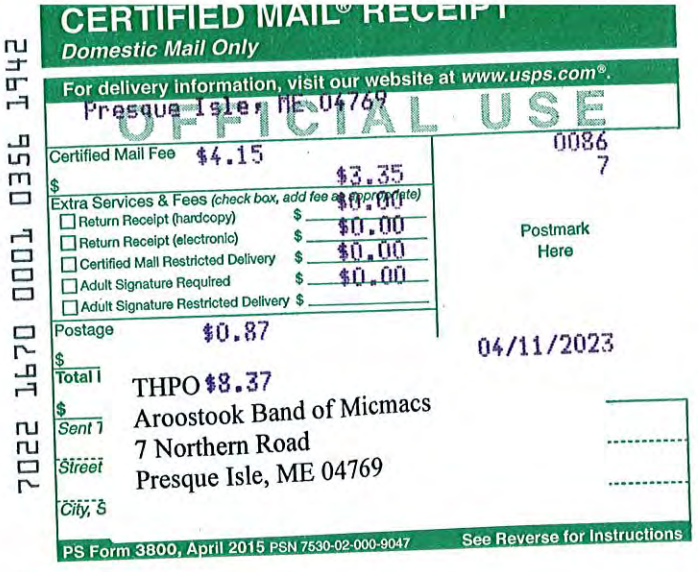
Dr. Arthur Spiess of my staff has carefully reviewed our February 7, 2000 letter concerning areas of archaeological site significance on the UNE campus, and the Phase III report that formed the background of these recommendations. We note that some of the areas of the proposed access road and the head of the pier fall outside of the areas found not to be contributing to the overall significance of the archaeological site(s) on the UNE campus (specifically areas 99.1, 99.2 and 99.8. Moreover, the intensity of previous archaeological testing along the now-proposed access road (especially within area 99.1).

Based on the information submitted, I have concluded that the proposed work will have **no adverse effect** upon historic properties.

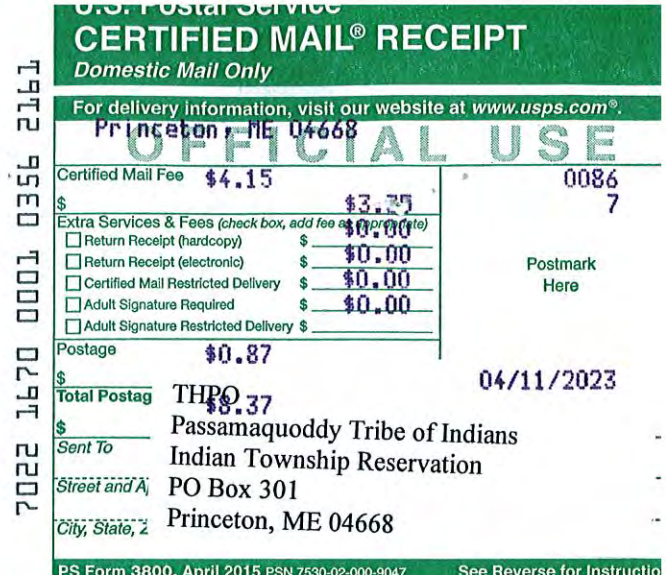
However, our finding is *conditional* upon the following:

1) We recommend that one or more archaeologists monitor the initial clearing of soil from the route of the access road and be allowed enough time to recover information from any subsoil features that are present. It would be most important to monitor the access road from the curve in the road to be located just east of the north wall of the marine science center to the head of the proposed pier.

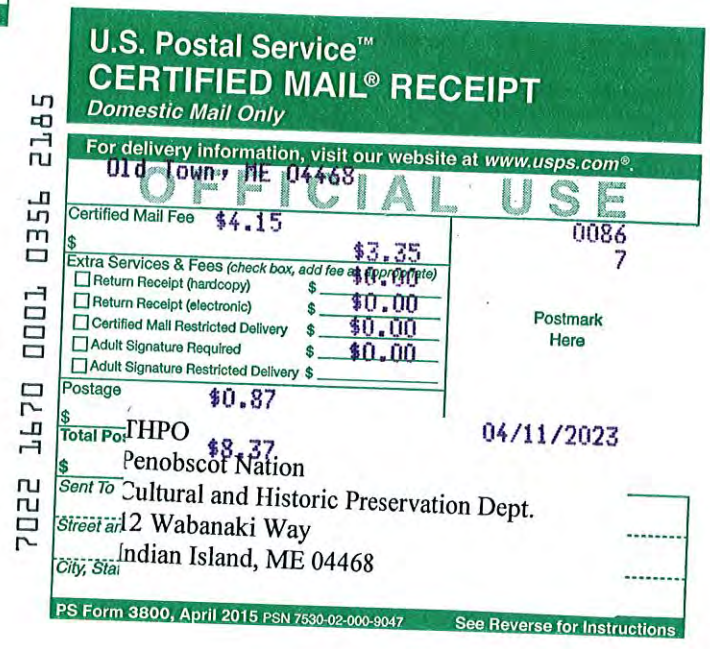
Please contact Megan M. Rideout at (207) 287-2992 or megan.m.rideout@maine.gov if we can be of further assistance in this matter.



Sincerely,



Kirk F. Mohney



Kirk F. Mohney
State Historic Preservation Officer

RE: Proposed Marine Science Center Pier
11 Hills Beach Road
Biddeford, Maine

On behalf of our client, University of New England (UNE), we are assisting with the preparation of Maine Department of Environmental Protection Natural Resources Protection Act and U.S. Army Corps of Engineers Permit applications. The applications are for the installation of a permanent pier and float system on UNE's campus at 11 Hills Beach Road in Biddeford.

This letter and the enclosed materials serve as a means to notify you of the project and give you an opportunity to determine whether the proposed development would affect properties of religious and/or cultural significance. If the Tribe has concerns in this area, please notify us by letter to the address below, contact me at 207-449-4275 or via email at tsaucier@sitedesignassociates.biz.

Thank you for your assistance and the generosity of your time to review this project in reference to the Tribe's concerns.

Sincerely,

Site Design Associates

ATTACHMENT 12 – MDEP VISUAL EVALUATION FIELD SURVEY CHECKLIST APPENDIX A

APPENDIX A: MDEP VISUAL EVALUATION
FIELD SURVEY CHECKLIST
(Natural Resources Protection Act, 38 M.R.S. §§ 480 A - Z)

Name of applicant: University of New England Phone: 207-602-2365

Application Type: NRPA

Activity Type: (brief activity description) Pier, gangway and float

Activity Location: Town: Biddeford County: York

GIS Coordinates, if known: _____ _____

Date of Survey: 05/01/23 Observer: Tom Saucier Phone: 207-449-4275

1. Would the activity be visible from:	Distance Between the Proposed Visibility Activity and Resource (in Miles) 0-¼	¼-1	1+
A. A National Natural Landmark or other outstanding natural feature?	☐	☐	☒
B. A State or National Wildlife Refuge, Sanctuary, or Preserve or a State Game Refuge?	☐	☐	☒
C. A state or federal trail?	☐	☐	☒
D. A public site or structure listed on the National Register of Historic Places?	☐	☐	☒
E. A National or State Park?	☐	☐	☒
F. 1) A municipal park or public open space?	☐	☐	☒
2) A publicly owned land visited, in part, for the use, observation, enjoyment and appreciation of natural or man-made visual qualities?	☐	☐	☒
3) A public resource, such as the Atlantic Ocean, a great pond or a navigable river?	☒	☐	☐
2. What is the closest estimated distance to a similar activity?	☒	☐	☐
3. What is the closest distance to a public facility intended for a similar use?	☐	☐	☒

4. Is the visibility of the activity seasonal? ☐Yes ☒No
(i.e., screened by summer foliage, but visible during other seasons)

5. Are any of the resources checked in question 1 used by the public during the time of year during which the activity will be visible? ☒Yes ☐No

A listing of National Natural Landmarks and other outstanding natural features in the State of Maine can be found at: www.nature.nps.gov/nnl/Registry/USA_map/states/Maine/maine.htm . In addition, unique natural areas are listed in the Maine Atlas and Gazetteer published by DeLorme.

ATTACHMENT 13 – PROJECT DESCRIPTION WORKSHEET APPENDIX D

Natural Resource Protection Act Application

APPENDIX D: Project Description Worksheet for a Dock, Pier or Wharf Application.

Help us process your application more efficiently by completing this worksheet, which is supplemental to a NRPA application for a dock, pier or wharf. A completed Appendix D may be substituted for Block 14 of the application page.

THIS IS AN APPLICATION FOR A.....

☐ Commercial wharf

If yes, indicate type of commercial activity: _____

License number: _____

Number of fishermen using this wharf: _____

☐ Public pier, dock or wharf

☐ Common or shared recreational pier, dock or wharf

☐ Private recreational pier, dock or wharf

☐ Expansion or modification of an existing structure

☒ Other, please indicate: Research pier, gangway, and floats

TELL US ABOUT YOUR BOAT....

My boat(s) requires a draft of up to 5 feet.

My boat(s) is 60' max feet long.

TELL US ABOUT YOUR PROJECT SITE.... For coastal piers and wharves, please complete Appendix B of the NRPA application. For freshwater docks, please describe the substrate and any vegetation: See appendix B

SCENIC CONSIDERATIONS... Please complete Appendix A of the NRPA application.

WHAT FACILITIES ARE NEARBY?

The nearest public boat launch is located in Biddeford (town) approximately 2 (distance) miles from the project location.

The nearest public, commercial, or private marina is located in Saco (town) approximately 0.04 (distance) miles from the project location.

☐ I have inquired about slip or mooring availability at the nearest marina or public facility.

☐ Yes, a slip or mooring is available. ☐ No, a slip or mooring is not available.

Approximate expected time on waiting list: _____

☒ I have contacted the local Harbor Master.

Name: University of New England Phone: 207-602-2365

I currently use the following for my boat: ☐ Mooring ☐ Marina

TELL US ABOUT YOUR PROPOSED PIER, DOCK OR WHARF...

MATERIALS:

☒ The structure will be supported by pilings.
14 pilings of 24 inches in diameter
and 11 pilings of 16 inches in diameter

☐ The structure will be supported by stacked, flow-through granite cribs.
_____ blocks, measuring _____ feet by _____ feet

☐ The structure will be supported by solid fill.
_____ square feet of solid fill

☒ Other: (30) 12" diameter timber fender piles will be installed around perimeter of pier head, and (1) 10.75" diameter steel pile will support the outer side of the gangway lifting gantry

DIMENSIONS:

Length of fixed section: Refer to plans.
Width of fixed section: Pier head 23'-4" x 80'-0"
Length of ramp: Pier approach 123'+/- x 14'-0" to 23'-4"
Dimensions of float: 80 feet
Refer to plans. (1) 12'x30', (1) 8'x24', (1) 8'x26'-10", (1) 6'x20'
Distance the structure will extend below mean low water (MLW): +/-115 feet
Depth of water at the fixed end of the structure: +/-5 to 6 feet
Depth of water at the float at low tide: +/-3.5 to 5 feet
Depth of water at the float at high tide: +/-13.2 to 14.7 feet
Dimensions of any proposed buildings (e.g. bait shed):
<12 feet high by 8 feet wide by 12 feet long storage shed
<20 feet high by 16 feet wide by 30 feet long outdoor covered classroom

ACCESS:

During construction, my project site will be accessed via:

☒ Land

☐ Beach/intertidal area

☒ Water/barge

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed, and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through IPaC by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at: https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts, see Migratory Bird Permit | What We Do | U.S. Fish & Wildlife Service (fws.gov).

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Maine Ecological Services Field Office

PROJECT SUMMARY

Project Code: 2023-0081325
Project Name: University of New England Pier Revised
Project Type: Boatlift/Boathouse/Dock/Pier/Piles - New Construction
Project Description: The project involves construction of a permanent pier on the Saco River and an access road to support the University of New England Marine Sciences program. The project will involve clearing approximately 0.3 acres of mixed forested upland and disturbance of 85 square feet intertidal and deep water habitat for pier piles.

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@43.4599768,-70.38240099961078,14z

Counties: York County, Maine

ENDANGERED SPECIES ACT SPECIES

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Endangered
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

BIRDS

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Roseate Tern *Sterna dougallii dougallii* Population: Northeast U.S. nesting population No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/2083	Endangered
Rufa Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

Subject: Technical assistance for 'University of New England Pier Revised'

Dear Ian Broadwater:

This letter records your determination using the Information for Planning and Consultation (IPaC) system provided to the U.S. Fish and Wildlife Service (Service) on May 12, 2023, for “University of New England Pier Revised” (here forward, Project). This project has been assigned Project Code 2023-0081325 and all future correspondence should clearly reference this number.

The Service developed the IPaC system and associated species’ determination keys in accordance with the Endangered Species Act of 1973 (ESA; 87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.) and based on a standing analysis. All information submitted by the Project proponent into the IPaC must accurately represent the full scope and details of the Project. Failure to accurately represent or implement the Project as detailed in IPaC or the Northeast Determination Key (Dkey), invalidates this letter. To make a no effect determination, the full scope of the proposed project implementation (action) should not have any effects (either positive or negative effect(s)), to a federally listed species or designated critical habitat.

Effects of the action are all consequences to listed species or critical habitat that are caused by the proposed action, including the consequences of other activities that are caused by the proposed action. A consequence is caused by the proposed action if it would not occur but for the proposed action and it is reasonably certain to occur. Effects of the action may occur later in time and may include consequences occurring outside the immediate area involved in the action. (See § 402.17). Under Section 7 of the ESA, if a federal action agency makes a no effect determination, no further consultation with, or concurrence from, the Service is required (ESA §7). If a proposed Federal action may affect a listed species or designated critical habitat, formal consultation is required (except when the Service concurs, in writing, that a proposed action "is

not likely to adversely affect (NLAA)" listed species or designated critical habitat [50 CFR §402.02, 50 CFR§402.13]).

The IPaC results indicated the following species is (are) potentially present in your project area and, based on your responses to the Service's Northeast DKey, you determined the proposed Project will have the following effect determinations:

Species	Listing Status	Determination
Piping Plover (*Charadrius melodus*)	Threatened	No effect
Red Knot (*Calidris canutus rufa*)	Threatened	No effect
Roseate Tern (*Sterna dougallii dougallii*)	Endangered	May affect

Consultation with the Service is not complete. Further consultation or coordination with the Service is necessary for those species or designated critical habitats with a determination of "May Affect". Please contact our Maine Ecological Services Field Office to discuss methods to avoid or minimize potential adverse effects to those species or designated critical habitats.

In addition to the species listed above, the following species and/or critical habitats may also occur in your project area and are not covered by this conclusion:

- Monarch Butterfly *Danaus plexippus* Candidate
- Northern Long-eared Bat *Myotis septentrionalis* Endangered

Please Note: If the Action may impact bald or golden eagles, additional coordination with the Service under the Bald and Golden Eagle Protection Act (BGEPA) (54 Stat. 250, as amended, 16 U.S.C. 668a-d) by the prospective permittee may be required. Please contact the Migratory Birds Permit Office, (413) 253-8643, or PermitsR5MB@fws.gov, with any questions regarding potential impacts to Eagles.

If you have any questions regarding this letter or need further assistance, please contact the Maine Ecological Services Field Office and reference the Project Code associated with this Project.

Action Description
You provided to IPaC the following name and description for the subject Action.

1. Name

University of New England Pier Revised

2. Description

The following description was provided for the project 'University of New England Pier Revised':

> The project involves construction of a permanent pier on the Saco River and an access road to support the University of New England Marine Sciences program. The project will involve clearing approximately 0.3 acres of mixed forested upland and disturbance of 85 square feet intertidal and deep water habitat for pier piles.

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@43.4599768,-70.38240099961078,14z

QUALIFICATION INTERVIEW

1. As a representative of this project, do you agree that all items submitted represent the complete scope of the project details and you will answer questions truthfully?

   Yes

2. Does the proposed project include, or is it reasonably certain to cause, intentional take of listed species?

   Note: This question could refer to research, direct species management, surveys, and/or studies that include intentional handling/encountering, harassment, collection, or capturing of any individual of a federally listed threatened, endangered, or proposed species.

   No

3. Is the action authorized, permitted, licensed, funded, or being carried out by a Federal agency in whole or in part?

   Yes

4. Is the Federal Highway Administration (FHWA), Federal Railroad Administration (FRA), or Federal Transit Administration (FTA) the lead agency for this project?

   No

5. Are you including in this analysis all impacts to federally listed species that may result from the entirety of the project (not just the activities under federal jurisdiction)?

   Note: If there are project activities that will impact listed species that are considered to be outside of the jurisdiction of the federal action agency submitting this key, contact your local Ecological Services Field Office to determine whether it is appropriate to use this key. If your Ecological Services Field Office agrees that impacts to listed species that are outside the federal action agency's jurisdiction will be addressed through a separate process, you can answer yes to this question and continue through the key.

   Yes

6. Are you the lead federal action agency or designated non-federal representative requesting concurrence on behalf of the lead Federal Action Agency?

   Yes

7. Is the lead federal action agency the Environmental Protection Agency (EPA) or Federal Communications Commission (FCC)?

   No

8. Will the proposed project involve the use of herbicide where listed species are present?

   No

9. Are there any caves or anthropogenic features suitable for hibernating or roosting bats within the area expected to be impacted by the project?

   No

10. Does any component of the project associated with this action include structures that may pose a collision risk to **birds** (e.g., land-based or offshore wind turbines, communication towers, high voltage transmission lines, any type of towers with or without guy wires)?

    Note: For federal actions, answer ‘yes’ if the construction or operation of wind power facilities is either (1) part of the federal action or (2) would not occur but for a federal agency action (federal permit, funding, etc.).

    No

11. Does any component of the project associated with this action include structures that may pose a collision risk to **bats** (e.g., land-based wind turbines)?

    Note: For federal actions, answer ‘yes’ if the construction or operation of wind power facilities is either (1) part of the federal action or (2) would not occur but for a federal agency action (federal permit, funding, etc.).

    No

12. Will the proposed project result in permanent changes to water quantity in a stream or temporary changes that would be sufficient to result in impacts to listed species?

    For example, will the proposed project include any activities that would alter stream flow, such as water withdrawal, hydropower energy production, impoundments, intake structures, diversion structures, and/or turbines? Projects that include temporary and limited water reductions that will not displace listed species or appreciably change water availability for listed species (e.g. listed species will experience no changes to feeding, breeding or sheltering) can answer "No". Note: This question refers only to the amount of water present in a stream, other water quality factors, including sedimentation and turbidity, will be addressed in following questions.

    No

13. Will the proposed project affect wetlands where listed species are present?

    This includes, for example, project activities within wetlands, project activities within 300 feet of wetlands that may have impacts on wetlands, water withdrawals and/or discharge of contaminants (even with a NPDES).

    Yes

14. Will the proposed project activities (including upland project activities) occur within 0.5 miles of the water's edge of a stream or tributary of a stream where listed species may be present?

    Yes

15. Will the proposed project directly affect a streambed (below ordinary high water mark (OHWM)) of the stream or tributary where listed species may be present?

    Yes

16. Will the proposed project bore underneath (directional bore or horizontal directional drill) a stream where listed species may be present?

    No

17. Will the proposed project involve a new point source discharge into a stream or change an existing point source discharge (e.g., outfalls; leachate ponds) where listed species may be present?

    No

18. Will the proposed project involve the removal of excess sediment or debris, dredging or in-stream gravel mining where listed species may be present?

    No

19. Will the proposed project involve the creation of a new water-borne contaminant source where listed species may be present?

    Note New water-borne contaminant sources occur through improper storage, usage, or creation of chemicals. For example: leachate ponds and pits containing chemicals that are not NSF/ANSI 60 compliant have contaminated waterways. Sedimentation will be addressed in a separate question.

    No

20. Will the proposed project involve perennial stream loss, in a stream of tributary of a stream where listed species may be present, that would require an individual permit under 404 of the Clean Water Act?

    No

21. Will the proposed project involve blasting where listed species may be present?

    No

22. Will the proposed project include activities that could result in an increase to recreational fishing or potentially affect fish movement temporarily or permanently (including fish stocking, harvesting, or creation of barriers to fish passage)?

    No

23. Will the proposed project involve earth moving that could cause erosion and sedimentation, and/or contamination along a stream or tributary of a stream where listed species may be present?

    NoteAnswer "Yes" to this question if erosion and sediment control measures will be used to protect the stream.

    Yes

24. Will the proposed project involve vegetation removal within 200 feet of a perennial stream bank where listed species may be present?

    Yes

25. Will erosion and sedimentation control Best Management Practices (BMPs) associated with applicable state and/or Federal permits, be applied to the project? If BMPs have been provided by and/or coordinated with and approved by the appropriate Ecological Services Field Office, answer "Yes" to this question.

    Yes

26. Will the proposed project result in changes to beach dynamics that may modify formation of habitat over time?

    Note: Examples of projects that result in changes to beach dynamics include 1) construction of offshore breakwaters and groins; 2) mining of sand from an updrift ebb tidal delta; 3) removing or adding beach sands; and 4) projects that stabilize dunes (including placement of sand fences or planting vegetation).

    No

27. [Hidden Semantic] Is the project area located within the piping plover AOI?

    Automatically answered
    Yes

28. If you have determined that the piping plover is unlikely to occur within your project's action area or that your project is unlikely to have any potential effects on the piping plover, you may wish to make a "no effect" determination for the piping plover. Additional guidance on how to make this decision can be found in the project review section of your local Ecological Services Field Office's website. CBFO: https://www.fws.gov/office/chesapeake-bay-ecological-services/project-review ; MEFO: https://www.fws.gov/office/maine-ecological-services ; NJFO: https://www.fws.gov/office/new-jersey-ecological-services/new-jersey-field-office-project-review-guide ; NEFO: https://www.fws.gov/office/new-england-ecological-services/endangered-species-project-review#Step5 ; WVFO: https://www.fws.gov/office/west-virginia-ecological-services/project-planning. If you are unsure, answer "No" and continue through the key.

    Would you like to make a no effect determination for the piping plover?

    Yes

29. [Hidden Semantic] Is the project area located within the piping plover AOI?

    Automatically answered
    Yes

30. [Hidden Semantic] Is the project area located within the red knot AOI?

    Automatically answered
    Yes

31. If you have determined that the red knot is unlikely to occur within your project’s action area or that your project is unlikely to have any potential effects on the red knot, you may wish to make a “no effect” determination for the red knot. Additional guidance on how to make this decision can be found in the project review section of your local Ecological Services Field Office's website. CBFO: https://www.fws.gov/office/chesapeake-bay-ecological-services/project-review ; MEFO: https://www.fws.gov/office/maine-ecological-services ; NJFO: https://www.fws.gov/office/new-jersey-ecological-services/new-jersey-field-office-project-review-guide ; NEFO: https://www.fws.gov/office/new-england-ecological-services/endangered-species-project-review#Step5 ; WVFO: https://www.fws.gov/office/west-virginia-ecological-services/project-planning. If you are unsure, answer "No" and continue through the key.

    Would you like to make a no effect determination for the red knot?

    Yes

32. [Hidden Semantic] Is the project area located within the roseate tern AOI?

    Automatically answered
    Yes

33. If you have determined that the roseate tern is unlikely to occur within your project’s action area or that your project is unlikely to have any potential effects on the roseate tern, you may wish to make a “no effect” determination for the roseate tern. Additional guidance on how to make this decision can be found in the project review section of your local Ecological Services Field Office's website. CBFO: https://www.fws.gov/office/chesapeake-bay-ecological-services/project-review ; MEFO: https://www.fws.gov/office/maine-ecological-services ; NJFO: https://www.fws.gov/office/new-jersey-ecological-services/new-jersey-field-office-project-review-guide ; NEFO: https://www.fws.gov/office/new-england-ecological-services/endangered-species-project-review#Step5 ; WVFO: https://www.fws.gov/office/west-virginia-ecological-services/project-planning. If you are unsure, answer "No" and continue through the key.

    Would you like to make a no effect determination for the roseate tern?

    No

34. [Semantic] Does the project intersect the Virginia big-eared bat critical habitat?

    Automatically answered
    No

35. [Semantic] Does the project intersect the Indiana bat critical habitat?

    Automatically answered
    No

36. [Semantic] Does the project intersect the candy darter critical habitat?

    Automatically answered
    No

37. [Semantic] Does the project intersect the diamond darter critical habitat?

    Automatically answered
    No

38. [Semantic] Does the project intersect the Big Sandy crayfish critical habitat?

    Automatically answered
    No

39. [Hidden Semantic] Does the project intersect the Guyandotte River crayfish critical habitat?

    Automatically answered
    No

40. Do you have any other documents that you want to include with this submission?

    Yes

    SUBMITTED DOCUMENTS

    - *UNE MSC APPENDIX B.pdf* *https://ipac.ecosphere.fws.gov/project/5OEXZ4IMIRGHTN6NWQ6DFNIBIY/projectDocuments/126368373*
    - *Photos of bank and shore at pier.pdf* *https://ipac.ecosphere.fws.gov/project/5OEXZ4IMIRGHTN6NWQ6DFNIBIY/projectDocuments/126368441*

PROJECT QUESTIONNAIRE

1. Approximately how many acres of trees would the proposed project remove?

   0.3

2. Approximately how many total acres of disturbance are within the disturbance/ construction limits of the proposed project?

   0.3

3. Briefly describe the habitat within the construction/disturbance limits of the project site.

   The access road area is forested upland with sparse ground cover and trres generally between 3 inches and 10 inches in diameter. The upland comes to a rock face with a drop of approximately 6 to 8 feet high to a cobble beach below that is within the intertidal zone. The cobbles are covered with rock weed growing between the cobbles. Photos of the upland and cobble intertidal zone have been uploaded.

Hi Ian,

So I looked at the letter you generated from using the NLEB determination key. You reached a "not likely to adversely affect" determination, which would then have to be "submitted" to USFWS by the Corps project manager through IPaC once you submit the permit application and supporting materials.

But, you really could have made a "no effect" determination at Question 2 in the dkey since NLEB really are not expected to occur at the project site. I suspect the Corps PM may change the answers in the dkey and go that route. That's their decision to make. You can leave things as is in IPaC and let the Corps make the final decision on no effect or not likely to adversely affect. Either way, section 7 consultation for the NLEB can be completed quickly by the Corps through use of IPaC.

Thanks for your coordination.

Wende

Subject: [EXTERNAL] UNE Pier Project

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Hi Wende,

I have revised the iPAC for this project. I added "revised" onto the title and will archive the old version. I needed to revise some answers that I couldn't edit in the old version. I also added additional information that I gathered from the engineer and by visiting the site in person. In the revised iPAC we have the Rosate tern and NLEB showing up as "may effect".

When I visited the site, I took pictures from the approximate center of the pier looking down at the shore. They are attached. The shore is all intertidal where the pier is going . The intertidal zone meets a vertical rock face of 6 to 8 feet high. At this location, the intertidal zone has cobbles covering 80% of the area and rock weed covering much of the cobbles (and non-cobble areas). Due to this condition, we felt that the Piping plover and the Red knot would not frequent nor nest in this type of setting. We did feel like there was a potential for the Rosate tern to potentially nest in the rock face. The rock face does face north and does not receive much in the way of sun. The upland at the top of the rock face is forested with a sparse herbaceous cover.

We were wondering if you can take a look at the revised iPAC and give us advice on how to proceed. I have added you to the project. Evidently, the permit application is going in next week.

Thanks in advance,

Ian

THIS DOCUMENT, AND THE IDEAS AND DESIGNS INCORPORATED HEREIN, IS AN INSTRUMENT OF PROFESSIONAL SERVICE, IS THE PROPERTY OF GEI CONSULTANTS AND IS NOT TO BE USED, IN WHOLE OR IN PART, FOR ANY OTHER PROJECT WITHOUT THE WRITTEN AUTHORIZATION OF GEI CONSULTANTS.

GEI PROJECT NO. 2203703

PRELIMINARY - NOT FOR CONSTRUCTION - FOR PERMIT

NO.	DATE	ISSUE/REVISION	APP
4	9/14/2023	DEP PERMIT SET	DJB
3	6/28/2023	75% DESIGN SUBMISSION	DJB
2	2/15/2023	30% DESIGN SUBMISSION	DJB
1	12/9/2022	15% DESIGN SUBMISSION, REV	DJB
0	11/11/2022	15% DESIGN SUBMISSION	DJB

STATE OF MAINE
DANIEL J. BANNON
No. 13033
LICENSED PROFESSIONAL ENGINEER
April 22, 2024

DWG. NO.
G-001

SHEET NO.
1 OF 37

COORDINATION OF WORK:

1. THE CONTRACTOR SHALL SCHEDULE ALL ACTIVITIES SO AS TO LIMIT IMPACT TO MARINE AND LANDSIDE USES.
2. WORK SHALL BE COORDINATED WITH THE OWNER AND THEIR REPRESENTATIVES:

UNE:A:A:A:	ANDREW PHILIPPE	207-602-2365 (OFFICE)	207-400-6166 (CELL)
GEI:A:A:B:	DANIEL BANNON	207-347-2372 (OFFICE)	207-671-2583 (CELL)
SDA:A:A:C:	TOM SAUCIER	207-449-4275	

3. WORK IS SUBJECT TO THE FOLLOWING TIME OF YEAR AND TIMING OF ACTIVITY RESTRICTIONS:
   - TO BE DEFINED UPON PERMIT APPROVAL.
4. CONTRACTOR ACCESS TO THE SITE BY WATER SHALL AT NO TIME IMPACT USE OF THE ADJACENT FEDERAL NAVIGATION CHANNEL.
5. THE OWNER WILL PERMIT THE CONTRACTOR TO HAVE A LAYDOWN AREA ON THE UPLAND PROPERTY FOR USE DURING CONSTRUCTION. AN APPROXIMATE LAYDOWN AREA IS SHOWN ON SHEET C-005. THE FINAL LOCATION AND DIMENSIONS OF THE LAYDOWN AREA SHALL BE APPROVED BY THE OWNER.

SITE ENVIRONMENTAL CONTROLS:

1. ALL WORK SHALL BE PERFORMED IN COMPLIANCE WITH CITY, STATE, AND FEDERAL PERMITS. COPIES OF PERMIT APPROVALS ARE PROVIDED IN THE PROJECT MANUAL.

OSHA REQUIREMENTS:

1. PURSUANT TO 26 M.R.S.A. §565, THE CONTRACTOR SHALL ADHERE TO THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS AS PROMULGATED BY THE FEDERAL OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AT 29-CFR PART 1926 AS MOST RECENTLY AMENDED.

EROSION CONTROL:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BOOMS, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL INSTALL AND MAINTAIN A SILTATION BOOM AROUND THE PERIMETER OF THE WORK AREA FOR THE NEW PIER FOR THE DURATION OF WORK.
7. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
8. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
9. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

SITE PREPARATION:

1. CONTRACTOR SHALL INSTALL ALL SIGNAGE PRIOR TO INITIATION OF CONSTRUCTION ACTIVITIES. INCLUDE OWNER PROJECT SIGNAGE AND FEDERAL AND STATE MANDATED WORK PLACE SIGNAGE.
2. CONTRACTOR SHALL HAVE IN-PLACE TRASH AND SANITARY FACILITIES FOR THE WORK PLACE.
3. DISCOVERY OF INCONSISTENT SITE INFORMATION OR CONDITIONS ARE TO BE IMMEDIATELY CONVEYED TO THE OWNER AND ENGINEER PRIOR TO COMMENCING OR CONTINUING CONSTRUCTION.
4. THE CONTRACTOR SHALL NOTIFY DIG SAFE PRIOR TO COMMENCING ANY WORK.
5. LOCATIONS OF EXISTING UTILITIES SHOWN ARE APPROXIMATE. THE CONTRACTOR SHALL VERIFY LOCATIONS OF UTILITIES AS MAY BE REQUIRED. THE CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES OCCURRING AS A RESULT OF THE CONTRACTOR'S FAILURE TO LOCATE AND PROTECT UNDERGROUND UTILITIES. ALL REPAIRS SHALL BE MADE AT THE CONTRACTOR'S EXPENSE.
6. CONTRACTOR SHALL MAINTAIN AND PROTECT ALL EXISTING UTILITIES AND DRAINAGE AT ALL TIMES. THE CONTRACTOR SHALL REPAIR ANY DAMAGE AND RESTORE TO THE PRE-EXISTING CONDITION AT NO COST TO THE OWNER.
7. CONTRACTOR SHALL PROTECT ALL EXISTING STRUCTURES AND SHALL PERFORM THE WORK IN A MANNER THAT AVOIDS DAMAGE TO EXISTING STRUCTURES. STRUCTURES INCLUDE, BUT ARE NOT LIMITED TO, BUILDINGS, PIERS, BULKHEADS, FLOATS, PIER UTILITIES AND FIXTURES, AND RIPRAP SLOPES. CONTRACTOR SHALL REPAIR ANY DAMAGE AT NO ADDITIONAL COST TO THE CITY.
8. CONTRACTOR SHALL SUPPLY ALL NECESSARY TEMPORARY UTILITIES FOR CONSTRUCTION INCLUDING, BUT NOT LIMITED TO; WATER, POWER, LIGHTING, DATA, AND TELEPHONE.
9. CONTRACTOR SHALL READ AND UNDERSTAND ALL REGULATORY CONDITIONS ASSOCIATED WITH THE PROJECT AND SHALL COMPLY WITH ALL ENVIRONMENTAL REQUIREMENTS AND PERMIT CONDITIONS.
10. CONTRACTOR SHALL PROVIDE A CONFINED CONCRETE TRUCK WASHDOWN AREA AT A LOCATION TO BE APPROVED BY THE ENGINEER. WASHDOWN AREA SHALL INCLUDE PROTECTION TO PAVEMENT, A PERIMETER WALL AND A FILTER FABRIC LINER. NO RUNOFF CONTAINING CEMENT OR OTHER SUSPENDED SOLIDS WILL BE PERMITTED. ALL MATERIALS SHALL BE COMPLETELY REMOVED UPON COMPLETION OF CONSTRUCTION AND DISPOSED OF AT AN APPROVED DISPOSAL LOCATION.

CODES:

1. MAINE DOT STANDARD SPECIFICATIONS, MARCH 2020 ED. WITH SUPPLEMENTAL SPECIFICATIONS THROUGH JUNE 16,2023.
2. MAINE UNIFORM BUILDING AND ENERGY CODE (MUBEC).
3. AMERICAN CONCRETE INSTITUTE (ACI) 318-14: BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE, 2014 ED.
4. CONCRETE REINFORCING STEEL INSTITUTE (CRSI):
5. AMERICAN INSTITUTE FOR STEEL CONSTRUCTION (AISC) STEEL CONSTRUCTION MANUAL, 15TH ED.
6. ALUMINUM ASSOCIATION, ALUMINUM DESIGN MANUAL, 2015 ED.
7. AMERICAN WOOD COUNCIL, NATIONAL DESIGN SPECIFICATIONS (NDS) FOR WOOD CONSTRUCTION, 2015 ED.

SITE CONTROL AND BASELINES:

1. PROJECT BASE PLAN HAS BEEN DEVELOPED FROM A COMPILATION OF MULTIPLE SURVEYS AS DESCRIBED UNDER "SURVEY AND PROPERTY NOTES".
2. ELEVATIONS ARE PROVIDED IN NAVD88 VERTICAL DATUM UNLESS OTHERWISE NOTED.
3. THE CONTRACTOR SHALL INSTALL SURVEY CONTROL AS NECESSARY TO PERFORM THE WORK. PERMANENT SURVEY CONTROL (AT LEAST 2 POINTS) SHALL BE ESTABLISHED FOR THE PROJECT AND PROTECTED FROM DAMAGE DURING CONSTRUCTION AND PROVIDED ON AS-BUILT DRAWINGS.
4. THE CONTRACTOR SHALL ESTABLISH AND MAINTAIN PROJECT BASELINES AND CONTROL AS REQUIRED TO ENSURE ACCURATE LOCATION OF ALL ELEMENTS OF THE PROJECT.

SURVEY AND PROPERTY NOTES:

1. LOCUS PARCEL IS DEPICTED ON CITY OF BIDDEFORD, TAX MAP 52, LOT 4 AND IS LOCATED IN THE INSTITUTIONAL (IN) ZONE. A PORTION OF THE SITE IS LOCATED IN THE LIMITED RESIDENTIAL (LR) SHORELAND OVERLAY DISTRICT.
2. THE RECORD OWNER IS THE UNIVERSITY OF NEW ENGLAND, BY DEED DATED APRIL 18, 1962, RECORDED IN THE YORK COUNTY REGISTRY OF DEEDS IN BOOK 1484, PAGE 0145.
3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM AND CONTROL POINTS PROVIDED BY UNE.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

CONCRETE

1. CAST IN PLACE CONCRETE SHALL CONFORM TO THE FOLLOWING SPECIFICATIONS BASED ON THE MAINE DOT STANDARD SPECIFICATION:

LOCATION	MDOT CLASS	f'c
ALL CONCRETE	CLASS LP	5,000 PSI

2. ALL REINFORCEMENT SHALL BE NEW DEFORMED BARS, GRADE 60 CONFORMING TO ASTM A615, HOT DIP GALVANIZED ACCORDING TO ASTM A767/A767M OR ASTM A1094/A1094M.
3. REINFORCEMENT ACCESSORIES SHALL BE DIELECTRIC COATED STEEL OR APPROVED PLASTIC.
3. GROUT SHALL BE A HIGH STRENGTH, NON-SHRINK GROUT WITH SALT WATER RESISTANCE.
4. CONCRETE COVER SHALL BE A MINIMUM OF 3 INCHES UNLESS NOTED OTHERWISE.
5. ALL EXPOSED EDGES OF CONCRETE AT COLD JOINTS SHALL HAVE A ROUGHENED FINISH AND BE COATED WITH EPOXY BONDING AGENT PRIOR TO CASTING ADJACENT POUR.
6. PROVIDE 1 INCH CHAMFER ON ALL EXPOSED EDGES UNLESS NOTED OR DIRECTED OTHERWISE.
7. TOP SURFACE OF EXPOSED CONCRETE SHALL RECEIVE A BROOM FINISH.
8. COAT FINISHED SURFACES OF CONCRETE WITH A 100% SILANE PENETRATING CONCRETE SEALER SUITABLE FOR USE IN A MARINE ENVIRONMENT. SEALER SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.
9. REINFORCEMENT DEVELOPMENT AND LAP SPLICE LENGTHS SHALL BE IN ACCORDANCE WITH ACI 318.
10. CONCRETE MIX DESIGN SHALL INCLUDE THE USE OF CORROSION INHIBITING ADMIXTURE AT DOSAGE SUITABLE FOR USE IN AN AGGRESSIVE MARINE ENVIRONMENT. CORROSION INHIBITOR SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.

EPOXY ANCHORS

1. ANCHOR ROD, WASHERS, AND NUTS SHALL CONFORM TO ASTM F1554, GRADE 36, AND SHALL BE HOT DIP GALVANIZED.
2. THE MINIMUM EDGE DISTANCE AND MINIMUM SPACING FOR ALL ANCHORS SHALL BE 6 BOLT DIAMETERS.
3. ALL HOLES SHALL BE DRILLED TO THE RECOMMENDED DIAMETER PER MANUFACTURERS REQUIREMENTS USING CARBIDE DRILL BITS MEETING ANSI B212.5-1994.
4. HOLES SHALL BE BRUSHED WITH NYLON BRUSH AND BLOWN CLEAN USING OIL-FREE COMPRESSED AIR A MINIMUM OF TWO TIMES.
5. ALL HOLES SHALL BE FREE OF STANDING WATER BEFORE INSTALLING ANCHORS.
6. EPOXY SHALL HAVE MINIMUM BOND STRENGTH OF 1,600 PSI @ 14 DAYS.

EARTHWORK

1. EARTHWORK MATERIALS SHALL MEET THE FOLLOWING SPECIFICATIONS:

AGGREGATE BASE	TYPE A (MDOT 703.06A)
AGGREGATE SUBBASE	TYPE D (MDOT 703.06C)
WALL BACKFILL	CRUSHED STONE $\frac{3}{4}$" (MDOT 703.13)
DRAINAGE STONE	CRUSHED STONE 2 INCH (MDOT 703.31)
ORDINARY BORROW	SEE #2 BELOW.

2. ORDINARY BORROW SHALL BE EXISTING GRANULAR SOIL WITH MAXIMUM 4 INCH STONE SUBJECT TO APPROVAL BY THE ENGINEER. ALL DEBRIS OR OTHER DELETERIOUS MATERIALS SHALL BE REMOVED FROM ORDINARY BORROW PRIOR TO REUSE.

STEEL

1. STEEL ANGLE, STRAPS, AND MISCELLANEOUS FABRICATIONS SHALL BE ASTM A36 HOT DIP GALVANIZED AFTER FABRICATION, UNLESS OTHERWISE NOTED.
2. ALL FASTENERS SHALL BE HOT-DIP GALVANIZED OR STAINLESS STEEL.
3. ALL BOLTS SHALL CONFORM TO ASTM A307. MINIMUM SIZE SHALL BE $\frac{5}{8}$ INCH UNLESS OTHERWISE NOTED.

HEAVY TIMBER

1. UNLESS OTHERWISE SPECIFIED, ALL TIMBER FRAMING TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NDS 2015.
2. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS UNLESS OTHERWISE NOTED.
3. ALL NEW SOUTHERN YELLOW PINE TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.60 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
4. ALL EXPOSED EDGES SHALL BE PLANED OR SANDED TO PROVIDE SMOOTH SURFACE FREE OF ROUGH EDGES OR DEFECTS.
5. ALL EXPOSED FASTENERS SHALL BE COUNTERSUNK.
6. DOCK WASHERS SHALL BE PROVIDED BENEATH NUT OR BOLT HEAD OF ALL TIMBER BOLTED CONNECTIONS. TIMBER BOLTS SHALL BE CONSIDERED AN ACCEPTABLE ALTERNATIVE TO HEX HEADED BOLTS WITH DOCK WASHERS.
7. STANDARD WASHERS SHALL BE PERMISSIBLE WHERE CONNECTED PARTS INCLUDE STEEL PLATES, ANGLES, BRACKETS, OR BACKER PLATES.

TIMBER PILES

1. TIMBER PILES SHALL BE TROPICAL GREENHEART AND SHALL CONFORM TO ASTM D25.
2. PROVIDE PROTECTION TO PILE TIP AND BUTT TO AVOID DAMAGE DURING DRIVING.
3. PILES SHALL BE ORDERED MINIMUM 5 FT LONGER THAN TABULATED LENGTHS TO ALLOW FOR INSTALLATION VARIABILITY AND CUTOFF.
4. ALL TIMBER PILES SHALL BE DRIVEN TO THE MINIMUM EMBEDMENT OR CAPACITY CRITERIA INDICATED IN THE PILE SCHEDULE. FENDER PILES MAY BE INSTALLED TO THE REQUIRED DEPTH USING A VIBRATORY HAMMER. IN THE EVENT THAT A VIBRATORY HAMMER IS UNABLE TO ACHIEVE THE MINIMUM REQUIRED EMBEDMENT, THE CONTRACTOR WILL BE RESPONSIBLE FOR COMPLETING FINAL SET USING AN IMPACT HAMMER.
5. GREENHEART PILES SHALL BE BANDED WITH $1\frac{1}{2}$ INCH STAINLESS STEEL UTILITY STRAPPING PRIOR TO CUTOFF. REFER TO DETAIL ON SHEET S-009.

ASPHALT

1. PAVING GRADES SHALL PITCH TO EXISTING STRUCTURES.
2. PAVEMENT SHALL CONSIST OF 4" OF HOT MIX ASPHALT PLACED IN TWO COURSES, SEE DETAIL.
3. CONTRACTOR TO SAW CUT PAVEMENT AT LIMIT OF REMOVAL.
4. CONTRACTOR TO PROVIDE SMOOTH TRANSITIONS BETWEEN NEW AND EXISTING ASPHALT.
5. CONTRACTOR TO SEAL JOINT BETWEEN NEW AND EXISTING ASPHALT WITH BITUMINOUS JOINT SEALANT.

GEOTEXTILE

1. GEOTEXTILE SEPARATION FABRIC SHALL BE MIRAFI FW700 OR EQUIVALENT.
2. OVERLAP ALL SEAMS MINIMUM 2 FT.
3. INSTALL PER MANUFACTURERS RECOMMENDATIONS.

STEEL PIPE PILES

1. STEEL PIPE PILES SHALL CONFORM TO ASTM A252, GRADE 3.
2. ALL PILES SHALL BE SEAMLESS.
3. AN OPEN CUTTING SHOE IS REQUIRED.
4. PIPE PILES SHALL BE COATED WITH FUSION BONDED EPOXY, COLOR BROWN. MINIMUM COATING THICKNESS SHALL BE 18-20 MIL. COATING SHALL EXTEND FROM TOP OF PILE DOWN TO MINIMUM 5-FEET BELOW GRADE.
5. DAMAGE TO ANY STEEL COATING SHALL BE TOUCHED UP BY THE CONTRACTOR USING APPROVED MATERIALS AND METHODS.
6. ALL PILES SHALL BE FILLED TO THE TOP WITH CONCRETE AFTER INSTALLATION. ROCK-SOCKETED PILES SHALL BE CLEANED OUT AND FILLED FOR THEIR ENTIRE LENGTH PRIOR TO CONCRETE FILLING. DRIVEN PILES SHALL BE CLEANED OUT TO MINIMUM 10-FEET BELOW ADJACENT MUDLINE.
7. REFER TO PILE SCHEDULE ON SHEET S-005 FOR ESTIMATED PILE LENGTHS, COATING LENGTHS, SIZES, AND SOCKETING REQUIREMENTS.

TIMBER FLOATS

1. FLOAT MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF FLOAT FRAMING AND DRUM LAYOUT TO MEET BOUYANCY, LOADING, AND ENVIRONMENTAL EXPOSURE REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. UNLESS OTHERWISE SPECIFIED, ALL TIMBER TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NFPA NATIONAL DESIGN SPECIFICATION OR THE EQUIVALENT FOR DOUGLAS FIR AS GRADED BY WCLIB AND WWPA.
3. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS.
4. ALL TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.40 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
5. DECKING SHALL BE NO. 1 SOUTHERN PINE, MINIMUM SIZE 2X6.
6. MISC. HARDWARE: GALVANIZED STEEL PLATES AND ALL BOLTS AND RELATED HARDWARE SHALL BE FASHIONED FROM STEEL AND GALVANIZED AFTER FABRICATION AND IN ACCORDANCE WITH REQUIREMENTS OF ASTM A123, AND/OR A153. BOLTS AND NUTS SHALL CONFORM TO ASTM A307.
7. CONNECTION HARDWARE SHALL BE FABRICATED FROM ASTM-A36 GRADE STEEL WITH MINIMUM THICKNESS ¼".
8. PROVIDE GUIDE/WEARING BRACKETS AT GANGWAY LANDING ON FLOAT 'C' PER DETAIL A ON SHEET S-012. BRACKETS SHALL BE LOCATED IN FIELD TO BE CENTERED ON GANGWAY RANGE OF TRAVEL AT MID-TIDE ELEVATION.
9. TRANSITIONS BETWEEN FLOATING DOCKS SHALL INCLUDE ADA COMPLIANT TRANSITION PLATES ACROSS GAPS AT HINGE LOCATIONS.
10. FLOATING DOCKS SHALL MEET THE FOLLOWING LOADING AND FREEBOARD CRITERIA:

DEAD LOAD	20 INCH FREEBOARD
20 PSF UNIFORM LIVE LOAD	MINIMUM 8 INCH FREEBOARD
40 PSF UNIFORM LIVE LOAD	MINIMUM ZERO FREEBOARD

DEAD LOADS SHALL INCLUDE ALL COMPONENTS AND ATTACHMENTS INCLUDING WEIGHT OF ALUMINUM GANGWAY BEARING ON FLOAT 'C'.

ALUMINUM GANGWAY

1. GANGWAY MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF GANGWAY FRAMING AND CONFIGURATION TO MEET STRUCTURAL, PERFORMANCE, AND ACCESSIBILITY REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. GANGWAY SHALL MEET THE FOLLOWING LOADING AND DEFLECTION CRITERIA:
   - DEAD LOAD SHALL CONSIST OF WEIGHT OF THE ENTIRE GANGWAY STRUCTURE PLUS ANY UTILITIES AND ATTACHMENTS.
   - ALLOWABLE STRESSES IN DECK SURFACE, GANGWAY FRAMING, AND MOUNTING COMPONENTS SHALL NOT BE EXCEEDED AT A UNIFORM LIVE LOAD OF 100 PSF.
   - 50 PSF UNIFORM LIVE LOAD MAX. DEFLECTION L/360
   - 100 PSF UNIFORM LIVE LOAD MAX. DEFLECTION NOT TO EXCEED GANGWAY CAMBER
   - ALL HANDRAIL AND POSTS SHALL BE DESIGNED TO WITHSTAND A 200 LB LOAD APPLIED IN ANY DIRECTION OR A 50 LB/FT LOAD APPLIED ALONG THE HANDRAIL LENGTH.
3. GANGWAY HINGES SHALL BE CAPABLE OF TRAVELING FREELY AND WITHOUT BINDING THROUGH THE ENTIRE RANGE OF WATER LEVELS FROM MLLW TO BASE FLOOD ELEVATION PLUS TWO-FEET OF ADDITIONAL ELEVATION IN EITHER DIRECTION.

3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

NOTES:
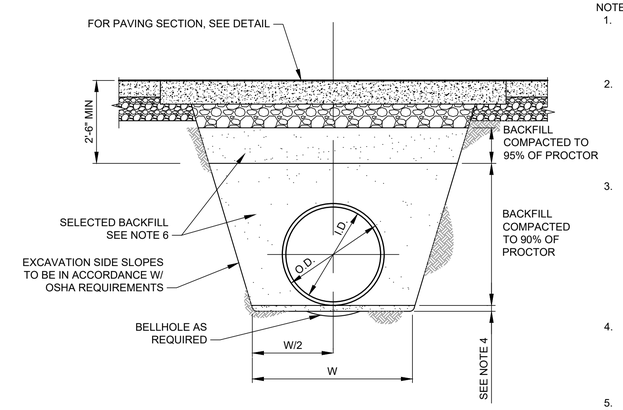
1. PAVEMENT DESIGN SHALL HAVE A MAINEDOT APPROVED JOB MIX FORMULA (JMF) WITHIN THE LATEST CALENDAR YEAR UNLESS OTHERWISE APPROVED BY OWNER.

1 HMA TRAVELWAY/SHOULDER TYPICAL SECTION

NO SCALE

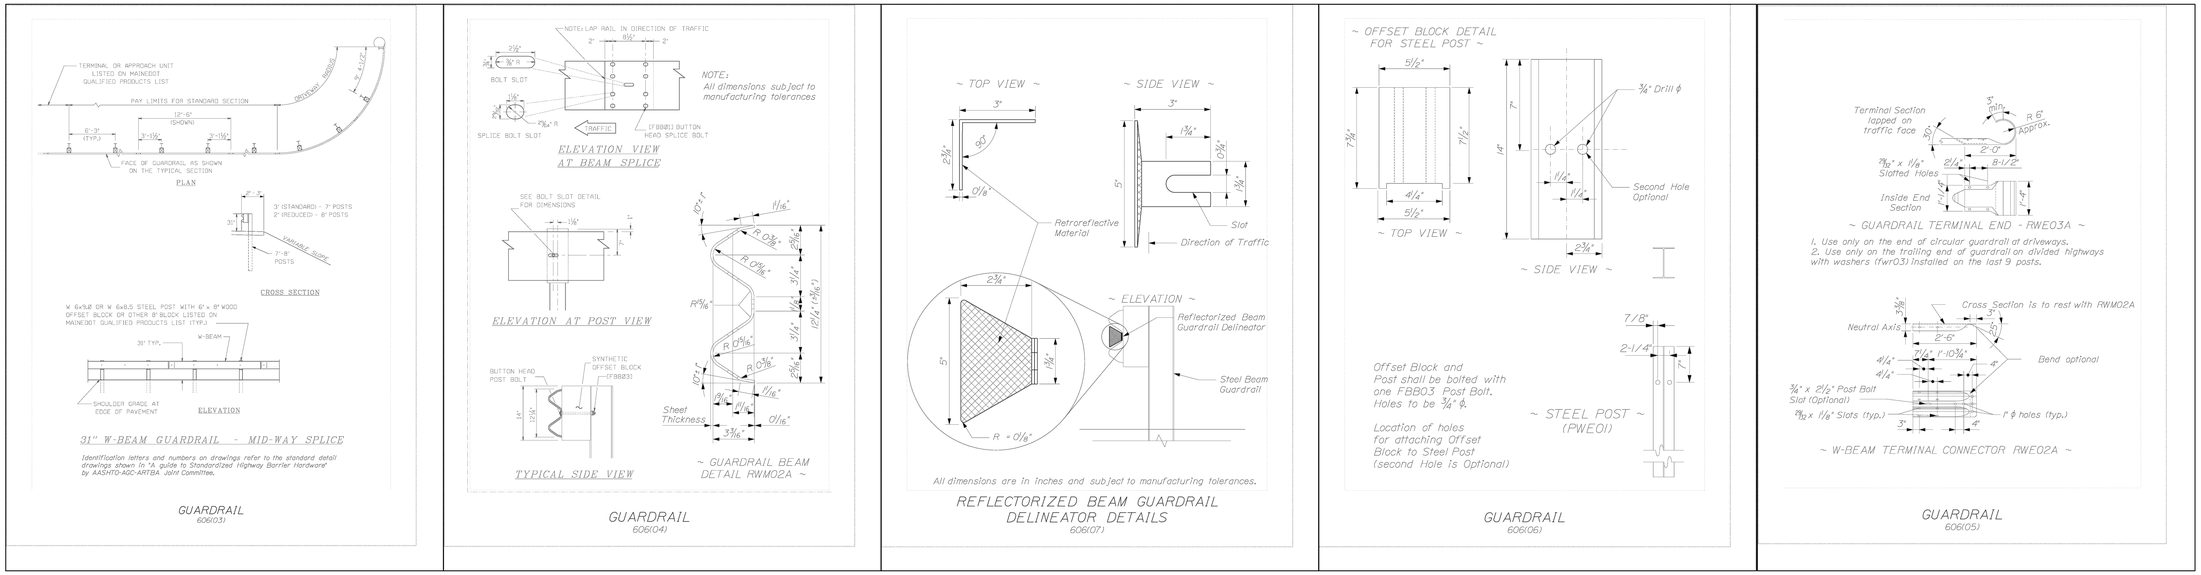


PLUNGE POOL SIZING (minimum)				
SIZE	RIPRAP SIZING (D_{50})	WIDTH At the narrow end of pipe	LENGTH For slow flows (no pressure head)	LENGTH For high flows (with pressure head)
12"	5"	3-4'	4-6'	8-10'
18"	8"	4-6'	6-8'	12-18'
24"	10"	6-8'	8-10'	18-22'
30"	12"	8-10'	12-14'	22-28'
36"	14"	10-12'	14-16'	28-32'

The diameter of the largest stone size in the mix should be about 1.5 times the D_{50} and the smallest one about one half the size. The thickness of riprap should never be less than 2 times the rock D_{50}.

NOTES:
1. IF THE PIPE DISCHARGES ONTO A FLAT AREA, THE APRON SHOULD HAVE A WIDTH THAT IS THREE TIMES THE OUTLET PIPE'S DIAMETER. IF THE PIPE FLOWS HAVE THE POTENTIAL OF CAUSING A GULLY, A LEVEL SPREADER SHOULD BE PROVIDED.
2. THE CHANNEL SIDE SLOPES SHOULD BE NO STEEPER THAN 2:1. RIPRAP ON THE SIDES OF THE PLUNGE POOL SHOULD EXTEND TO THE TOP OF THE CHANNEL.
3. THE PLUNGE POOL SIZING AND THE MEDIAN SIZED RIPRAP CAN BE DETERMINED FROM THE FOLLOWING TABLE. THE THICKNESS OF RIPRAP SHOULD NOT BE LESS THAN 2 TIMES THE ROCK D50.
4. A GEOTEXTILE OR APPROPRIATE GRAVEL FILTER SHOULD BE USED TO PROTECT AGAINST PIPING OF SOIL FINES FROM BENEATH THE ROCK.
5. IN A CHANNEL THAT CAN BE REVEGETATED, SEED AND MULCH SHOULD BE APPLIED WITHIN 7 DAYS FROM FINAL CONSTRUCTION..

2 PLUNGE POOL



NO SCALE

NOTES:
1. TRENCH BOTTOM OR BEDDING FOR ALL PIPE SHALL BE GRADED TO PROVIDE UNIFORM SUPPORT FOR THE ENTIRE LENGTH OF THE PIPE EXCEPT AT BELLHOLES.
2. BELLHOLES FOR PIPES SHALL HAVE A CLEARANCE OF 3" BETWEEN THE BOTTOM OF THE BELLHOLE AND THE EXTERIOR OF THE PIPE BARREL, BUT IN NO CASE SHALL BELLHOLES BE SMALLER THAN REQUIRED TO FACILITATE PLACING OF THE PIPE OR PROPER JOINING OF THE PIPE.
3. COMPACTION BACKFILL SHALL BE COMPACTED TO A DEGREE AT LEAST EQUIVALENT TO THE EXISTING DEGREE OF COMPACTING OF ADJACENT IN-PLACE EARTH MATERIALS AGAINST WHICH SUCH COMPACTED BACKFILL IS TO BE PLACED, OR TO A MIN OF 95% OF THE LABORATORY STANDARD MAX ASTM D698 DENSITY, WHICHEVER IS GREATER.
4. MIN 3" DEEP LAYER OF SCARIFIED MATERIAL WHEN IN HARD MATERIAL. IN UNSUITABLE MATERIAL, OVER EXCAVATE AS DIRECTED BY ENGINEER (6" MIN) AND REPLACE WITH COMPACTED BACKFILL.
5. W = PIPE O.D. + 24" MIN
6. ALL SELECTED BACKFILL IS TO BE IN CONFORMANCE WITH STATE STANDARD SPECIFICATION.

EROSION AND SEDIMENTATION CONTROL NOTES:

INTRODUCTION

THE FOLLOWING PLAN FOR CONTROLLING SEDIMENTATION AND EROSION IN THIS PROJECT IS BASED ON CONSERVATION PRACTICES FOUND IN THE MAINE EROSION & SEDIMENT CONTROL BMPS MANUAL, OCTOBER 2016, AND MAINE EROSION AND SEDIMENT CONTROL PRACTICE FIELD GUIDE FOR CONTRACTORS, REVISED 2014, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION. THE CONTRACTOR WHO IMPLEMENTS THIS PLAN SHALL BE FAMILIAR WITH THESE PUBLICATIONS AND ADHERE TO THEM AND THE PRACTICES PRESENTED HEREIN REFERENCE IS MADE TO THE EROSION CONTROL PLANS AND DETAILS (C-005 AND C-013) WITHIN THE PLAN SET, SHOWING THE LOCATIONS AND TYPES OF PROPOSED MEASURES TO BE IMPLEMENTED.

GENERAL EROSION AND SEDIMENTATION CONTROL NOTES:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BOOMS, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL INSTALL AND MAINTAIN A SILTATION BOOM AROUND THE PERIMETER OF THE WORK AREA FOR THE NEW PIER FOR THE DURATION OF WORK.
7. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
8. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
9. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

GENERAL EROSION AND SEDIMENTATION CONTROL PRACTICES

THE FOLLOWING IS A LIST OF GENERAL EROSION CONTROL PRACTICES THAT WILL BE USED TO PREVENT EROSION AND SEDIMENTATION BEFORE, DURING AND AFTER THE CONSTRUCTION OF THIS PROJECT. IN ADDITION, SPECIAL CARE SHALL BE USED AT ALL TIMES TO:

LIMIT DISTURBANCE AND, HENCE, EROSION

1. CORRECT ANY EROSION PROBLEMS IMMEDIATELY.
2. REGULARLY MONITOR THE IMPLEMENTED PRACTICES, ESPECIALLY AFTER EVERY RAINFALL.
3. REVEGETATE DISTURBED AREAS AS SOON AS POSSIBLE AFTER CONSTRUCTION.
4. CONFORM TO ALL REQUIREMENTS/STANDARDS OF THE SITE'S MAINE DEP EROSION & SEDIMENT CONTROL BMP MANUAL.

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS WILL BE INSTALLED ALONG THE DOWN GRADIENT SIDE OF THE PROPOSED GROUND DISTURBANCE AREAS PRIOR TO ANY CONSTRUCTION ACTIVITIES WHERE SLOPES EXCEED 8% OR THERE IS FLOWING WATER BOTH SILT FENCE AND EROSION CONTROL MATTING BERMS SHALL BE USED.

CATCH BASIN PROTECTION

CATCH BASIN PROTECTION WILL BE INSTALLED AT THE FIRST DOWNGRADIENT CATCH BASIN IN STREET ADJACENT TO ANY CONSTRUCTION ACTIVITIES AND IN ALL ONSITE CATCH BASINS UNTIL SITE HAS BEEN COMPLETELY STABILIZED.

CONSTRUCTION PHASE

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION DURING CONSTRUCTION ON THIS PROJECT:

1. EROSION AND SEDIMENTATION CONTROL BMPS SHALL BE INTALLED PRIOR TO THE COMMENCEMENT OF EARTHWORK ACTIVITIES.
2. ONLY THOSE AREAS UNDER ACTIVE CONSTRUCTION WILL BE CLEARED AND LEFT IN AN UNTREATED OR UNVEGETATED CONDITION. AN AREA NO LARGER THAN WHAT CAN BE MULCHED IN ONE DAY MAY BE OPEN AT ONCE. ONCE CONSTRUCTION OF AN AREA IS COMPLETE, FINAL GRADING, LOAMING AND SEEDING SHALL OCCUR IMMEDIATELY (REFER TO "POST CONSTRUCTION REVEGETATION" SECTION). IF DURING FINAL GRADING, LOAMING AND SEEDING CAN NOT OCCUR IMMEDIATELY, IT SHALL BE DONE PRIOR TO ANY STORM EVENT AND WITHIN 15 DAYS OF COMPLETING CONSTRUCTION IN THE AREA. IF FINAL GRADING, LOAMING AND SEEDING CANNOT OCCUR WITHIN 7 DAYS, OR IF THE AREA IS NOT UNDER ACTIVE CONSTRUCTION FOR A PERIOD LONGER THAN 7 DAYS, SEE ITEM NO. 4 BELOW.
3. PRIOR TO THE START OF CONSTRUCTION IN A SPECIFIC AREA, SILT FENCING SHALL BE INSTALLED ON DOWNGRADIENT PORTIONS OF THE SITE AS LOCATED ON THE PLANS TO PROTECT AGAINST ANY CONSTRUCTION RELATED EROSION.
4. TOPSOIL WILL BE STOCKPILED WHEN NECESSARY IN AREAS WHICH HAVE MINIMUM POTENTIAL FOR EROSION AND WILL BE KEPT AS FAR AS POSSIBLE FROM EXISTING DRAINAGE AREAS AND WETLANDS. ALL STOCKPILES EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH ANCHORED MULCH (WITHIN 5 DAYS OF THE LAST DEPOSIT OF STOCKPILED SOIL).
   B. SEEDED WITH CONSERVATION MIX AND MULCHED IMMEDIATELY.
   C. STOCKPILES SHALL BE EITHER PLACED UPHILL OF AN EXISTING SEDIMENT BARRIER ON THE SITE OR ENCIRCLED BY A HAY BALE OR SILT FENCE BARRIER THE FIRST DAY THAT STOCKPILING COMMENCES.
5. ALL DISTURBED AREAS EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH STRAW AT A RATE OF 70-90 LBS. PER 1000 SQUARE FEET FROM 4/16 TO 10/1, OR AT A RATE OF 150-200 LBS. PER 1000 SQUARE FEET FROM 10/1 TO 4/15.
   B. SEEDED WITH CONSERVATION MIX OF PERENNIAL RYE GRASS (1.0 LBS/1000 SQ.FT.) AND MULCHED IMMEDIATELY. FROM 10/1 TO 4/15, FOLLOW THE SEEDING RATES AS OUTLINED BELOW IN SUB-SECTION 4.D. OF THE "POST CONSTRUCTION REVEGETATION" SECTION.
   C. MONITORED EVERY TWO WEEKS UNTIL SEEDING CAN OCCUR AND REMULCHED AS NEEDED TO PROTECT SLOPES.
6. ALL GRADING WILL BE HELD TO A MAXIMUM 3:1 SLOPE WHERE PRACTICAL. GREATER SLOPES MAY BE USED WHERE THE BANKS ARE PROTECTED WITH SOFT ARMOUR MATTING, EROSION CONTROL MATTING, OR RIPRAP. ALL SLOPES WILL BE STABILIZED WITH PERMANENT SEEDING IMMEDIATELY AFTER FINAL GRADING IS COMPLETE. (IT IS UNDERSTOOD THAT IMMEDIATELY MEANS WITHIN 5 DAYS OF THE COMPLETION OF WORK. SEE POST-CONSTRUCTION REVEGETATION FOR SEEDING SPECIFICATION).
7. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
8. CONSTRUCTION TRAFFIC WILL BE DIRECTED OVER THE EXISTING SITE ENTRANCE. THE ROAD SHALL BE SWEPT AND VACUUMED DAILY SHOULD SEDIMENT BE TRACKED ONTO IT.
9. ALL AREAS DRAINING TO A STORMWATER FILTER OR BMP SHALL BE STABILIZED PRIOR TO CONSTRUCTION OF FILTER MEDIA TO PREVENT SEDIMENT FROM CLOGGING MEDIA.

DEWATERING

1. ALL DEWATERING DISCHARGE LOCATIONS SHALL BE LOCATED ON RELATIVELY FLAT GROUND AT LEAST 75' FROM STREAMS AND 25' FROM WETLANDS. THE CONTRACTOR SHALL UTILIZE DIRTBAGS, EROSION CONTROL MIX BERMS, OR SIMILAR METHODS FOR FILTRATION OF DEWATERING AND SHALL CONFORM TO THE MAINE EROSION AND SEDIMENT CONTROL BMPS G-1, G-2, AND G-3.

POST CONSTRUCTION REVEGETATION

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION AS SOON AS AN AREA IS READY TO UNDERGO FINAL GRADING:

1. A MINIMUM OF 6" OF LOAM WILL BE SPREAD OVER DISTURBED AREAS AND GRADED TO A UNIFORM DEPTH AND NATURAL APPEARANCE.
2. LAWN AREAS: "PARK MIX" GRASS SEED BY ALLEN, STERLING & LOTHROP (FALMOUTH, MAINE), OR APPROVED EQUAL.
3. MULCH SHALL BE HAY OR STRAW MULCHES THAT ARE DRY AND FREE FROM UNDESIRABLE SEEDS AND COURSE MATERIALS.
   A. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE.
   B. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
   C. BLANKET WITH TACKED PHOTODEGRADABLE/BIODEGRADABLE NETTING ON GRADES GREATER THAN 5%.
4. HYDRO-MULCH SHALL CONSIST OF A MIXTURE OF ASPHALT, WOOD FIBRE OR PAPER FIBRE AND WATER, WHICH IS SPRAYED OVER A SEEDED AREA. HYDRO-MULCH SHALL NOT BE USED BETWEEN 10/1 AND 4/15.
5. CONSTRUCTION SHALL BE PLANNED TO ELIMINATE THE NEED FOR SEEDING BETWEEN OCTOBER 1ST AND APRIL 15TH. SHOULD SEEDING BE NECESSARY BETWEEN THESE DATES, THE FOLLOWING PROCEDURE SHALL BE FOLLOWED:
   A. ONLY UNFROZEN LOAM SHALL BE USED.
   B. LOAMING, SEEDING AND MULCHING WILL NOT BE DONE OVER SNOW OR ICE COVER. IF SNOW EXISTS, IT MUST BE REMOVED PRIOR TO PLACEMENT OF SEED.
   C. WHERE PERMANENT SEEDING IS NECESSARY, ANNUAL WINTER RYE (1.2 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   D. WHERE TEMPORARY SEEDING IS REQUIRED, ANNUAL WINTER RYE (2.5 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   E. FERTILIZING, SEEDING AND MULCHING SHALL BE DONE ON LOAM THE DAY THE LOAM IS SPREAD.
   F. HAY MULCH SHALL BE SECURED WITH PHOTODEGRADABLE/BIODEGRADABLE NETTING. TRACKING BY MACHINERY ALONE WILL NOT SUFFICE. WINTER MULCHING RATES, SHALL BE DOUBLE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION, SHOULD BE APPLIED DURING THIS PERIOD.
6. FOLLOWING FINAL SEEDING, THE SITE WILL BE INSPECTED EVERY 30 DAYS UNTIL 90% COVER HAS BEEN ESTABLISHED. RESEEDING WILL BE CARRIED OUT BY THE CONTRACTOR WITHIN 10 DAYS OF NOTIFICATION BY THE DESIGN PROFESSIONAL THAT THE EXISTING CATCH IS INADEQUATE.

MONITORING SCHEDULE

THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING, MONITORING, MAINTAINING, REPAIRING, REPLACING AND REMOVING ALL OF THE EROSION AND SEDIMENTATION CONTROLS OR APPOINTING A QUALIFIED SUBCONTRACTOR TO DO SO. MAINTENANCE MEASURES WILL BE APPLIED AS NEEDED DURING THE ENTIRE CONSTRUCTION CYCLE. IMMEDIATELY FOLLOWING ANY SIGNIFICANT RAINFALL, AND AT LEAST ONCE A WEEK, A VISUAL INSPECTION WILL BE MADE OF ALL EROSION AND SEDIMENTATION CONTROLS AS FOLLOWS:

1. SILT FENCE SHALL BE INSPECTED AND REPAIRED. SEDIMENT TRAPPED BEHIND THESE BARRIERS SHALL BE EXCAVATED WHEN IT REACHES A DEPTH OF 6" AND REDISTRIBUTED TO AREAS UNDERGOING FINAL GRADING.
2. CONSTRUCTION ENTRANCE SHALL BE VISUALLY INSPECTED AND REPAIRED AS NEEDED. ANY AREAS SUBJECT TO RUTTING SHALL BE STABILIZED IMMEDIATELY. IF THE VOIDS OF THE CONSTRUCTION ENTRANCE BECOME FILLED WITH MUD, MORE CRUSHED STONE SHALL BE ADDED AS NEEDED. THE PUBLIC ROADWAY SHALL BE SWEPT AND VACUUMED SHOULD MUD BE DEPOSITED/TRACKED ONTO THEM.

STANDARDS FOR STABILIZING SITES FOR THE WINTER

THE FOLLOWING STANDARDS AND METHODOLOGIES SHALL BE USED FOR STABILIZING THE SITE DURING THE WINTER CONSTRUCTION PERIOD:

1. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SLOPES (ANY AREA HAVING A GRADE GREATER THAN 25%) - THE CONTRACTOR WILL SEED AND MULCH ALL SLOPES TO BE VEGETATED BY SEPTEMBER 15TH. IF THE CONTRACTOR FAILS TO STABILIZE ANY SLOPE TO BE VEGETATED BY SEPTEMBER 15TH, THEN THE CONTRACTOR WILL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE SLOPE FOR LATE FALL AND WINTER.
   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION AND EROSION CONTROL MATS: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SLOPE WITH WINTER RYE AT A RATE OF 3 POUNDS PER 1000 SQUARE FEET AND THEN INSTALL EROSION CONTROL MATS OR ANCHORED HAY MULCH OVER THE SEEDING AT TWICE THE RATE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS.
   B. STABILIZE THE SLOPE WITH WOOD-WASTE COMPOST: THE CONTRACTOR WILL PLACE A SIX-INCH LAYER OF WOOD-WASTE COMPOST ON THE SLOPE BY NOVEMBER 15TH. THE CONTRACTOR WILL NOT USE WOOD-WASTE COMPOST TO STABILIZE SLOPES HAVING GRADES GREATER THAN 50% (2H:IV) OR HAVING GROUNDWATER SEEPS ON THE SLOPE FACE.
   C. STABILIZE THE SLOPE WITH STONE RIPRAP: THE CONTRACTOR WILL PLACE A LAYER OF STONE RIPRAP ON THE SLOPE BY NOVEMBER 15TH. THE DEVELOPMENT'S OWNER WILL HIRE A REGISTERED PROFESSIONAL ENGINEER TO DETERMINE THE STONE SIZE NEEDED FOR STABILITY ON THE SLOPE AND TO DESIGN A FILTER LAYER FOR UNDERNEATH THE RIPRAP.

STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SOILS - BY SEPTEMBER 15TH THE CONTRACTOR WILL SEED AND MULCH ALL DISTURBED SOILS ON THE SITE. IF THE CONTRACTOR FAILS TO STABILIZE THESE SOILS BY THIS DATE, THEN THE CONTRACTOR WILL TAKE ON OF THE FOLLOWING ACTIONS TO STABILIZE THE SOIL FOR LATE FALL AND WINTER.

   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SOIL WITH WINTER RYE AT A SEEDING RATE OF 3 POUNDS PER 1000 SQUARE FEET, LIGHTLY MULCH THE SEEDED SOIL WITH HAY OR STRAW AT 75 POUNDS PER 1000 SQUARE FEET, AND ANCHOR THE MULCH WITH PLASTIC NETTING. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS. IF THE RYE FAILS TO GROW AT LEAST THREE INCHES OR FAILS TO COVER AT LEAST 75% OF THE DISTURBED SOIL BEFORE NOVEMBER, 1, THEN THE CONTRACTOR WILL MULCH THE AREA FOR OVER-WINTER PROTECTION AS DESCRIBED IN ITEM III OF THIS STANDARD.
   B. STABILIZE THE SOIL WITH SOD: THE CONTRACTOR WILL STABILIZE THE DISTURBED SOIL WITH PROPERLY INSTALLED SOD BY OCTOBER 1ST. PROPER INSTALLATION INCLUDES THE CONTRACTOR PINNING THE SOD ONTO THE SOIL WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, AND WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL.
   C. STABILIZE THE SOIL WITH MULCH: BY NOVEMBER 15TH THE CONTRACTOR WILL MULCH THE DISTURBED SOIL BY SPREADING HAY OR STRAW AT A RATE OF AT LEAST 150 POUNDS PER 1000 SQUARE FEET ON THE AREA SO THAT NO SOIL IS VISIBLE THROUGH THE MULCH. IMMEDIATELY AFTER APPLYING THE MULCH, THE CONTRACTOR WILL ANCHOR THE MULCH WITH NETTING OR OTHER METHOD TO PREVENT WIND FROM MOVING THE MULCH OFF THE DISTURBED SOIL.

EROSION CONTROL REMOVAL

AN AREA IS CONSIDERED STABLE IF IT IS PAVED OR IF 90% GROWTH OF PLANTED SEEDS IS ESTABLISHED. ONCE AN AREA IS CONSIDERED STABLE, THE EROSION CONTROL MEASURES CAN BE REMOVED AS FOLLOWS:

1. SILT FENCE: SILT FENCE SHALL BE DISPOSED OF LEGALLY AND PROPERLY OFF-SITE. ALL SEDIMENT TRAPPED BEHIND THESE CONTROLS SHALL BE DISTRIBUTED TO AN AREA UNDERGOING FINAL GRADING OR REMOVED AND RELOCATED OFF-SITE.
2. STABILIZED CONSTRUCTION ENTRANCE: THE STABILIZED CONSTRUCTION ENTRANCE SHALL BE REMOVED ONCE THE COMPACTED ROADWAY BASE IN IN PLACE. STONE AND SEDIMENT FROM THE CONSTRUCTION ENTRANCE SHALL BE REDISTRIBUTED TO AN AREA UNDERGOING GRADING OR REMOVED AND RELOCATED OFFSITE.
3. MISCELLANEOUS: ONCE ALL THE TRAPPED SEDIMENTS HAVE BEEN REMOVED FROM THE TEMPORARY SEDIMENTATION DEVICES THE DISTURBED AREAS MUST BE REGRADED IN AN AESTHETIC MANNER TO CONFORM TO THE SURROUNDING TOPOGRAPHY. ONCE GRADED THESE DISTURBED AREAS MUST BE LOAMED (IF NECESSARY), FERTILIZED, SEEDED AND MULCHED IN ACCORDANCE WITH THE RATES PREVIOUSLY STATED.

THE ABOVE EROSION CONTROLS MUST BE REMOVED WITHIN 30 DAYS OF FINAL STABILIZATION OF THE SITE. CONFORMANCE WITH THIS PLAN AND FOLLOWING THESE PRACTICES WILL RESULT IN A PROJECT THAT COMPLIES WITH THE STATE REGULATIONS AND THE STANDARDS OF THE NATURAL RESOURCES PROTECTION ACT, AND WILL PROTECT WATER QUALITY IN AREAS DOWNSTREAM ROM THE PROJECT.

MAINE CONSTRUCTION GENERAL PERMIT REQUIRED

SUBMISSION OF A MAINE CONSTRUCTION GENERAL PERMIT (MCGP) IS REQUIRED PRIOR TO COMMENCEMENT OF ANY EXCAVATION ACTIVITIES.

INSPECTION AND MAINTENANCE (APPENDIX B)

1. INSPECTION AND MAINTENANCE REQUIREMENTS: INSPECT DISTURBED AND IMPERVIOUS AREAS, EROSION AND STORMWATER CONTROL MEASURES, AREAS USED FOR STORAGE THAT ARE EXPOSED TO PRECIPITATION, AND LOCATIONS WHERE VEHICLES ENTER OR EXIT THE SITE. INSPECT THESE AREAS AT LEAST ONCE A WEEK AS WELL AS BEFORE AND AFTER A SIGNIFICANT STORM EVENT (0.5 INCHES OF RAINFALL IN A 24-HOUR PERIOD) AND PRIOR TO COMPLETION OF PERMANENT STABILIZATION MEASURES. A PERSON WITH KNOWLEDGE OF EROSION AND STORMWATER CONTROL, INCLUDING THE STANDARDS IN THE MCGP AND ANY DEPARTMENTAL COMPANION DOCUMENT TO THE MCGP, MUST CONDUCT THE INSPECTION. THIS PERSON MUST BE IDENTIFIED IN THE INSPECTION LOG. IF BEST MANAGEMENT PRACTICES (BMPS) NEED TO BE MODIFIED OR IF ADDITIONAL BMPS ARE NECESSARY, IMPLEMENTATION MUST BE STARTED BY THE END OF THE NEXT WORKIN DAY AND COMPLETED WITHIN 7 CALENDAR DAYS AND PRIOR TO ANY STORM EVENT (RAINFALL). ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS AREA PERMANENTLY STABILIZED. DOCUMENTATION OF CORRECTION ACTIONS SHALL BE MAINTAINED WITH THE INSPECTION FORMS.
2. INSPECTION LOG (REPORT): A LOG (REPORT) MUST BE KEPT SUMMARIZING THE SCOPE OF THE INSPECTION, NAME(S) AND QUALIFICATIONS OF THE PERSONNEL MAKING THE INSPECTION, THE DATE(S) OF THE INSPECTION, AND MAJOR OBSERVATIONS RELATING TO OPERATION OF EROSION AND SEDIMENTATION CONTROLS AND POLLUTION PREVENTION MEASURES. MAJOR OBSERVATIONS MUST INCLUDE BMPS THAT NEED MAINTENANCE, BMPS THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATIONS(S) WHERE ADDITIONAL BMPS ARE NEEDED. FOR EACH BMP REQUIRING MAINTENANCE, BMP NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL BMPS, NOTE IN THE INSPECTION LOG THE CORRECT ACTION TAKEN AND WHEN IT WAS TAKEN. THE LOG MUST BE MADE ACCESSIBLE TO THE DEPARTMENT STAFF AND A COPY MUST BE PROVIDED UPON REQUEST. THE PERMITTEE SHALL RETAIN A COPY OF THE LOG FOR A PERIOD OF AT LEAST THREE YEARS FROM THE COMPLETION OF THE PERMANENT STABILIZATION.

HOUSEKEEPING (APPENDIX C)

1. SPILL PREVENTION: CONTROLS MUST BE USED TO PREVENT POLLUTANTS FROM CONSTRUCTION AND WASTE MATERIALS STORED ON SITE TO ENTER STORMWATER, WHICH INCLUDES STORAGE PRACTICES TO MINIMIZE EXPOSURE OF THE MATERIALS TO STORMWATER. THE SITE CONTRACTOR OR OPERATOR MUST DEVELOP, AND IMPLEMENT AS NECESSARY, APPROPRIATE SPILL PREVENTION, CONTAINMENT, AND RESPONSE PLANNING MEASURES.

NOTE: ANY SPILL OR RELEASE OF TOXIC OR HAZARDOUS SUBSTANCES MUST BE REPORTED TO THE DEPARTMENT. FOR OIL SPILLS, CALL 1-800-482-0777 WHICH IS AVAILABLE 24 HOURS A DAY. FOR SPILLS OF TOXIC OR HAZARDOUS MATERIAL, CALL 1-800-452-4664 WHICH IS AVAILABLE 24 HOURS A DAY. FOR MORE INFORMATION, VISIT THE DEPARTMENT'S WEBSITE AT: HTTP://WWW.MAINE.GOV/DEP/SPILLS/EMERGSPILLRESP/

2. GROUNDWATER PROTECTION: DURING CONSTRUCTION, LIQUID PETROLEUM PRODUCTS AND OTHER HAZARDOUS MATERIALS WITH THE POTENTIAL TO CONTAMINATE GROUNDWATER MAY NOT BE STORED OR HANDLED IN AREAS OF THE SITE DRAINING TO AN INFILTRATION AREA. AN "INFILTRATION AREA" IS ANY AREA OF THE SITE THAT BY DESIGN OR AS A RESULT OF SOILS, TOPOGRAPHY AND OTHER RELEVANT FACTORS ACCUMULATES RUNOFF THAT INFILTRATES INTO THE SOIL. DIKES, BERMS, SUMPS, AND OTHER FORMS OF SECONDARY CONTAINMENT THAT PREVENT DISCHARGE TO GROUNDWATER MAY BE USED TO ISOLATE PORTIONS OF THE SITE FOR THE PURPOSES OF STORAGE AND HANDLING OF THESE MATERIALS. ANY PROJECT PROPOSING INFILTRATION OF STORMWATER MUST PROVIDE ADEQUATE PRE-TREATMENT OF STORMWATER PRIOR TO DISCHARGE OF STORMWATER TO THE INFILTRATION AREA, OR PROVIDE FOR TREATMENT WITHIN THE INFILTRATION AREA, IN ORDER TO PREVENT THE ACCUMULATION OF FINES, REDUCTION IN INFILTRATION RATE, AND CONSEQUENT FLOODING AND DESTABILIZATION.

NOTE: LACK OF APPROPRIATE POLLUTANT REMOVAL BEST MANAGEMENT PRACTICES (BMPS) MAY RESULT IN VIOLATIONS OF THE GROUNDWATER QUALITY STANDARD ESTABLISHED BY 38 M.R.S.A. §465-C(1).

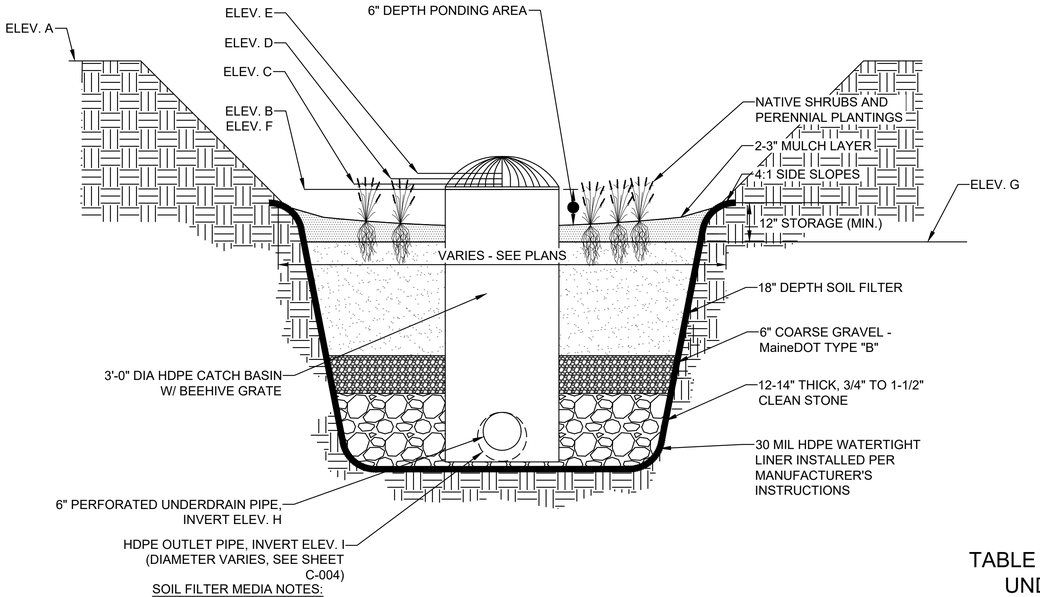
3. FUGITIVE SEDIMENT AND DUST: ACTIONS MUST BE TAKEN TO ENSURE THAT ACTIVITIES DO NOT RESULT IN NOTICEABLE EROSION OF SOILS OR FUGITIVE DUST EMISSIONS DURING OR AFTER CONSTRUCTION. OIL MAY NOT BE USED FOR DUST CONTROL, BUT OTHER WATER ADDITIVES MAY BE CONSIDERED AS NEEDED. A STABILIZED CONSTRUCTION ENTRANCE (SCE) SHOULD BE INCLUDED TO MINIMIZE TRACKING OF MUD AND SEDIMENT. IF OFF-SITE TRACKING OCCURS, PUBLIC ROADS SHOULD BE SWEPT IMMEDIATELY AND NO LESS THAN ONCE A WEEK AND PRIOR TO SIGNIFICANT STORM EVENTS. OPERATIONS DURING DRY MONTHS, THAT EXPERIENCE FUGITIVE DUST PROBLEMS, SHOULD WET DOWN UNPAVED ACCESS ROADS ONCE A WEEK OR MORE FREQUENTLY AS NEEDED WITH A WATER ADDITIVE TO SUPPRESS FUGITIVE SEDIMENT AND DUST.

NOTE: DEWATERING A STREAM WITHOUT A PERMIT FROM THE DEPARTMENT MAY VIOLATE STATE WATER QUALITY STANDARDS AND THE NATURAL RESOURCES PROTECTION ACT.

4. DEBRIS AND OTHER MATERIALS: MINIMIZE THE EXPOSURE OF CONSTRUCTION DEBRIS, BUILDING AND LANDSCAPING MATERIALS, TRASH, FERTILIZERS, PESTICIDES, HERBICIDES, DETERGENTS, SANITARY WASTE AND OTHER MATERIALS TO PRECIPITATION AND STORMWATER RUNOFF. THESE MATERIALS MUST BE PREVENTED FROM BECOMING A POLLUTANT SOURCE.

NOTE: TO PREVENT THESE MATERIALS FROM BECOMING A SOURCE OF POLLUTANTS, CONSTRUCTION AND POST-CONSTRUCTION ACTIVITIES RELATED TO A PROJECT MAY BE REQUIRED TO COMPLY WITH APPLICABLE PROVISION OF RULES RELATED TO SOLID, UNIVERSAL, AND HAZARDOUS WASTE, INCLUDING, BUT NOT LIMITED TO, THE MAINE SOLID WASTE AND HAZARDOUS WASTE MANAGEMENT RULES; MAINE HAZARDOUS WASTE MANAGEMENT RULES; MAINE OIL CONVEYANCE AND STORAGE RULES; AND MAINE PESTICIDE REQUIREMENTS.

5. EXCAVATION DEWATERING: EXCAVATION DEWATERING IS THE REMOVAL OF WATER FROM TRENCHES, FOUNDATIONS, COFFER DAMS, PONDS, AND OTHER AREAS WITHIN THE CONSTRUCTION AREA THAT RETAIN WATER AFTER EXCAVATION. IN MOST CASES THE COLLECTED WATER IS HEAVILY SILTED AND HINDERS CORRECT AND SAFE CONSTRUCTION PRACTICES. THE COLLECTED WATER REMOVED FROM THE PONDED AREA, EITHER THROUGH GRAVITY OR PUMPING, MUST BE SPREAD THROUGH NATURAL WOODED BUFFERS OR REMOVED TO AREAS THAT ARE SPECIFICALLY DESIGNED TO COLLECT THE MAXIMUM AMOUNT OF SEDIMENT POSSIBLE, LIKE A COFFERDAM SEDIMENTATION BASIN. AVOID ALLOWING THE WATER TO FLOW OVER DISTURBED AREAS OF THE SITE. EQUIVALENT MEASURES MAY BE TAKEN IF APPROVED BY THE DEPARTMENT.



NOTE: DEWATERING CONTROLS ARE DISCUSSED IN THE "MAINE EROSION AND SEDIMENT CONTROL BMPS, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION."

6. AUTHORIZED NON-STORMWATER DISCHARGES: IDENTIFY AND PREVENT CONTAMINATION BY NON-STORMWATER DISCHARGES. WHERE ALLOWED NON-STORMWATER DISCHARGES EXIST, THEY MUST BE IDENTIFIED AND STEPS SHOULD BE TAKEN TO ENSURE THE IMPLEMENTATION OF APPROPRIATE POLLUTION PREVENTION MEASURES FOR THE NON-STORMWATER COMPONENT(S) OF THE DISCHARGE. AUTHORIZED NON-STORMWATER DISCHARGES ARE:.
   - DISCHARGES FROM FIREFIGHTING ACTIVITY;
   - FIRE HYDRANT FLUSHINGS;
   - VEHICLE WASHWATER IF DETERGENTS ARE NOT USED AND WASHING IS LIMITED TO THE EXTERIOR OF VEHICLES (ENGINE, UNDERCARRIAGE, AND TRANSMISSION WASHING IS PROHIBITED);
   - DUST CONTROL RUNOFF IN ACCORDANCE WITH PERMIT CONDITIONS AND APPENDIX (C)(3);
   - ROUTINE EXTERNAL BUILDING WASHDOWN, NOT INCLUDING SURFACE PAINT REMOVAL, THAT DOES NOT INVOLVE DETERGENTS;
   - PAVEMENT WASHWATER (WHERE SPILLS/LEAKS OF TOXIC OR HAZARDOUS MATERIALS HAVE NOT OCCURRED, UNLESS ALL SPILLED MATERIAL HAD BEEN REMOVED) IF DETERGENTS ARE NOT USED;
   - UNCONTAMINATED AIR CONDITIONING OR COMPRESSOR CONDENSATE;
   - UNCONTAMINATED GROUNDWATER OR SPRING WATER;
   - FOUNDATION OR FOOTER DRAIN-WATER WHERE FLOWS ARE NOT CONTAMINATED;
   - UNCONTAMINATED EXCAVATION DEWATERING (SEE REQUIREMENTS IN APPENDIX C(5));
   - POTABLE WATER SOURCES INCLUDING WATERLINE FLUSHINGS; AND
   - LANDSCAPE IRRIGATION
7. UNAUTHORIZED NON-STORMWATER DISCHARGES: THE DEPARTMENT'S APPROVAL UNDER THIS CHAPTER DOES NOT AUTHORIZE A DISCHARGE THAT IS MIXED WITH A SOURCE OF NON-STORMWATER, OTHER THAN THOSE DISCHARGES IN COMPLIANCE WITH APPENDIX C (6). SPECIFICALLY, THE DEPARTMENT'S APPROVAL DOES NOT AUTHORIZE DISCHARGES OF THE FOLLOWING:
   - WASTEWATER FROM THE WASHOUT OR CLEANOUT OF CONCRETE, STUCCO, PAINT, FORM RELEASE OILS, CURING COMPOUNDS OR OTHER CONSTRUCTION MATERIALS;
   - FUELS, OILS OR OTHER POLLUTANTS USED IN VEHICLE AND EQUIPMENT OPERATION AND MAINTENANCE;
   - SOAPS, SOLVENTS, OR DETERGENTS USED IN VEHICLE AND EQUIPMENT WASHING; AND
   - TOXIC OR HAZARDOUS SUBSTANCES FROM A SPILL OR OTHER RELEASE.

ADDITIONAL REQUIREMENTS: ADDITIONAL REQUIREMENTS MAY BE APPLIED ON A SITE-SPECIFIC BASIS.

CONSTRUCTION OVERSITE

THE APPLICANT WILL RETAIN THE SERVICES OF A PROFESSIONAL ENGINEER TO INSPECT THE CONSTRUCTION AND STABILIZATION FOR ALL STORMWATER MANAGEMENT STRUCTURES. IF NECESSARY, THE INSPECTING ENGINEER WILL INTERPRET THE POND'S CONSTRUCTION PLAN FOR THE CONTRACTOR. ONCE

SOIL FILTER MEDIA NOTES:

SOIL FILTER MEDIA SHALL CONFORM TO MAINE DEP SOIL FILTER MEDIA OPTION 1, PER MAINE DEP STORMWATER BMP MANUAL CHAPTER 7.1. AS FOLLOWS:

1.1. SOIL FILTER MEDIA SHALL CONSIST OF A SILTY SAND SOIL OR SOIL MIXTURE COMBINED WITH A MATURE, MODERATELY FINE SHREDDED BARK OR WOOD FIBER MULCH.
1.2. THE RESULTING MIX SHALL CONTAIN NO LESS THAN 10% BY DRY WEIGHT ORGANIC MATERIAL.
1.3. THE RESULTING MIX SHALL CONTAIN 8% TO 12% PASSING THE NO. 200 SIEVE.
1.4. THE RESULTING MIX SHALL CONTAIN A MAXIMUM CLAY CONTENT OF 2%.

UNDERDRAIN OUTLET VALVE CALIBRATION NOTES:

AFTER THE COMPLETION OF INSTALLATION OF THE SOIL FILTER MEDIA, THE CONTRACTOR SHALL PERFORM THE FOLLOWING PROCEDURE TO CALIBRATE THE UNDERDRAIN OUTLET VALVE TO ACHIEVE THE 0.75"/HOUR DESIGN FLOW RATE.

1. BEGIN WITH VALVE HALF-OPEN.
2. CAREFULLY FLOOD THE BASIN UNTIL THERE IS 18" OF WATER STORED ABOVE THE SOIL FILTER MEDIA (UP TO THE HEIGHT OF OUTLET STRUCTURE RIM) WITHOUT CAUSING EROSION OF THE SOIL FILTER MEDIA.
3. RECORD THE TIME IT TAKES FOR THE 18" OF WATER TO DRAIN TO THE TOP OF THE SOIL FILTER MEDIA. THE TARGET DRAINDOWN TIME IS 24 HOURS.
4. IF THE 18" OF WATER DRAINS IN LESS THAN 24 HOURS, CLOSE THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
5. IF THE 18" OF WATER DRAINS IN MORE THAN 24 HOURS, OPEN THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
6. REPEAT THIS PROCESS UNTIL THE 18" OF WATER DRAINS IN 24 HOURS.

TABLE 1: MDOT SPECIFICATIONS FOR UNDERDRAINS (MDOT #703.22)

NOTES:
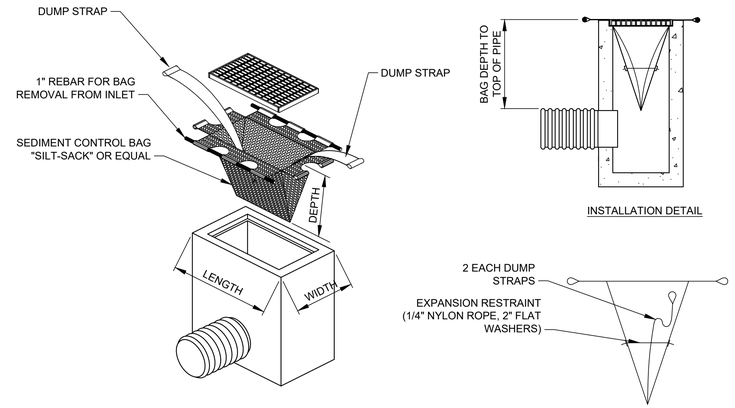
1. TEMPORARY SEDIMENT FENCE SHALL BE INSTALLED PRIOR TO ANY GRADING WORK IN THE AREA TO BE PROTECTED. THEY SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD AND REMOVED IN CONJUNCTION WITH THE FINAL GRADING AND SITE STABILIZATION.
2. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 592 GEOTEXTILE TABLE 1 OR 2, CLASS L WITH EQUIVALENT OPENING SIZE OF AT LEAST 30 FOR NONWOVEN AND 50 FOR WOVEN.
3. FENCE POSTS SHALL BE EITHER WOOD POST WITH A MINIMUM CROSS-SECTIONAL AREA OF 3 SQ. IN. OR A STANDARD STEEL POST.

5 SILT FENCE



NO SCALE

8 STABILIZED CONSTRUCTION ENTRANCE

NO SCALE

NOTES:
1. THE ENTRANCE/EXIT PAD SHOULD HAVE A LENGTH OF 50 FEET OR MORE AND A 12-FOOT MINIMUM WIDTH (OR AS APPROPRIATE TO CONTAIN THE WHEEL BASE OF CONSTRUCTION VEHICLES PLUS 3 FEET ON EITHER SIDE).
2. THE PAD SHOULD BE 6 INCHES OR MORE THICK WITH ANGULAR AGGREGATE (2-3 INCH DIAMETER). APPROPRIATE RECLAIMED CONCRETE MATERIAL MAY BE USED.
3. THE AGGREGATE SHOULD BE PLACED OVER A GEOTEXTILE FILTER TO PREVENT THE STONES FROM PUSHING INTO THE NATIVE SOIL.
4. AT THE BOTTOM OF SLOPES, A DIVERSION RIDGE SHOULD BE PROVIDED TO INTERCEPT RUNOFF.
5. BERMS MAY BE NECESSARY TO DIVERT WATER AROUND ANY EXPOSED SOIL, AND RUNOFF SHOULD BE DIRECTED TO A SEDIMENT TRAP.
6. THE WHEELS OF CONSTRUCTION EQUIPMENT MAY BE WASHED PRIOR TO EXITING THE SITE. WASHING SHOULD BE PERFORMED IN AN AREA THAT DRAINS TO A SEDIMENT TRAP OR BASIN.
7. THE PAD SHOULD BE INSPECTED WEEKLY, AND BEFORE AND AFTER EACH STORM. THE PAD MAY HAVE TO BE REPLACED IF THE VOIDS BECOME FILLED WITH SEDIMENT. STREET SWEEPING MAY BE NECESSARY

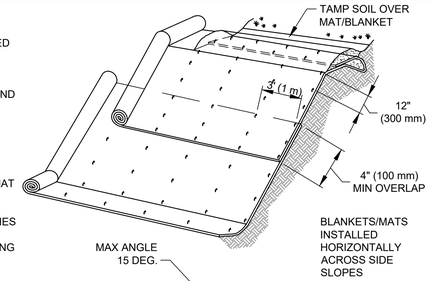
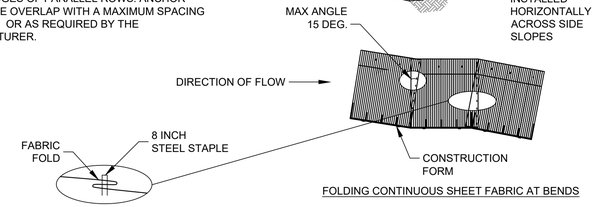
NOTES:
1. THE DIMENSION CHART ABOVE IS FOR STANDARD CATCH BASINS AND INLETS ONLY. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING THE CORRECT SIZE DEVICE FOR EACH INLET.
2. FOR NON-STANDARD CATCH BASINS AND INLETS, THE CONTRACTOR SHALL MEASURE DIMENSIONS IN THE FIELD AND ORDER THE APPROPRIATE SIZE(S).
3. THE INLET SEDIMENT CONTROL DEVICE SHALL BE OF HIGH FLOW DESIGN (200 GAL/MIN/FT), AS PER THE MANUFACTURER'S SPECS.
4. THE SEDIMENT CONTROL DEVICE SHALL BE INSPECTED DAILY BY THE CONTRACTOR AND MAINTAINED A MINIMUM ONCE PER MONTH OR WITHIN THE 48 HOURS FOLLOWING A STORM EVENT. FILTER SHALL BE CLEANED IN A MANNER WHICH ENSURES THAT ALL SEDIMENT REMAINS ON SITE.
5. SUBSTITUTION OF A SHEET OF FILTER FABRIC PLACED OVER THE OPENING OF THE INLET IS NOT APPROVED.
6. RECESSED CURB INLET CATCH BASINS MUST BE BLOCKED WHEN USING FILTER FABRIC INLET SACKS, SIZE OF FILTER INLET SACK TO BE DETERMINED BY MANUFACTURER.
7. THE FILTER SHALL BE REPLACED OR CLEANED WHEN THE BAG BECOMES HALF FULL.
8. SEE INLET PROTECTION NOTES STD. DETAIL E3.

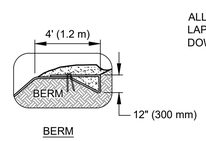
6 SILT SACK INLET PROTECTION

SCALE: N.T.S.

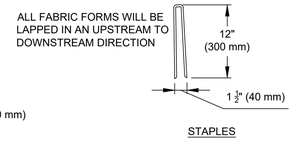




NOTES:
1. FLOATING TURBIDITY BARRIER CONSTRUCTION SHALL CONFORM WITH RELEVANT LOCAL AND STATE STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL.
2. FLOATING TURBIDITY BARRIER WILL BE INSPECTED AND MAINTAINED DAILY.

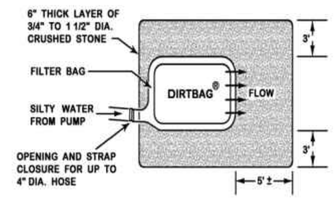


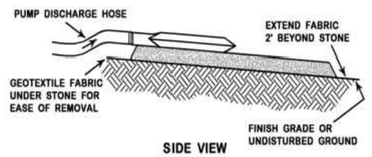
9 FLOATING TURBIDITY BARRIER



SCALE: N.T.S.

NOTES:
1. THE SOIL SURFACE SHOULD BE FINELY GRADED AND SMOOTH FOR THE BLANKET TO HAVE DIRECT CONTACT WITH THE SOIL AND TO PREVENT UNDERMINING. EROSION CONTROL BLANKETS PERFORM BEST ON LOAMY SOILS AND SHOULD NOT BE USED ON ROCKY SITES OR SHALLOW SOILS.
2. SEED SHOULD BE SOWN BEFORE INSTALLING THE EROSION CONTROL BLANKET.
3. ALWAYS UNROLL THE BLANKET DOWNHILL WITHOUT STRETCHING AND ANCHOR THE UPSLOPE EDGE IN A 12 INCH DEEP TRENCH THAT IS BACKFILLED AND TAMPED.
4. OVERLAP SHINGLE STYLE A MINIMUM OF 12 INCHES AT THE TOP OF EACH ROW AND 4 INCHES AT THE EDGES OF PARALLEL ROWS. ANCHOR ALONG THE OVERLAP WITH A MAXIMUM SPACING OF 3 FEET OR AS REQUIRED BY THE MANUFACTURER.





7 BIODEGRADABLE STABILIZATION MATTING

NO SCALE

NOTES:
1. INSTALL THE FILTER BAG PRIOR TO INITIATING ANY ACTIVITIES WHICH WILL REQUIRE DEWATERING.
2. THE TYPE OF FABRIC SHOULD BE BASED ON THE SIZE OF SOIL PARTICLES TO BE TRAPPED (I.E. A WOVEN MATERIAL FOR COARSE PARTICLES AND A NONWOVEN MATERIAL FOR FINER PARTICLES).
3. A FILTER BAG SHOULD BE LOCATED IN AN AREA MOSTLY LEVEL (WITH LESS THAN 5% SLOPE). A PAD OF CRUSHED GRAVEL MAY BE PROVIDED.
4. AVOID DISCHARGING TO AN AREA THAT IS BARE OF VEGETATION OR NEWLY VEGETATED. ANY SIGN OF EROSION OR CHANNELIZATION FROM THE DISCHARGED WATER REQUIRES IMMEDIATELY CORRECTION.
5. FILTER BAGS HAVE A FINITE CAPACITY FOR SEDIMENT COLLECTION AND MAY BE PRONE TO PLUGGING. AVOID OVER-PRESSURIZING THE BAG OR IT MAY BURST.

10 GEOTEXTILE FILTER BAG

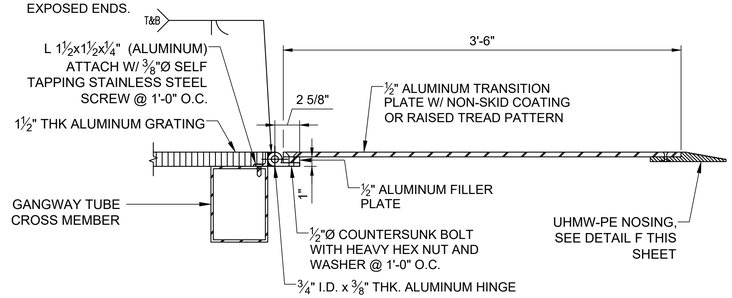
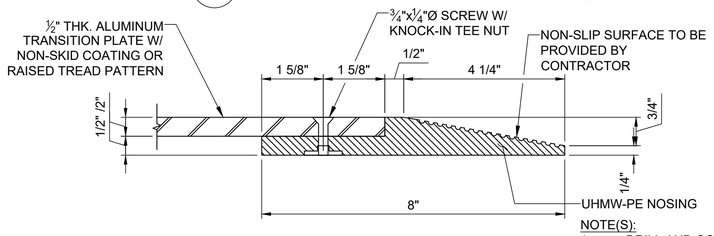
SCALE: 3/4" = 1'-0"



NOTE(S):
1. CONTRACTOR AND GANGWAY MANUFACTURER SHALL DETERMINE FINAL GANGWAY MEMBER SIZES AND SUBMIT TO ENGINEER FOR REVIEW AND APPROVAL.
2. ALUMINUM GRATING SHALL MEET ADA REQUIREMENTS.

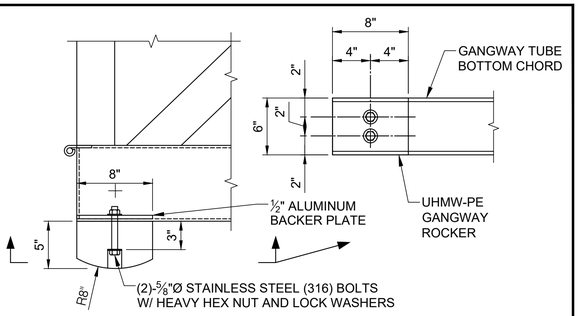
D TRANSITION PLATE DETAIL



SCALE: 3/4" = 1'-0"

NOTES:
1. CONTRACTOR SHALL DETERMINE FINAL GANGWAY MEMBER SIZES. MEMBERS ONLY SHOWN SCHEMATICALLY FOR REFERENCE.
2. CONTRACTOR SHALL SUBMIT FINAL GANGWAY SHOP DRAWINGS AND CALCULATION PACKAGE SIGNED AND SEALED BY A PROFESSIONAL ENGINEER LICENSED IN THE STATE OF MAINE.
3. ALL GANGWAY TUBE MEMBERS SHALL BE 6061-T6 ALUMINUM.
4. ALL GANGWAY TUBE MEMBERS SHALL BE CAPPED AND SEALED W/ ALUMINUM PLATES AT EXPOSED ENDS.

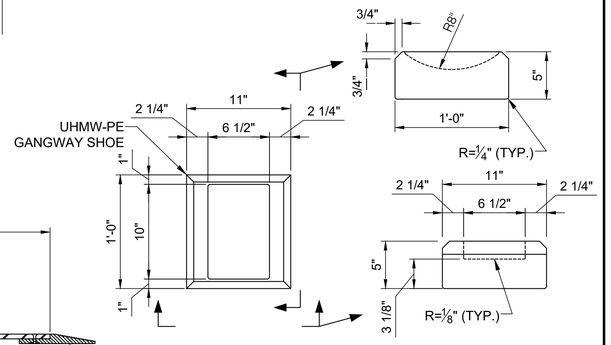
E GANGWAY TRANSITION PLATE SECTION



SCALE: 1-1/2" = 1'-0"

F UHMW-PE NOSING DETAIL

SCALE: 6" = 1'-0"



NOTE(S):
1. DRILL AND COUNTER BORE TRANSITION PLATES. COUNTERSINK HOLES FOR TEE NUTS TO TWICE BASE THICKNESS. SCREWS TO BE COUNTERSUNK INTO PLATE. INSTALL NEW SCREWS OVER SILICONE TO COVER EXPOSED ALUMINUM.
2. UHMW-PE NOSING DETAILS TO BE DETERMINED AFTER TRANSITION PLATE INSTALLATION AND SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS SET FORTH IN ADA.

G GANGWAY ROCKER DETAIL

SCALE: 1-1/2" = 1'-0"

NOTES:
1. ROCKER MATERIAL SHALL BE VIRGIN UHMW-PE, BLACK IN COLOR.
2. ALUMINUM BACKER PLATE PLAN DIMENSIONS SHALL MATCH ROCKER PLAN DIMENSIONS.

J GANGWAY SHOE DETAIL

SCALE: 1-1/2" = 1'-0"

NOTE: SHOE MATERIAL SHALL BE VIRGIN UHMW-PE, BLACK IN COLOR.

CITY OF BIDDEFORD - SITE PLAN & SUBDIVISION APPLICATION DRAWING CHECKLIST *LAST REVISED: 11/26/2024*

CHECKLIST DIRECTIONS:

1. The following checklist must be completely filled out by the applicant and included on all preliminary and final Site Plan & Subdivision submittals. No checklist is required for sketch submittals.
2. Applicant to confirm all of the items listed are included within the submittal. Any missing items must have adequate reasoning to justify their absence.
3. City to review applicant's submittal and checklist responses. Projects missing substantial submittal information with non-acceptable reasoning will be rejected and required to resubmit.
4. Items in **BLACK** are required for 'Preliminary' approval & 'Final' approval.
5. Items in **BLUE** are only required for 'Final' approval.

SUBMITTAL INFORMATION - TO BE FILLED OUT BY APPLICANT	
Project Name:	University of New England (UNE) Marine Science Center Research Pier
Planning Board # (if available):	2024.34
Applicant Name/Info:	University of New England
Submittal #/Type (Prelim/Final):	Preliminary
Submittal Date:	6/10/2025

SUBMITTAL REQUIREMENT		APPLICANT RESPONSE			CITY REVIEW RESPONSE	
ITEM NUMBER	DESCRIPTION	INFORMATION PROVIDED (YES/NO)	LIST DRAWING SHEET NUMBER WHERE INFORMATION IS PROVIDED	REASON NOT PROVIDED/COMMENT	ACCEPTABLE (YES/NO-REVISE & RESUBMIT)	COMMENT
1	**GENERAL PLAN REQUIREMENTS**	YES				
A	Drawing specific legends (linetypes, hatches, etc.)	YES	C-001, C-002			
B	Individual drawing layer control should be utilized: freeze/thawing, changing lineweights, and screening (i.e. screen existing layers on a proposed plan, freeze topography and underground utilities on a proposed site plan)	YES	ALL			
C	North arrows, standard engineering scale viewports, scale bars, dated revision blocks	YES	ALL			
D	All drawings and surveys must be in the following coordinate systems: NAD83 Maine State Plane West (Horizontal) and NAVD88 (Vertical)	YES	ALL			
E	Drawings need to be designed, signed & sealed by a Maine licensed professional engineer (PE); all boundary survey data needs to be performed by a licensed professional land surveyor (PLS)	YES	ALL			
2	**COVER SHEET**	YES				
A	Project Name & Property Address	YES	G-001			
B	Project Team Contact Information (Owner, Engineer, Contractor, etc.)	YES	G-001, G-002	Contractor contact info to be added at a later date		
C	Site Location Map	YES	G-001			
D	Sheet Set List of Drawings	YES	G-001			
E	Tax Map and Lot ID	YES	C-001			
F	Zoning & Shoreland Zone Information	YES	C-001			
G	Existing Use Description	YES	C-001			
H	Proposed Use Description	YES	C-003			
I	Required Waiver/Variances (Yes/No); if yes, plan must clearly list waivers/variances requesting	YES	G-001			
J	Name of Drainage Watershed	YES	C-001			
K	Within the MS4 Urbanized Area (Yes/No)	YES	C-001			
L	Natural resources (streams, wetlands, etc.) located on-site or adjacent to the property (Yes/No)	YES	C-001			
M	Within the 100-year Flood Zone (Yes/No)	YES	C-001			
N	Public Road Proposed (Yes/No)	NO	N/A	There are no public roads onsite.		
O	Private Road Proposed (Yes/No)	YES	C-001			
P	Public Sewer Connection (Yes/No)	YES	C-001	There are no proposed improvements to the public sewer		
Q	Public Storm Drain Connection (Yes/No)	NO	N/A	There are no public storm drains onsite.		
R	Limits of Disturbance in square feet and acres	YES	C-005			
S	Pervious Land Cover square footage, existing and proposed	YES	C-003			
T	Impervious Land Cover square footage (Pavement/Gravel), existing and proposed	YES	C-003			
U	Building Roof square footage, existing and proposed	YES	C-001			
V	Assigned Planning Board Number	YES	G-001			
W	Estimated cut/fill earthwork volumes. If disturbing within the Flood Zone, a separate set of earthwork volumes required (overall site vs. within flood zone)	YES	C-007, C-007			
3	**EXISTING CONDITIONS PLAN**					
A	Horizontal & Vertical Datums annotated (NAD83 & NAVD88)	YES	C-001			
B	Property & Right-of-Way Lines	YES	C-001			
C	Boundary line information (bearings, distances, etc.)	YES	C-001			
D	Property pin and monumentation locations	YES	C-001			
E	Existing easements with proper ownership identified	YES	C-001			
F	Road Names & Individual Lot Labels (Map, Lot, Owner, Acreage)	YES	C-001			
G	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.)	YES	C-001			
H	100-year Flood Zone Limits & Elevation	YES	C-001			
I	Existing contours with adequate contour labelling; minimum 1' contour interval	YES	C-001			
J	Existing building FFEs annotated	YES	C-001			
K	Spot elevations for all tie-in locations (curb cuts, property line)	YES	C-001			
L	Existing buildings & structures	YES	C-001			
M	Existing pavement areas & number of parking spaces	YES	C-001			
N	Existing ADA ramp geometry, detectable warning plates, and ADA parking spaces	YES	C-001			
O	Existing site features (sidewalks, retaining walls, curbing, lightpoles, guide rails, dumpsters, fencing)	YES	C-001			
P	Existing signage and striping	YES	C-001			
Q	Existing underground utility locations (storm, sewer, force main, water, gas, elec, tele)	YES	C-001			
R	Existing above-ground utility locations (manholes, catch basins, utility poles, hydrants, transformers, riprap)	YES	C-001			
S	Rim, invert in, invert out, pipe size, cardinal direction (N, E, S, W) information for any existing utility infrastructure being tied into (upstream/downstream/outfalls)	YES	C-001			
T	Existing tree lines, street trees, free-standing trees (12" or larger diameter at breast height), and vegetation	YES	C-001			
U	Location of any borings, drinking wells, and monitoring wells	YES	C-001			
4	**SITE DEMOLITION & EROSION CONTROL (E&SC) PLAN**					
A	Limits-of-disturbance outlined and acreage annotated	YES	C-005			
B	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.)	YES	C-001			
C	100-year Flood Zone Limits	YES	C-001			
D	Callout existing site features to be demolished/removed/replaced	YES	C-002			
E	Callout existing utilities to be demolished/removed/abandoned-in-place	YES	C-002			
F	Hatch existing buildings and pavement to be removed	YES	C-002			
G	Construction Entrance location(s)	YES	C-005			
H	Perimeter E&SC control location(s) (i.e. silt fence, erosion berm mix)	YES	C-005			
I	Stockpile and staging area(s) identified (with proper perimeter control)	YES	C-005			
J	Inlet protection location(s)	YES	C-005			
K	Note requiring contractor to implement dust control measures throughout construction	YES	C-012			
L	Note requiring contractor to pave utility trenches within right-of-way within 3 days of excavation or prior to any rain event	N/A	N/A	No utilties proposed within right-of-way		
M	If groundwater expected, show dewatering/silt bag location(s); show temporary pumping routing	YES	C-014			

N	If large development is proposed with an extensive underground stormwater conveyance network, identify how SWM infrastructure and BMPs will be protected during construction and if sediment traps/basins are needed	N/A		No extensive underground SWM infrastructure is proposed.		
5	**SITE PLAN/SUBDIVISION PLAN**	YES				
A	Partial Site Plans needed for any viewport scale greater than 1"=20'	YES	C-003			
B	Existing property and right-of-way lines	YES	C-003			
C	Proposed subdivision lot lines and labels	YES	C-003			
D	Required Zoning Setbacks shown with dimensions and annotation	YES	C-003			
E	Bulk requirement summary table (zoning/parking calculations)	YES	C-003			
F	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.)	YES	C-003			
G	100-year Flood Zone Limits	YES	C-003			
H	Proposed building outlines, door entrances and loading docks	YES	C-003			
I	Proposed building labels	YES	C-003			
J	Proposed road & sidewalk extents; provide clear annotation if roads will be public or private	YES	C-003			
K	Proposed parking and accessible parking locations; annotate parking space counts	YES	C-003			
L	Proposed signage, parking striping, and traffic striping	YES	C-003			
M	Detailed ADA ramp geometry, detectable warning surfaces, and ADA parking striping/signage; existing & proposed	NO		No ADA ramps or parking are proposed		
N	Proposed site features (i.e. curbing, walls, fencing, guiderail, fire hydrant, transformers, light pole locations)	YES	C-003, C-004, C-006, C-007			
O	Proposed landscaping; detailed landscaping design should be shown on separate plans	YES	C-015, C-016			
P	Designated snow storage areas	NO		No snow storage areas are proposed		
Q	Proposed dumpster locations and trash removal access	NO		No dumpsters or trash removal are proposed.		
R	Linear dimensions of all drive aisles, sidewalk widths, parking spaces, loading docks	YES	C-003, C-006, C-007			
S	Radial dimensions for all curbs, landscaped islands, sidewalks	YES	C-003			
T	Public/private road centerline stationing shown, labelled every 0+50' with curve data	YES	C-003, C-006, C-007			
U	If Private Road is proposed, final recorded plans must clearly note that proposed private roads will not be submitted in the future for public acceptance	NO		Will be provided at a later date		
V	If Private Road is proposed, final recorded plans must clearly note that the City is not responsible for any maintenance, repair, plowing, or trash removal of proposed private roads	NO		Will be provided at a later date		
W	Planning Board signature block for final recording	YES	G-001			
6	**GRADING PLAN**	YES				
A	Partial Grading Plans needed for any viewport greater than 1"=20'	YES	C-004, C-006, C-007			
B	Limits-of-disturbance outlined and acreage annotated	YES	C-004, C-006, C-007			
C	Proposed Building Labels with Individual Finished Floor Elevations (FFEs)	YES	C-004, C-006, C-007			
D	Existing contours with adequate contour labelling, screened; minimum 1' contour interval	YES	C-004, C-006, C-007			
E	Proposed contours with adequate contour labelling; minimum 1' contour interval	YES	C-004, C-006, C-007			
F	Detailed grading for all ditches, swales, outfalls, and riprap	YES	C-004, C-006, C-007			
G	All proposed contours tie-into existing contours at limits-of-disturbance outline	YES	C-004, C-006, C-007			
H	Existing spot elevations for all asphalt, curb, and SWM BMP tie-in locations	YES	C-004, C-006, C-007			
I	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.)	YES	C-004, C-006, C-007			
J	100-year Flood Zone Limits	YES	C-004, C-006, C-007			
K	Proposed spot elevations for all important roadway geometric points (including but not limited to: parking/drive aisles, building corners/entrances, retaining walls, loading docks, EOP/curblines)	YES	C-004, C-006, C-007			
L	Proposed spot elevations for all ADA ramp/landing/parking stall geometry points	N/A	No new ADA proposed			
M	Proposed % slope arrows for all ADA parking spaces and sidewalks	N/A	No new parking proposed			
N	Proposed longitudinal % slope arrows for drainage ditch centerlines	YES	C-004, C-006, C-007			
O	Proposed % slope arrows for roads, parking areas, and landscape tie-in areas	YES	C-004, C-006, C-007			
P	Estimated cut/fill earthwork volumes. If disturbing within the Flood Zone, a separate set of earthwork volumes required (overall site vs. within flood zone)	YES	C-004, C-006, C-007			
7	**ROAD PROFILES (if public/private road proposed)**	YES				
A	Existing surface; dashed and screened	YES	C-006, C-007			
B	Proposed surface; continuous and bold	YES	C-006, C-007			
C	Road design speed must be clearly identified	YES	C-006, C-007			
D	Corresponding centerline stationing and curve data annotation	YES	C-006, C-007			
E	All vertical curves must identify the proposed 'K' values and confirm they meet the minimum design speed thresholds listed in AASHTO's Green Book Tables 3-35 & 3-37	YES	C-006, C-007			
F	Clear annotation if proposed road will be public or private	YES	C-006, C-007			
G	If Private Road is proposed, plans must clearly note that proposed private roads will not be submitted in the future for public acceptance	YES	C-003			
H	If Private Road is proposed, plans must clearly note that the City is not responsible for any maintenance, repair, plowing, or trash removal of proposed private roads	YES	C-003			
8	**UTILITY PLAN**					
A	Existing underground utility locations; screened (storm, sewer, force main, water, gas, electric, telecom)	YES	C-004			
B	Existing above-ground utility locations; screened (manholes, catch basins, utility poles, hydrants, riprap)	YES	C-004			
C	Rim, invert in, invert out, pipe size, cardinal direction (N, E, S, W) information for any existing utility infrastructure being tied into (upstream/downstream/outfalls)	YES	C-004			
D	Proposed underground utility locations; bold (storm, sewer, force main, water, gas, electric, telecom, lighting)	YES	C-004, ES1.1			
E	Proposed above-ground utility locations; bold (manholes, catch basins, utility poles, hydrants, transformers, riprap)	YES	C-004			
F	Proposed storm culverts, outfalls, and riprap locations and sizes	YES	C-004 to C-007			
G	Storm/sewer structure labels must include: rim, inverts in, inverts out, pipe sizes, cardinal directions (N, E, S, W)	YES	C-004 to C-007			
H	Storm/sewer pipe labels must include: linear footage, pipe size, material, slope	YES	C-004 to C-007	Additional information can be found in the SWM Report		
I	Flow directional arrows for storm & sewer pipes	YES	C-004 to C-007			
J	Proposed & existing site features shown that could conflict with proposed utilities (trees, signs, lightpoles, bollards, foundations, guiderails)	YES	C-004 to C-007			
K	All storm drains must be sized to convey the 25-year storm	YES	C-004 to C-007	See SWM Report		
L	Sewer force main sizes and invert elevations	NO	N/A	No force main proposed		
M	Sewer pump station locations, model, rim, inverts, pipe sizes, cardinal directions (N,E,S,W); additional details and hydraulic calculations required for any Public pump station proposed.	NO	N/A	No pump stations proposed		
N	Locations, sizes, and elevations of any: grease traps, oil-water separators, septic systems, drinking wells	NO	N/A	None proposed		
O	Proposed water sizes labelled	NO	N/A	None Proposed		
9	**UTILITY PROFILES**					

A	Utility profiles required for **all** gravity storm drain and sewer pipes proposed: within the right-of-way, within private or public roads, for non-driveway culverts, and for any public infrastructure tie-ins	NO	N/A	No utilties proposed in ROW		
B	Existing surface; dashed and screened	NO	N/A	No utilties proposed in ROW		
C	Proposed surface; continuous and bold	NO	N/A	No utilties proposed in ROW		
D	Storm/sewer structure labels must include: rim, inverts in, inverts out, pipe sizes, cardinal directions (N, E, S, W)	NO	N/A	No utilties proposed in ROW		
E	Storm/sewer pipe labels must include: linear footage, pipe size, material, slope	NO	N/A	No utilties proposed in ROW		
F	Existing and proposed gravity pipe crossings shown; sizes labelled and depths/clearance annotated	NO	N/A	No pipe crossing proposed		
G	Existing and proposed electric/water/telecom/gas crossings shown at approximate depths; sizes labelled and depths/clearance annotated	YES	ES1.1			
10	**DETAILS**					
A	Road section detail, including pavement/gravel depths & cross slopes	YES	C-008, C-009, C-010			
B	Sidewalk, paver, crosswalk, and any other pavement section details	N/A	None proposed			
C	Pavement sawcut & shiplap details	YES	C-003, C-006, C-007			
D	Utility trench/backfill detail	YES	C-011			
E	All site feature details; curbing, retaining walls, fencing, guiderails, dumpsters, etc.	YES	C-011, C-013, C-014			
F	Signage, striping, and ADA details	N/A	N/A	No signage or striping proposed		
G	E&S notes and details	YES	C-012, C-013, C-014			
H	Utility structure details (manholes, cleanouts, fittings, handholes, transformer pads, hydrants)	YES	C-013, C-014			
I	Storm outfall & riprap details	YES	C-011			
J	Drainage ditch cross section identifying minimum depth, minimum bed width, and maximum side slopes	NO	C-013, C-014			
K	Pump station, grease trap, oil-water separator, septic, drinking well details	N/A	N/A	None Proposed		
L	Conduit section details	N/A	N/A	None Proposed		
11	**LANDSCAPING, LIGHTING & PHOTOMETRIC PLANS**					
A	As required by ordinance; at a minimum: locations, counts, lighting models, and landscaping species must be identified	YES	C-015, C-016, ES1.1			
B	Landscaping & lighting details	YES	C-015, C-016, ES1.1			
12	**DOCUMENTS/REPORTS/CALCULATIONS**					
A	On initial preliminary submittal applications, applicant must submit a development review and inspection fee. Applicant to coordinate fee amount with City Planner prior to submittal. This fee will be drawn against to cover the following type of services throughout the project life cycle (and may require replenishing): i. 3rd Party City Peer-Review ii. Site Inspections during the permitting process iii. Erosion & Sediment Control Inspections during construction iv. Right-of-Way Inspections during construction v. Site Punchlist/As-Built Inspections post-construction	Yes				
B	Stormwater Management Report, including: 1. Predevelopment & Post-development Drainage Area Maps, including: a. Subdrainage areas delineated and labeled b. Points of Interest/Analysis shown and labeled c. Hatching for different land cover areas (impervious, pervious, gravel) within each applicable USDA soil boundary d. Time of concentration (Tc) paths & durations e. Four City-standardized stormwater summary tables 2. If any SWM water quality BMP or detention facility is proposed, hydrologic model exports/hydrographs must be submitted for the for the 2, 10, 25, & 100-year storm frequencies 3. Sizing calculations for any SWM water quality BMP or detention facility 4. A stormwater maintenance manual for any proposed SWM water quality BMP or detention facility, including: a. Annual maintenance requirements b. Annual inspection requirements by a licensed PE; noting that all inspection reports/logs need to be submitted to the Engineering Department by March 1st each following year, identifying what on-going maintenance has occurred and what remedial repairs are needed c. Signed Property Owner Agreement: including the current property owner's contact information and signature; it must be noted that all stormwater BMP maintenance requirements are linked to the property for perpetuity and transfer to any new ownership	Yes				
C	An approved 'Sewer Ability-to-Serve Letter' from the Engineering Department: i. Applicant to submit proposed sewer flow calculations per Maine's Subsurface Wastewater Disposal Rules, Chapter 241, Section 4 (Tables 4A & 4C)	N/A		No new buildings/sewer conveyance proposed		
D	A Performance Guarantee Cost Estimate utilizing Planning's template	YES				
E	For any Site Location of Development (SLODA) project, the applicant's submittal must mimic a formal submittal to DEP. Submit must abide to DEP's SLODA application and include DEP's SLODA Submittal Checklist (Form D)	YES				
F	25-year hydraulic calculations for all storm conveyance infrastructure (pipes, culverts, drainage ditches); starting tailwater conditions/documentation must be clearly identified	YES				
K	Public sewer pump station sizing calculations and maintenance plan	N/A	No pump stations proposed	No pump stations proposed		
M	Grease trap sizing calculations	N/A	No grease traps proposed	No grease traps proposed		
N	Homeowner Association (HOA) agreement for any private road serving two (2) lots or more	N/A	No HOA	No HOA		
O	Summary list & copy of any required DOT/DEP/USACE permits & approvals	YES				

CITY OF BIDDEFORD, MAINE

SHORELAND AND SITE PLAN REVIEW APPLICATION

Project:
RESEARCH PIER

Applicant:

UNIVERSITY OF NEW ENGLAND
11 HILLS BEACH ROAD
BIDDEFORD, MAINE 04005

June 9, 2025

Prepared by:

RE: University of New England
Proposed Research Pier

Dear David and Planning Board Members:

University of New England is pleased to submit the enclosed application for site plan review and shoreland permits for a proposed research pier and floats at 11 Hills Beach Road in Biddeford. Enclosed are 10 copies of the site plan, and the following information submitted electronically per the direction from your office:

- Letter responding to May 13, 2025 staff comments – Attachment A
- Letter responding to Planning Board Member Comments - Attachment B
- City Application
- Letter of Agent Authorization
- Site Plan Drawing Checklist
- Location Map
- Deed
- Letter of Financial Capacity
- Stormwater Management Report
- Alternatives Analysis and Memo
- ACOE, DEP, and SRCC Permits
- Letter from the Maine Historic Preservation Commission clearing the project
- Notice to Proceed with external reviews from the city
- Typical shed photo
- Light fixture cuts
- Drawing Set

We understand the application fee has been paid in full.

The project is located in the city Institutional (IN) zone and the Limited Residential District shoreland zone. The project was included on the most recent version of the city approved campus master plan.

The Biddeford Campus of the University of New England (UNE), Maine's largest private university, is positioned on the confluence of the Saco River and the Atlantic Ocean. This location, along with state-of-the-art research facilities and world-class faculty, has recently earned UNE's marine programs rankings among the top 10 nationally from *Biology Explorer*, *College Choice*, and *College Magazine*. To expand UNE's unique

experiential learning and research opportunities in the marine ecosphere, the University is proposing the construction of a permanent pier which will serve as a four-season research deployment facility directly adjacent to the Arthur P. Girard Marine Science Center (GMSC) on its Biddeford campus

UNE's School of Marine and Environmental Programs, housed in the GMSC, is the academic home of 325 undergraduate and graduate students who are studying marine science, marine policy and management, as well as a wide variety of interdisciplinary fields, including marine ecosystems, conservation, restoration, business, sustainable fisheries and ecological aquaculture, social-ecological systems, and marine sustainability science. Additionally, two programs provide pathways from undergraduate to graduate degrees in Marine Sciences and Maritime Law (a 3+3 partnership with Maine Law).

Three things distinguish UNE's marine programs. The first is the oceanfront location on its core undergraduate campus, which provides direct access to the Gulf of Maine. The second is the multitude of research opportunities available to students starting as early as their first year of undergraduate studies. And the third is how the marine research done by UNE students and faculty directly impacts the people of Maine and beyond.

However, all three of these key assets are limited by the lack of year-round access to the ocean. ***The planned pier will allow students and faculty to be on the water throughout the year, thereby greatly enhancing UNE's groundbreaking research into critical problems facing Maine.***

The jewel of UNE's marine programs is Ram Island, UNE's private one-acre living laboratory two miles from campus in Saco Bay, which was gifted to the University in 2014. The island, which houses a fieldwork station and an experimental kelp farm, provides unparalleled research and field study opportunities for students and faculty. It also creates the potential to develop research partnerships that focus on critical issues facing Maine, making Ram Island home to coastal zone investigations of climate change, marine geology, invasive species, marine mammal ecology and interactions with fisheries and marine aquaculture.

Despite its prime location with direct access to the ocean, UNE currently has floating docks that are removed seasonally, precluding access to Ram Island and other areas of the Gulf of Maine in the critical winter and spring months. Construction of a permanent pier at UNE's Girard Marine Science Center will allow for dynamic, year-round, ocean-going research activities, facilitating scientific and practical exchanges with local, regional, and national marine researchers and industry partners. Additionally, the deep-water access would expand UNE's ability to serve as a collaboration hub for coastal marine and deep-water science and industry. As good stewards of the environment and our coastal neighbors, UNE is committed to ensuring that the planned structure fully adheres to local, state, and federal regulations.

Investment in UNE's marine programs is good for Maine taxpayers. With the Gulf of Maine warming faster than almost any other body of water on the planet, marine research

afforded by year-round access to the water will allow UNE to gather critical data to guide Maine's response to climate change. These expanded research opportunities will likewise enhance UNE's ability to ensure that its students graduate with the curiosity and experience to both ask and answer the important questions that will inform to the data-driven decisions impacting the expanding fields of aquaculture, fisheries, marine law and policy, marine business and entrepreneurship, ocean food systems, and related fields.

In order to determine the optimum location for the pier, an extensive alternatives analysis and studies were undertaken. This was not only for due diligence, but was required by the state and federal regulators. The regulators concluded that this exhaustive analysis was satisfactory to establish the proposed pier location. A copy of the alternatives analysis is included as Attachment 8.

The proposed facility includes the following:

1. A pile supported pier structure extending from shore into the Saco River. The proposed pier includes an approximately 130-foot long approach section extending from shore and an 80-foot long pier head section oriented roughly parallel to the direction of flow in the river. The pier consists of a concrete superstructure on steel pipe piles, with timber fender piles for vessel berthing and floating docks, and a pile supported gangway lifting beam to allow the gangway ramp to be temporarily removed from the water.
2. A floating dock system consisting of one 8-foot by 24-foot float, one 8-foot by 26-foot 10-inch float, and one 12-foot by 30-foot gangway landing float to provide all-tide vessel access for UNE's vessels on the west side of the pier, and a single 6-foot by 20-foot floating dock to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.
3. An 80-foot by 5-foot gangway to provide ADA compliant access to the float system.
4. An upland access road connecting the existing road at the MSC to the proposed pier, including associated site grading, drainage, and stormwater management features.

The proposed activities are described in detail in the following sections.

Pier Structure

The proposed vehicle rated pier is supported by twenty-five concrete filled steel pipe piles and a concrete abutment which connects the pier to the proposed access road. All of the piles are located beyond the Highest Annual Tide (HAT) line, while the abutment is located shoreward of the HAT line. Fourteen, 24-inch diameter steel piles support the pier head portion of the structure and eleven, 16-inch diameter steel piles support the pier approach. The seven piles at the first three pile bents at the pier approach will be socketed to ledge due to a limited soil layer above the ledge surface at these locations. The remaining piles will be driven to ledge but do not require socketing given the sufficient

depth of overburden soils. The piles support precast concrete pile caps which support precast concrete deck planks that form the pier deck surface.

The pier includes thirty, 12-inch diameter timber fender piles to provide for vessel berthing at the main face of the pier and to restrain the floating dock system. All new fender piles will be untreated timber, greenheart species. A gangway lifting beam is proposed to lift the gangway out of the water during float maintenance or in advance of severe weather. The lifting beam is supported by a steel column anchored to the pier on one side and a 10.75-inch diameter concrete filled steel pipe pile on the other.

Floating Dock System

The proposed floating dock system includes four floating docks. The three timber floats on the west side of the pier are new, while the single float on the east side of the pier is an existing float that will be relocated from UNE's facility that is located upstream of the proposed pier (note that this facility is proposed to be demolished). The new floats consist of an 8-foot by 24-foot float, an 8-foot by 26-foot 10-inch angled float, and a 12-foot by 30-foot gangway landing float. All new floats will be located on the west side of the pier approach at the south side of the pier head. The existing float is 6-feet by 20-feet and will be located on the east side of the pier approach at the south side of the pier head to provide a tie-up location for the City of Biddeford Fire Boat. The new floats are accessed by the proposed gangway or a fixed ladder, and the fireboat float is accessed solely by a fixed ladder. All the floating docks are located beyond the MLLW line and will be restrained and guided by the timber fender piles. The floats will allow vessels to tie up to the pier at any time during the tide cycle. The depths of water at the floats are adequate to meet UNE's needs.

Gangway

The 80-foot by 5-foot gangway provides ADA compliant access to the new floating dock system on the west side of the pier. The gangway connects to the pier near the beginning of the pier approach and lands on the 12-foot by 30-foot floating dock. The total indirect impact from the gangway is 357 square feet (this area excludes the portion of the gangway located above the floating dock).

Pier Building

One pier building, an 8 ft x 10 ft shed, is proposed to be located at the southeast corner of the pier head. This structure will provide storage for small equipment used by MSC staff, as well as an indoor protected location to house certain utility features such as electrical service panels.

Access Drive

Vehicular and pedestrian access to the pier will be provided by a new 20 ft wide access road that will extend from the existing GMSC access road and parking area, around the east side of the GMSC building, and to the end of the pier approach. A turnaround area is

provided adjacent to the pier approach to allow for vehicles up to and including fire trucks accessing the pier to turn around and drive forward to exit the access road. There is no parking proposed adjacent to the pier. All vehicles will use the existing parking spaces adjacent to the GMSC building. The new road will provide construction access for the project, which will help to limit the amount of work performed from the water and allow more staging to be achieved from land. The upland work will include stormwater management features that have been designed to meet Maine DEP Chapter 500 standards.

The following addresses Site Plan Approval/ Site Design Criteria and Shoreland Zoning Land Use standards for piers.

Site Plan Approval/Site Design Criteria

1. **Drainage**

   A Stormwater Management Report is attached. The report submitted demonstrates compliance with Maine Department of Environmental Protection (DEP) Basic and General standards. The project will include bioretention filters designed to DEP BMP standards for enhancement of stormwater runoff quality.

   A waiver of Article XI.II.Section 5.B.1. is required for an increase in the rate of runoff. This waiver has historically been granted by the planning board for projects located on the UNE parcel that are directly tributary to tidal receiving waters, which will be the case for this project. There will be no impact on the capacity of a receiving downgradient storm system. The bioretention filters will provide stormwater quality enhancement and cooling of runoff, as well as a level of stormwater detention. Level spreaders will be utilized to evenly distribute runoff from the bioretention filters into sheet flow. Although an increase in the rate of runoff is shown at two point locations on the drainage plans, the reality is that the stormwater runoff from the subcatchments is distributed over a wide area. Note that the peer review engineer supports this waiver.

2. **Utilities**

   Power will be fed underground to the pier from the Girard Marine Science Center.

3. **Parking**

   There will be no formal dedicated parking associated with the project.

4. **Structural Layout and Design**

a) Design of Buildings

An 8 ft x 10 ft shed is proposed on the pier. A photo in attachment 12 shows a rendering of the shed; a wood frame structure, with weather resistant siding, and a metal roof.

b) Setbacks

The research pier is sited in conformance with all setback requirements.

c) Fire Protection & Safety

Based on input from the fire department, the road width was increased to 20 ft per NFPA standards. The turnaround meets the city required dimensional standards and has been modelled to accommodate fire apparatus.

d) Landscaping

The revegetation plan has been developed to meet the City of Biddeford's Shoreland Zoning requirements as well as to preserve a visual buffer for the access drive to minimize visibility from the water to the greatest extent possible, while achieving the required clearing and considering functional requirements such as snow plowing at the turnaround. The revegetation plan also meets requirements of the Saco River Corridor Commission (SRCC) who has issued a permit for the project.

Revegetation Plan

The revegetation plan, drawing C-15, is intended to meet the city of Biddeford's shoreland zoning requirements. Details are as follows:

- 49 trees are being removed with 21 of those within the 50-foot HAT setback
- Approximately 5,850 SF of understory duff later and low growth vegetation (predominantly non-native invasive honeysuckle) is being disturbed within 50 feet of the HAT.
- 5 tree species are proposed in approximate equal quantities with the evergreen trees located between the road shoulder grading and the top of embankment where they are anticipated to fit under the remaining mature forest canopy, and between existing trees and ledge. Field verification during construction will be required to ensure final plant locations are feasible if shallow ledge or significant remaining tree root stock is present.
- 3 shrubs (2 evergreen and 1 deciduous) are proposed to plant at the toe of the road embankment as well as in areas around the turnaround where fitting larger trees will be challenging given limited space and the need to maintain an area for plowed snow.
- Deciduous trees are spread throughout the area.

- The bioretention cells will be filled with a mix of wet, drought and salt tolerant shrubs and perennials which are shown on the plan as a hatched area. The notes on the plan and drawing C-16 plant schedule describe the random pattern mixing of these plants throughout the bio retention cells.
- All other disturbed areas will be planted with a native roadside mix of perennial grasses and flowers. It is recommended that this area be mowed once a year in the fall to maintain the mix of plants. If mowed more often, it will revert to mostly lawn grasses.
- Mature plant sizes are listed on the plant list to give a sense of the amount of screening that may occur over time.

e) Service, Storage, and Utility Areas

Not applicable

f) Paving, Parking, and Storage Areas

No paving, parking, or storage is located within the side or rear setback of the property, nor within the front setback of the property.

g) Handicapped Accessibility

The pier is designed to meet ADA requirements.

h) Loading Facilities

Not applicable.

i) Parking, Loading, and Protective Buffers

The non-vegetated area of the land being developed will be less than 75% and a minimum of 25% of the land area being developed either remains in its natural state or consists of landscape and lawn areas.

j) Open Space

Not applicable.

k) External Lighting

An electrical site plan is included in the drawing set which shows the site lighting. Full cut off fixtures will be utilized and lighting will be the minimum necessary for safety and functionality.

l) Signs

Not applicable.

m) Historic and Archeological Resources.

See attachment 10 for a letter from the Maine Historic Preservation Commission clearing the project.

Shoreland Zoning Land Use Standards

The project will comply with the applicable standards of Article XIV. Section 15.C.

- Access from shore will be developed on soils appropriate for the use. A detailed erosion control plan has been prepared for the project.
- The location does not interfere with existing beach areas.
- The facility has been located to minimize adverse effects on fisheries. The plan was reviewed be the National Marine Fisheries Service.
- The facility size is the minimum necessary to carry out current and future research activities, and is consistent with the surrounding character and uses of the area, including the Camp Ellis pier on the opposite side of the river.
- An 8 ft x 10 ft shed for storage of life jackets, tools, research equipment is proposed on the pier, and is an operational necessity. The shed will not exceed 20 ft in height.

Waivers:

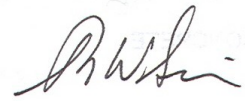
Four waivers are requested:

- Article XI. II. Section 5.B.1.a. – The rate of post development runoff shall not exceed that of pre-development. As noted in the cover letter for the previous submission, this waiver has historically been granted by the planning board for projects located on the UNE parcel that are directly tributary to tidal receiving waters, which will be the case for this project. There will be no impact on the capacity of a receiving downgradient storm system. The bioretention filters will provide stormwater quality enhancement and cooling of runoff, as well as a level of stormwater detention. Level spreaders will be utilized to evenly distribute runoff from the bioretention filters into sheet flow. Although an increase in the rate of runoff is shown at two point locations on the drainage plans, the reality is that the stormwater runoff from the subcatchments is distributed over a wide area.

  Note that the peer review engineer has indicated support for this waiver.

- Article XI.II. Section 5.B.1.e.3. - No slope shall be created which results in a slope of more than two feet horizontal to one foot vertical unless proper retaining walls are proposed. The design includes slopes which exceed this standard in ledge (1/4H:1V) and along the drive (1H:1V). This waiver has been requested by UNE and granted by the planning board for all projects proposed by UNE on the campus due to the presence of ledge and the desire to

minimize impacts of construction on adjacent areas. Based on our experience the ledge in the area is stable at steeper slopes. Turf reinforcement matting specifically designed to stabilize steeper slopes will be utilized along the drive sideslopes.



- Article VI. Section 26.F. - No cut or fill slopes that exceed 3 horizontal to 1 vertical. See above for justification.

- Article XIV. Section 15.H.4. Road and driveway banks shall be no steeper than a slope of two horizontal to one vertical, and shall be graded and stabilized in accordance with the provisions for erosion and sedimentation control contained in Section 15T. See above for justification for steeper slopes. The erosion control specified for the project exceeds the standards of Section 15T.

We are in hopes the planning board will find that the proposal is consistent with city regulations and approval standards. We look forward to meeting with the planning board on June 18.

If you have any questions or comments, please contact me.

Sincerely,
Site Design Associates

Tom Saucier, P.E.
President

RE: University of New England
Proposed Research Pier

Dear David and Planning Board Members:

On behalf of University of New England (UNE), Site Design Associates (SDA) is pleased to submit this response to staff and peer review comments dated May 13, 2025. The comments are included below in italics, with our responses.

A. Staff Review Comments

Comment: *The Preliminary Application shall include copies of the required notification letters provided to the various Native American Tribes listed above in Section 3*

Response: **The letters to the tribes, the plan included with the letters, the certified mail receipts, and the two responses received are attached at the end of this letter. This information was included in the DEP NRPA, ACOE and Harbor Master applications previously submitted to the city. In all cases the information was deemed complete and the DEP and ACOE permits issued.**

Note that the plan that was included with the letters reflected the pier in the currently proposed location. The purpose of the request for tribal review is to give them the opportunity to review the location of proposed projects to verify whether the proposed development would affect known properties of religious and/or cultural significance. It is not intended to seek approval of any design.

Comment: *Limited information was provided by the Applicant on the checklist. Applicant should fully complete the checklist for the next submission, including column D (list drawing sheet number where information is provided) and* column E (reason not provided/comment).

23 Whitney Way – Topsham, Maine 04086
Phone: (207) 449-4275 email: info@sitedesignassociates.biz

Response:

An updated copy of the checklist is provided with this submission.

Comment:

Section 74-35 Construction of Wharf, Pier, or Landing Regulated states that new piers require permission from the Harbormaster

Response:

Refer to the attached letter addressing the Planning Board Members comments.

Comment:

Section 74-36 Floats requires permission from the Harbormaster for floats that are an integral part of a pier.

Response:

Section 74-36 is not applicable to this project. Section 74-36 addresses floats that are *not* an integral part of a pier.

Comment:

The application lists two (2) project waivers being sought. The application didn't include a narrative or rational for Staff or the Board to evaluate the requested waivers. This information shall be included in the Preliminary application package.

Response:

Four waivers are requested:

- **Article XI. II. Section 5.B.1.a. – The rate of post development runoff shall not exceed that of pre-development. As noted in the cover letter for the previous submission, this waiver has historically been granted by the planning board for projects located on the UNE parcel that are directly tributary to tidal receiving waters, which will be the case for this project. There will be no impact on the capacity of a receiving downgradient storm system. The bioretention filters will provide stormwater quality enhancement and cooling of runoff, as well as a level of stormwater detention. Level spreaders will be utilized to evenly distribute runoff from the bioretention filters into sheet flow. Although an increase in the rate of runoff is shown at two point locations on the drainage plans, the reality is that the stormwater runoff from the subcatchments is distributed over a wide area.**

  Note that the peer review engineer has indicated support for this waiver.

- **Article XI.II. Section 5.B.1.e.3. - No slope shall be created which**

results in a slope of more than two feet horizontal to one foot vertical unless proper retaining walls are proposed. The design includes slopes which exceed this standard in ledge (1/4H:1V) and along the drive (1H:1V). This waiver has been requested by UNE and granted by the planning board for all projects proposed by UNE on the campus due to the presence of ledge and the desire to minimize impacts of construction on adjacent areas. Based on our experience the ledge in the area is stable at steeper slopes. Turf reinforcement matting and geosynthetic reinforcement specifically designed to stabilize steeper slopes will be utilized along the drive sideslopes.

- **Article VI. Section 26.F. - No cut or fill slopes that exceed 3 horizontal to 1 vertical. See above for justification.**

- **Article XIV. Section 15.H.4. Road and driveway banks shall be no steeper than a slope of two horizontal to one vertical, and shall be graded and stabilized in accordance with the provisions for erosion and sedimentation control contained in Section 15T. See above for justification for steeper slopes. The erosion control specified for the project exceeds the standards of Section 15T.**

B. Peer Review Comments

Comment:

The Fire Department has expressed that the length of the turnaround does not meet their needs of a 70- foot-long turnaround at the end of the access road. The provided turnaround is approximately 40 feet long.

Response:

We analyzed the turning movements of the aerial apparatus and the results were provided to E. Dexter, Ass. Chief BFD for review. The results demonstrate there is adequate space for the aerial apparatus to maneuver. Additionally, we have adjusted the location of the security gate on the pier to provide additional space for turning maneuvers. We have enclosed an updated Vehicle Circulation Exhibit to convey the safe turn around of an emergency vehicle, at the end of this letter.

E. Dexter has indicated the design could be approved with a condition of approval that both Truck 32 and SH-34 are able to maneuver the turnaround post construction, and prior to final sign off they should be taken to the location for testing.

Mandating a turnaround larger than that shown would result in more clearing of trees and more impervious surface in the shoreland zone adjacent to the river, neither of which would be looked at favorably by the regulators if an alternative exists. The regulators had asked whether a narrower drive could be provided and we indicated that NFPA rules require 20 ft of width.

Comment:

Access road width has been increased to 20 feet, as requested by the Fire Department.

Response:

Acknowledged.

Comment:

Additional coordination items for the City are indicated within the Review Comments below in red font.

Response:

Acknowledged.

Comment:

Section 74-35 Construction of Wharf, Pier, or Landing Regulated states that new piers require permission from the Harbormaster.

Response:

Refer to response above.

Comment:

Section 74-36 Floats requires permission from the Harbormaster for floats that are an integral part of a pier.

Response:

Refer to response above.

Comment:

What erosion and sedimentation controls will be utilized for the construction of the pier abutment and pier? A turbidity curtain detail is included and assumed to be used for the pier but the location of this is not shown in plan view.

Response:

Turbidity from the project is anticipated to be limited and temporal associated with the installation of piles for the pier. Neither the State or Federal permits require the use of a turbidity curtain. The turbidity curtain detail has been removed from the plans. Areas of upland soil disturbance will utilize erosion

control BMP's as identified in the Erosion Control Notes and Details on sheets C-012, C-013, and C-014.

Comment:

A stabilized construction entrance, silt fence, biodegradable stabilization matting, and plunge pool are proposed for the construction of the proposed access road.

Response:

Acknowledged.

Comment:

A revegetation plan has been submitted showing tree, shrub, and perennial plantings within the shoreland zone and upland areas. The plan has been reviewed and approved by the Saco River Corridor Commission.

Response:

Acknowledged.

Comment:

The Inspection and Maintenance Plan of Stormwater Management Facilities includes a recertification requirement, which includes a five-year recertification to Maine DEP. This reference should be removed, since there is no DEP Stormwater Permit.

Response:

We have removed the language regarding the recertification to Maine DEP from the Inspection and Maintenance Plan.

Comment:

See Land Development Regulations, Article XI Site Plan Review, comments 1-5 below. A waiver of Section 61.A.12 will also be required.

Response:

We are unclear regarding the referenced section, since there is no section 61 in Article XI. If the intent was to reference Article VI, section 61.A.1-2 we do not believe a waiver is required. All new construction and development, is designed to reflect or resemble, as nearly as possible, natural runoff conditions in terms of volume, velocity and location of runoff. As noted previously, the rate of runoff after development will slightly exceed predevelopment runoff conditions, and the impact was evaluated in terms of potential soil erosion and sedimentation, drainage capacity, and the land use/land cover characteristics. The impact was determined to be minimal; therefore, a waiver of Article XI.

II. Section 5.B.1.a. was requested, which is supported by the peer review engineer.

Comment:

Subsection A states that any project involving parcels of land of greater than five acres, or any portion of a larger parcel greater than five acres, shall be required to conduct a wildlife study by a certified wildlife biologist. This provision may be waived, if a letter from the Maine Department of Inland Fisheries and Wildlife (MDIFW) indicates there are no significant habitat areas involved in the project area or abutting adjacent land. The Maine DEP Natural Resource Protection Act (NRPA) permit states that "according to the Department s Geologic Information System (GIS) database there are no mapped Essential or Significant Wildlife Habitats at the site. The Maine Department of Inland Fisheries and Wildlife (MDIFW) reviewed the proposed project and stated that the project is located adjacent to but outside of Tidal Waterfowl and Wading Bird Habitat (TWWH), a designated significant wildlife habitat. MDIFW stated that minimal impacts to piping plover and Blanding's turtle habitat are anticipated and provided general recommendations including minimizing vegetation removal and soil disturbance, and that time spent in the water should be minimized to the greatest extent practicable." Given the supporting information in the NRPA permit, we believe this requirement is met.

Response:

Acknowledged.

Comment:

The applicant has requested a waiver of Article XI.II Section 5.B.1 to allow a small increase in peak stormwater runoff rates. The applicant has stated they are requesting this waiver since stormwater discharges directly to a tidal receiving water and there will be no impact on a downgradient storm system. Since there's only a small increase in peak runoff rate and Chapter 500 does allow for a waiver of this requirement for sites discharging to coastal wetlands/rivers, we recommend granting this waiver.

Response:

Acknowledged.

Comment:

Bioretention systems are proposed to provide stormwater treatment. 76% of the new impervious area and 72% of the new developed area are treated, which meets the Maine DEP General Standard water quality treatment requirements for linear developments.

Response:

Acknowledged.

Comment:

The Grading and Drainage Plan and HydroCAD model refers to the stormwater treatment practices as Bioretention Filter Cells; however, the details for stormwater practices refer to them as Grassed Underdrained Soil Filters. All notations should be updated to be consistent between plan, details, and model.

Response:

We have revised the plans, details, and hydrology model for consistency. Moving forward, these BMPs will be referred to as Bioretention Filter Cells.

Comment:

A detail should be included in the plans for the 3' diameter catch basin with beehive grate.

Response:

We have revised the plans to include the details mentioned above. The Bioretention Filter Cell detail has been revised to call out an ADS Nyloplast Drain Basin (See Sheet C-103) and the ADS Nyloplast 18" Drain Basin W/Beehive Grate Detail can be found on Sheet C-014.

Comment:

The 3' diameter catch basins are modeled with 18" horizontal orifices (beehive grates). The Grassed Underdrained Soil Filter detail and Granding and Drainage Plan show the beehive grate as the entire catch basin diameter. Please clarify what size the grate is and update the plans and model as needed.

Response:

See response above.

Comment:

The applicant has requested a waiver of Article XI.II Section 5.B.1.e.3 to allow for slopes steeper than 2:1 because of ledge. 1:1 vegetated reinforced slopes are proposed where there is no ledge and 1:10 max slopes are proposed where there is ledge.

Has the ledge cut been reviewed by a geotechnical engineer for stability?

Additional information about the vegetated reinforced slopes is

needed. A 1:1 slope is steep and difficult to vegetate, even with matting. The slope detail on C-013 shows horizontal lines into the slope that are not labeled. Are these additional stabilization measures?

Article XIV, 15.H.4 also prohibits road and driveway banks to be steeper than 2:1, and a waiver would be needed based on the proposed slopes.

Response:

The proposed ledge cuts reflect the same conditions used along the existing access road to the Marine Science Center which has been in place and stable for over 20 years. Conditions will be reviewed in the field by a geotechnical engineer and any loose material will be removed to result in a stable finished slope which may be between 1:1 and 1:10 depending on the conditions encountered.

The slope protection has been specified as a turf reinforcement mat, suitable for stabilization of the slopes shown. Additionally, geosynthetic reinforcement will be incorporated into the reinforced slope to provide stability. Details will be incorporated into the final construction plans for the project.

A waiver of article XIV. Section 15.H.4. has been requested. See previous discussion.

Comment:

North arrow provided on C-006 is incorrect and should be reoriented.

Response:

We have revised the north arrow on Sheet C-006 to properly show the orientation of the drawing.

Comment:

Proposed spot grades along access road do not match proposed contours or vertical profile. For example, see Sta. 4+00. All proposed elevations should correlate between plan view, profile view, cross sections.

Response:

We have revised the plans, profiles, and cross-sections to properly correlate between the sheets.

Comment:

Typical Section provided on sheet C-008 shows the 1:1 embankment starting behind the proposed guardrail. However, Plan View (C-006/007) shows the 1:1 embankment starting in front of the guardrail. The typical section and

plan view should correlate. Additionally, an adequate guardrail "shelf" should be provided behind the guardrail posts for support.

Response:

Plans have been revised such that the guardrail is within the shelf that is above the 1:1 reinforced slope.

Comment:

Vertical curve data is only partially shown in the access road profile (C-006/007). Adjust viewports so all data is legible.

Response:

Plan sheets have been corrected to show all vertical curve data.

Comment:

Proposed pipes missing from access road profile (C-006/007) and storm drain callouts/leader lines pointing to incorrect location. Clarify where storm drain pipes are in profile.

Response:

We have revised the viewports in Sheets C-006 and C-007 to properly show storm drain pipes in the access road profiles.

Comment:

Article XIV, 15.H.1 requires roads and driveways within the shoreland zone to be set back at least 100 feet, horizontal distance, from the normal high-water line of a great pond classified GPA or a river that flows to a great pond classified GPA, and 75 feet, horizontal distance, from the normal high-water line of other water bodies, tributary steams, or the upland edge of a wetland unless no reasonable alternative exists as determined by the Planning Board. However, Section 15.H.1 does not apply to roads or driveways that provide access permitted structures and facilities located nearer to the shoreline due to operational necessity. Since the pier is a permanent structure with operational necessity to the shoreline and the access road is providing access to the pier, we believe the proposed access road is allowed by the Ordinance.

Response:

Acknowledged.

Comment:

The pier is proposed in the Institutional (IN) zone and Limited Residential (LR) shoreland zoning overlay district. An 8'x10' shed is also proposed on the pier to store life jackets, tools, and research equipment and is stated to be an operational necessity. Although the Shoreland Zoning Ordinance does not allow structures within 75' of the normal high-water line in the Limited Residential overlay district, the setbacks do not apply to structures that are

an operational necessity for direct water access. Based on the information provided, we believe the proposed structure is allowed by the Ordinance.

Response:

Acknowledged.

Comment:

The cover letter for the application indicates the plan was reviewed by the National Marine Fisheries Service. Have review comments from the National Marine Fisheries Service been provided to the City?

Response:

The Army Corps of Engineers requests comments and input from NMFS as a component of their review. The comments we received were verbal during a Teams meeting with NMFS and the ACOE on February 5, 2025. The meeting was held to discuss whether construction activity and/or the project would be likely to affect Atlantic Sturgeon, and how to best go about making that determination. The final determination made as a result of that meeting was that the project was not likely to adversely affect Atlantic Sturgeon, and the ACOE permit was issued.

Comment:

A submerged lands lease or easement is required for structures, such as piers, located on publicly-owned submerged lands. Has a submerged lands lease or easement been secured for the project through the Maine Department of Agriculture, Conservation & Forestry, Bureau of Parks and Lands.

Response:

We will be requesting that the planning board condition any approval on receiving a submerged lands lease from the Submerged Lands Program.

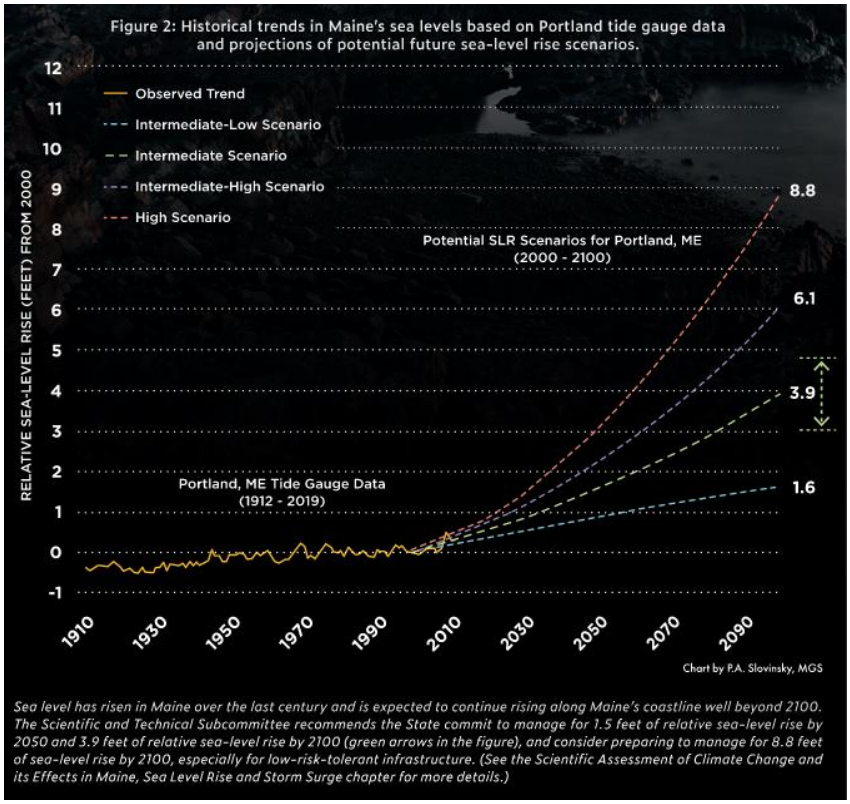
Comment:

Applicant should provide comments about how the pier and shed comply with Article XII Floodplain Management Ordinance requirements and specifically Section R, Coastal Floodplains. Please be sure to include how pier, shed, and utility elevation were selected and if sea level rise was considered.

Response:

It is not clear to us that the Floodplain Management Ordinance is applicable to the pier and floats. From the code: The City of Biddeford has chosen to become a participating community in the National Flood Insurance Program and agreed to comply with the

requirements of the National Flood Insurance Act of 1968, through the establishment of its Floodplain Management Ordinance. The National Flood Insurance Act of 1968, which established the National Flood Insurance Program (NFIP), primarily focuses on insuring improved real property or mobile homes located within designated Special Flood Hazard Areas (SFHA). Essentially, the program covers structures that are walled and roofed, principally above ground, and affixed to a permanent site. This includes residential, industrial, commercial, and agricultural buildings. Piers and floats, specifically those used for "boat-related purposes", are generally not covered under the NFIP standard flood insurance policy.



In regards to compliance with section R, Coastal Floodplains:

- **The bottom of all electrical work and permanent fixtures and components, will be elevated to at least one foot above the base flood elevation.**
- **The bottom of the shed will be 4 feet above the base flood elevation.**
- **The project was designed by a professional engineer.**

Regarding sea level rise, GEI conducted a flood risk analysis to assess the potential exposure of the pier to floodwaters in current conditions and under various scenarios of Sea Level Rise that may potentially occur throughout the structure life. For the analysis, GEI utilized the scenarios put forth by the Maine Climate Council (MCC) in their 2020 report "Maine Won't Wait: A Four-Year Plan for Climate Action." The MCC recommends consideration of sea level rise based on two separate scenarios:

- **Commit to Manage Scenario – This reflects the "intermediate" sea level rise curve from the 2017 NOAA model, with a relative sea level rise of 3.9 feet in 2100 (relative to 2000 mean sea level)**
- **Prepare to Manage – This reflects the "high" sea level rise curve from the 2017 NOAA model, with a relative sea level rise of 8.8 feet in 2100 (relative to 2000 mean sea level)**

Sea level rise curves published in the referenced MCC report are shown below for reference:

GEI uses these scenarios to project future water elevations throughout the tidal range and in flood/storm events, throughout the design life of the structure, and compares those elevations to the proposed elevations of various assets to assess the level of risk from exposure to floodwaters.

The design life for the pier is assumed to be approximately 75 years, so the end of life would be approximately 2100. GEI has designed the structure for uplift and lateral loading assuming water elevations associated with the storm surge and wave action during 100-year recurrence interval coastal storm events under the Commit to Manage scenario. This reflects an appropriate design condition that reasonably balances structure risk throughout the design life, project functionality, adjacent site impacts, and project cost. The pier is designed to accommodate conditions through the end of life under the Commit to Manage scenario (3.9 feet of SLR).

Comment:

The cover letter for the application indicates the plan was reviewed by the National Marine Fisheries Service. Have review comments from the National Marine Fisheries Service been provided to the City?

Response:

The Army Corps of Engineers requests comments and input from NMFS as a component of their review. The comments we received were verbal during a Teams meeting with NMFS and the ACOE on February 5, 2025. The meeting was held to discuss whether construction activity and/or the project would be likely to affect Atlantic Sturgeon, and how to best go about making that determination. The final determination made as a result of that meeting was that the project was not likely to adversely affect Atlantic Sturgeon, and ACOE issued their permit.

Comment:

Article XIV, 15.H.1 requires roads and driveways within the shoreland zone to be set back at least 100 feet, horizontal distance, from the normal high-water line of a great pond classified GPA or a river that flows to a great pond classified GPA, and 75 feet, horizontal distance, from the normal high-water line of other water bodies, tributary steams, or the upland edge of a wetland unless no reasonable alternative exists as determined by the Planning Board. However, Section 15.H.1 does not apply to roads or driveways that provide access to permitted structures and facilities located nearer to the shoreline due to operational necessity. Since the pier is a permanent structure with operational necessity to the shoreline and the access road is providing access to the pier, we believe the proposed access road is allowed by the Ordinance.

Response:

Acknowledged.

Comment:

The pier is proposed in the Institutional (IN) zone and Limited Residential (LR) shoreland zoning overlay district. An 8'x10' shed is also proposed on the pier to store life jackets, tools, and research equipment and is stated to
be an operational necessity. Although the Shoreland Zoning Ordinance does not allow structures within 75' of the normal high-water line in the Limited Residential overlay district, the setbacks do not apply to structures that are an operational necessity for direct water access. Based on the information provided, we believe the proposed structure is allowed by the Ordinance.

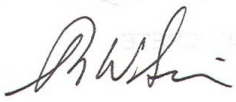
Response:

Acknowledged.

Comment:

A submerged lands lease or easement is required for structures, such as piers, located on publicly-owned submerged lands. Has a submerged lands lease or easement been secured for the project through the Maine Department of Agriculture, Conservation & Forestry, Bureau of Parks and Lands?

Response:



We will be requesting that the planning board condition any approval on receiving a submerged lands lease from the Submerged Lands Program.

In closing, we note that based on the city staff report dated May 13, 2025 staff found the application satisfies the City's Shoreland Zoning Ordinance and Site Plan criteria.

We believe that City Staff and Planning Board will also find that the project conforms to the UNE Institutional Zone Master Plan submission, with regards to the project location, design, and applicable standards. We believe we have satisfactorily addressed staff comments. If you have any additional questions or comments, or require additional information, please do not hesitate to contact Alan Thibeault, (602-2253) or me (449-4275).

We look forward to meeting with the Planning Board on June 18 to further discuss this project.

Sincerely,
Site Design Associates

Tom Saucier, P.E.

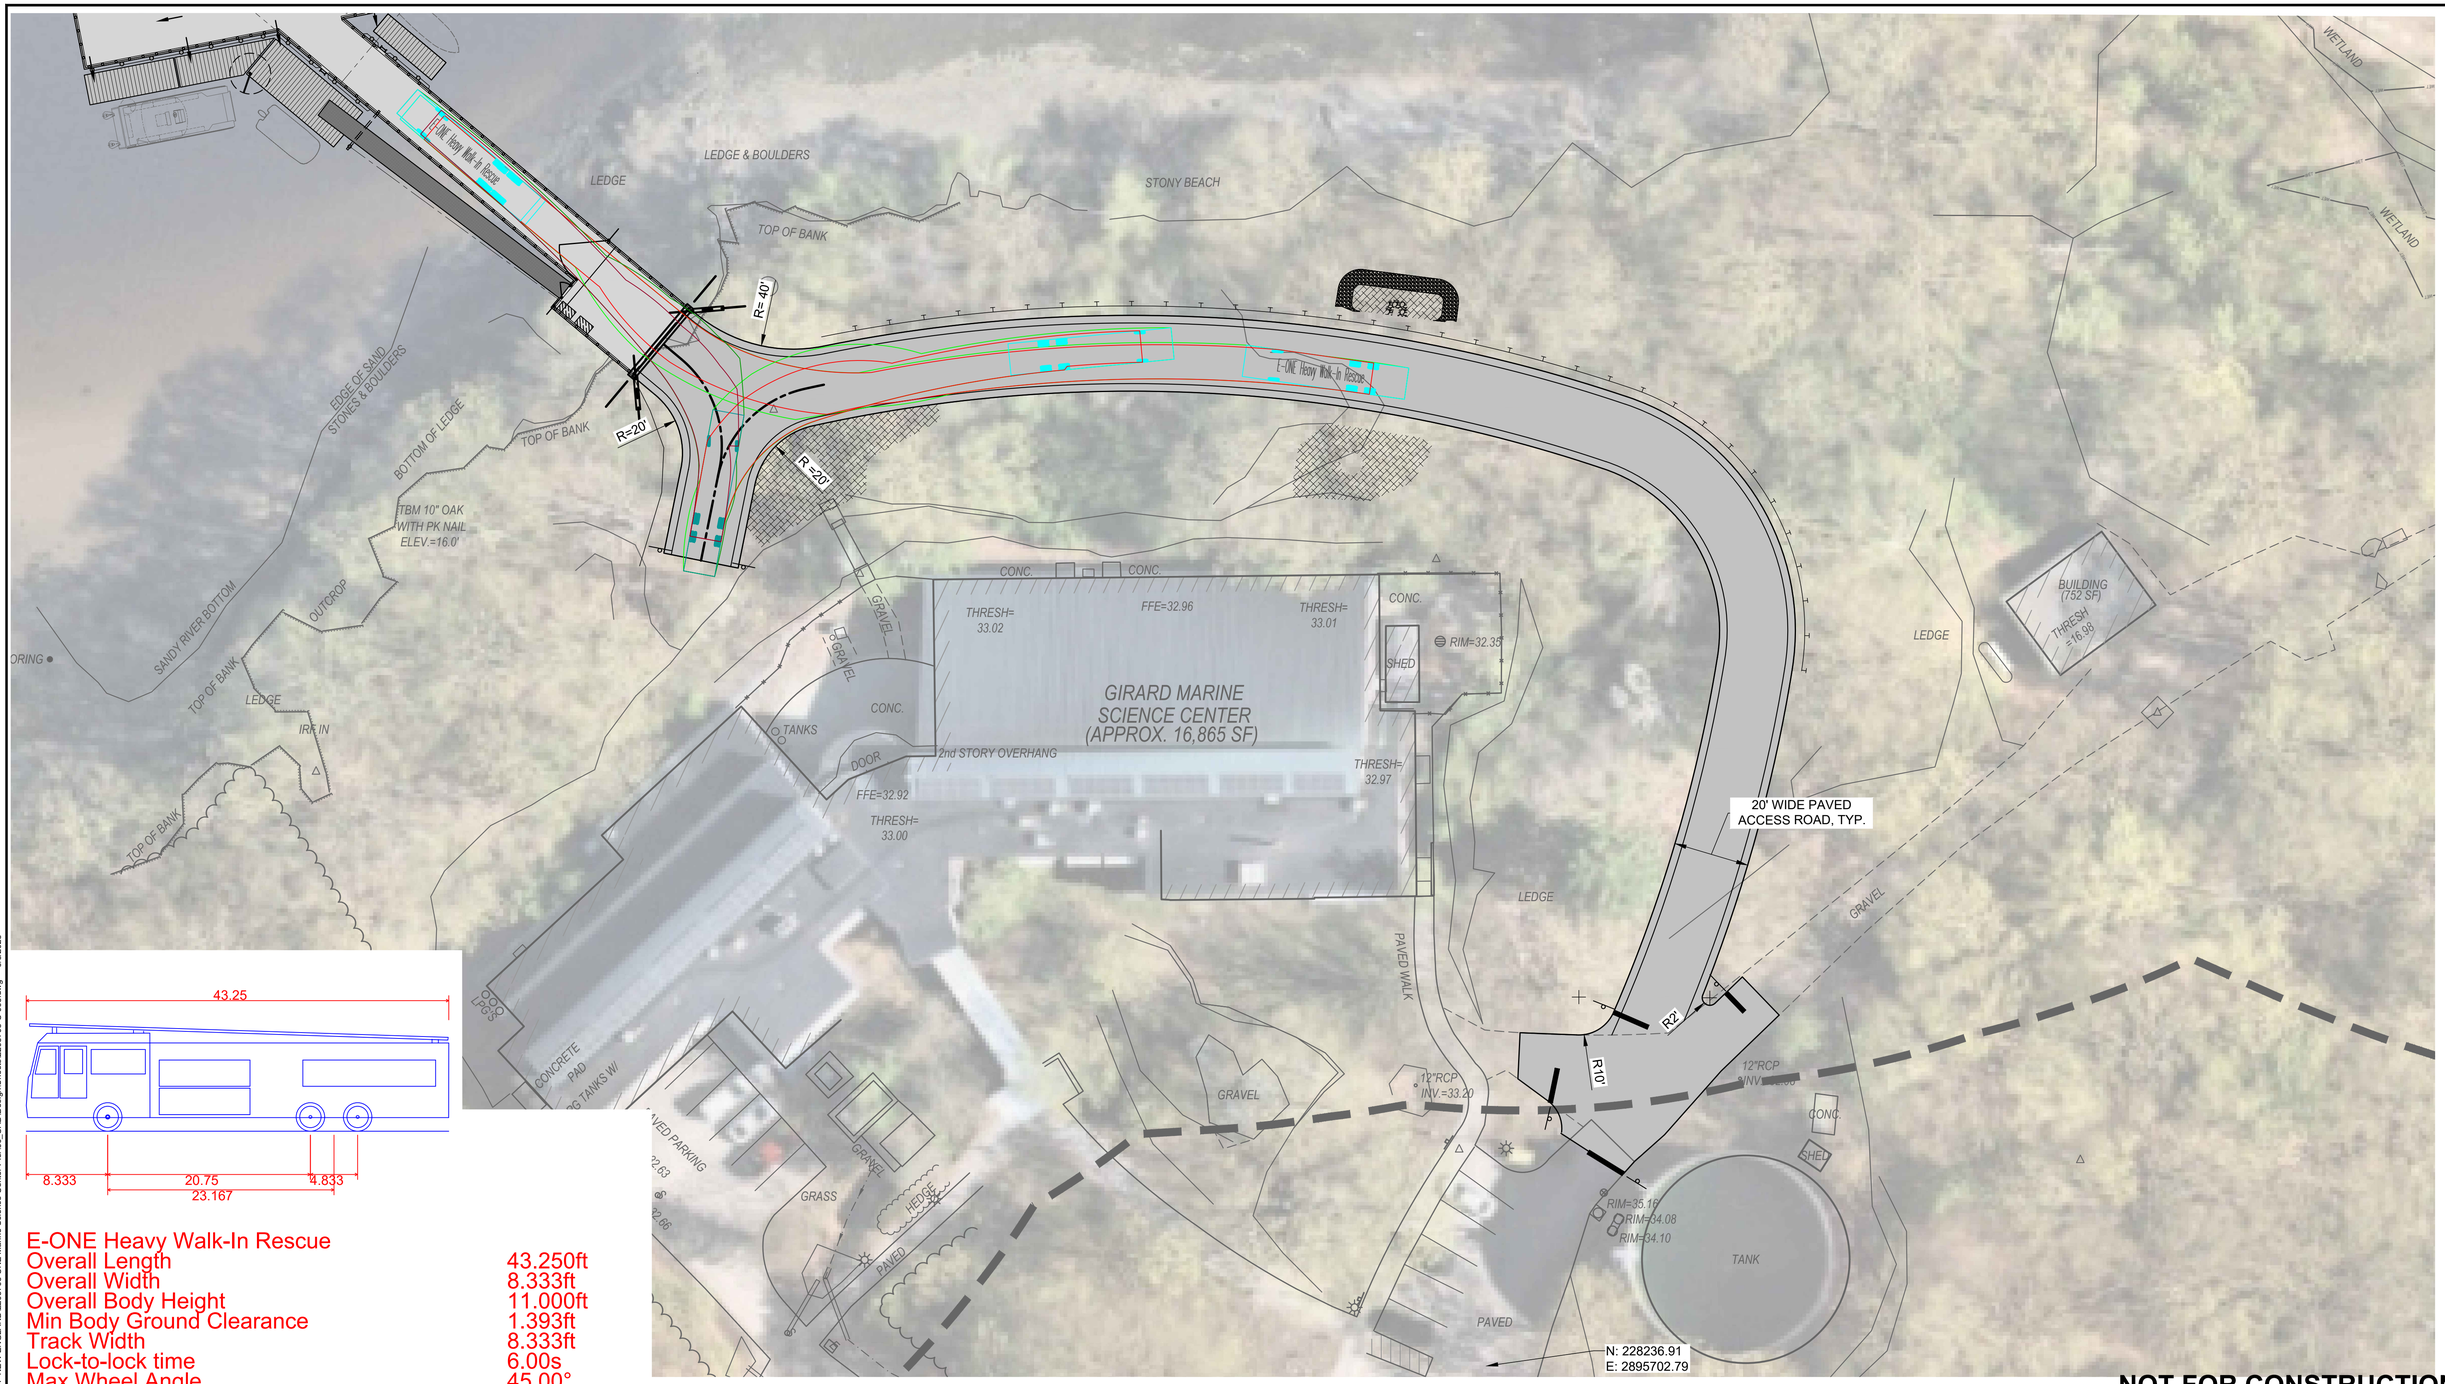
Re: Biddeford – 11 Hills Beach Rd



Dear Tom;

The Passamaquoddy THPO has reviewed the following applications regarding the historic properties and significant religious and cultural properties in accordance with NHPA, NEPA, AIRFA, NAGPRA, ARPA, Executive Order 13007 Indian Sacred Sites, Executive Order 13175 Consultation and Coordination with Indian Tribal Governments, and Executive Order 12898 Environmental Justice.

The Pier Project listed above will not have any impact on cultural and historical concerns of the Passamaquoddy Tribe but is concerned about the road work, will there be archeological work . Should buried artifacts, human remains, cultural sites or ground features be unexpectedly unearthed during ground disturbing activities, all construction should immediately cease and the resources be examined by a professional archaeologist. Additionally, all appropriate authorities- including all pertinent tribal entities should be notified.

Sincerely;

Donald Soctomah

RE: University of New England
Proposed Research Pier

Dear David and Planning Board Members:

In response to the questions and deliberations of the Planning Board after the presentation and public comments, UNE is pleased to submit the following:

After all of the discussion at the last meeting, is was clear that there was confusion on what city ordinances and regulations are applicable to this project and the pending Site Plan review.

Review Criteria
Toward the end of the May 21, 2025 Planning Board meeting and then in writing after the meeting, the City Solicitor, Harry Center, stated that the Planning Board process was governed by the City's Ordinances relating to Site Plan review and Shoreland Zoning Ordinance standards. The Site Plan criteria are found in Article XI.II Section 5.B of the City Ordinance while the Shoreland Zoning standards are found in Article XIV Section 15(c).

On May 27, 2025, Attorney Center wrote to the Planning Board reiterating what criteria the Planning Board's decision was governed by. He wrote, in part: "At this time, I see no basis for the City's Planning Board to deny this permit based upon the water depth at the location, the current, or any of the accusations made at the last meeting- as there are no standards within the City's Code of Ordinances/Shoreland Zoning Ordinance that would justify or support the denial of a pier based on such claims by the opponents." See attached, *EXT: UNE Research Pier*, at the end of this letter.

Prior to the May 21 meeting, Planning Office staff issued its report, *Planning Board Staff Report,* dated May 13, 2025, in regards to this project, in which it indicated that the Site Plan and Shoreland Zoning Review criteria applied to UNE's application for site plan approval. From a Zoning perspective, this project should be reviewed against the Institutional Zone and Shoreland Zone standards. This project was included on the

Planning Board approved University of New England Institutional Zone Master Plans on February 9, 2009, February 3, 2016, and again on the current plan approved April 19, 2023. In the aforementioned report, the City Planner wrote, in part: "Staff find that the application satisfies the City's Shoreland Zoning Ordinance and Site Plan criteria."

In light of the fact that there continues to be uncertainty about the Harbormaster's role in the approval of UNE's proposed pier. UNE's obligations and the Harbormaster's role are set forth in Section 74-35 of the City Ordinance. It is very important to understand that Section 74-35 was amended in September 2023 in order to clarify the role of the Harbormaster in the process as well as to clarify what an applicant must do to obtain permission. The amendments were drafted by John Schafer and presented to the City Council's Policy Committee by John Schafer on August 7, 2023. Essentially, the amendments created subsections with almost all new language becoming Sections 74-35(c) and (d).

As one can see in Section 74-35, there is no requirement or authority for the Harbormaster to evaluate a pier design or location and no standards or criteria by which any such evaluation would be done. There are no dimensional or design standards for the construction or location of a pier in any city ordinance. Nowhere does the Ordinance state that permission to construct a pier is contingent upon location, orientation, size, depth of water, current, or materials.

The Ordinance begins with **Section 74-35(a)**, which states: "No additions, alterations, new construction or/or changes to an existing wharf, pier or landing shall be made without prior permission of the Harbormaster."

Section 74-35(b) then states: "Permission for the construction of any new wharf or pier within the jurisdictional limits of the City shall not be granted without approval of the Harbormaster, along with federal, state and local governing authorities."

So that applicants can understand what they need to do, **Section 74-35(c)(1)-(10)** provides the detail of what an applicant must do to "obtain permission for any new wharf or pier." In June of 2024, UNE submitted the required information, including all items listed in subsections 1-10.

On August 19, 2024, UNE was notified by the City Manager that "Based on this information and in harmony with my earlier communications, please consider this as formal notification from the City of Biddeford that the application has been found in compliance with the above-mentioned City Code." *See* attached, scan_jbennett_2024-08-19-10-06-53.pdf.

That letter of course did not mean that UNE could begin building the pier. Rather, under Section 74-35, UNE is required to obtain regulatory approvals from entities such as the Army Corps of Engineers, the Maine Department of Environmental Protection, the Saco River Corridor Commission, and the Planning Board (referred to in the Ordinance as Biddeford Code Enforcement).

So that applicants and the Harbormaster would be clear about the Harbormaster's role, **Section 74-35(d)** provides the details of the Harbormaster's role and states: "The process to obtain permission for any new wharf or pier shall be facilitated by the Harbormaster. Initially, the Harbormaster shall be available to guide the applicant through the application process and finally, to sign off that all regulatory approvals have been obtained for construction."

Consistent with practice prior to the 2023 amendments, UNE engaged the Harbormasters and Chair of the Harbor Commission back in 2016 and sought their counsel on the proposed pier project. Their input was considered with some of it incorporated into the design that has been presented to the Planning Board. UNE engaged again with the current Harbormaster in later 2023 and listened to his stated concerns. Both Harbormasters' 2016 and 2023 input is described in detail in the memos from GEI, dated November 28, 2023, and from Baker Design Consultants (later merged into GEI), dated March 22, 2016. These two documents are included in the original Site Plan Application. In its staff report, the Planning Staff recognized the 2023 memo and quoted from it in its staff report.

To date, UNE has obtained required regulatory approvals from the Saco River Corridor Commission, Maine Department of Environmental Protection and the Army Corp of Engineers, which approvals have been provided to the Planning Board in the original UNE submission. The only remaining regulatory approval required under Section 74-35(c)(10) is the Site Plan Review Approval. Once all required regulatory approvals are obtained, the Harbormaster can finally "sign off that all regulatory approvals have been obtained," resulting in UNE having permission from the City to build the pier.

For anybody who still has questions, it could be helpful for them to watch John Schafer's August 7, 2023 discussion with the Policy Committee about the amendments to Section 74-35 that he drafted. A video of the meeting can be found on the City website at https://biddefordme.portal.civicclerk.com/event/1607/media

As one can see for themselves, during that meeting, Mr. Schafer told the Committee that the Harbormaster is "nothing but a facilitator" of the process and that the Harbormaster does not approve piers or issue permits. Mr. Schafer stated that Section 74-35(c)(1) - (10) is "nothing but a blueprint" for achieving approval from other regulators. When pressed by Committee members for clarification, Mr. Schafer emphasized that the Harbormaster is "nothing but a facilitator" and that the Harbormaster only affirms that approvals have been obtained and makes sure that the "blueprint is followed."

Moorings

The Planning Board deliberations also reflected on the potential impacts to moorings. While this is **not** a criterion of the Site Plan review ordinance, UNE will work with the City to mitigate any impacts and has offered to pay for any moorings relocations that may be required.

To clarify the consideration of ownership, as per the Maine State Statue, Title 38, Waters and Navigation, Chapter 1.1.3, Mooring Sites, "Assignment of these mooring privileges does not confer any right, title or interest in the submerged or intertidal lands owned by the state". This statue further clarifies "the harbor master shall assign and indicate only to the masters or owners of boats and vessels the location that they may occupy for mooring purposes and shall change the location of those moorings from time to time when the crowded condition of that harbor or great pond, the need to conform to section 7-A or other conditions render the change desirable".

The actual mooring balls and their associated tackle are the responsibility of the boat owner. The Biddeford Mooring Permit Application clearly states "The location is subject to change at any time at the discretion of Harbor Master or Deputy as conditions dictate.", in coordination with the state statute. Thus, the land is owned by the state, the moorings by the boat owners, and the harbor master has the reasonability to assign and relocate these moorings.

To better understand the potential impacts to moorings, UNE requested from the city it's mooring map, but was informed one was not available. In consultation with the Maine State Bureau of Parks and Recreation, we again requested a copy of the Biddeford Mooring Map. The Submerged Lands Coordinator informed UNE that they had spoken with the harbormaster and confirmed no mooring map was available. They were are to confirm from the harbormaster that two mooring were impacted by the proposed UNE Research Pier development.

In comparison of historical, 09/18/2013, Google Earth imagery, as compared to 2024, there appears to be several unoccupied mooring locations in this general area that could meet the need of relocating the impacted moorings. Additionally, UNE has offered to "swap" one of its current mooring locations for one of the impacted mooring locations. The owners of these moorings do not have a dingy on UNE's abutting shoreline and are already motoring to the moorings from other locations, so depending on where they are coming from, the relocated moorings might be closer to their point of origin.

Analysis documentation
In 2008 and 2009, UNE initiated an analysis of 9 sites along its shoreland to evaluate options for a new pier. Based on the criteria reviewed and UNE's programmatic needs, Site 7 was chosen as the optimal site for UNE. This site then was scrutinized for additional considerations utilized in the ultimate design. This included geotechnical surveys on both land and in water. Contour surveys were conducted twice in the water and then again on land. Evaluations of current and its impacts were conducted. Wetlands were surveyed and impacts analyzed. Initial discussions were had with all regulatory bodies in 2015 and 2016. This included conducting a site visit in 2016, with the harbormasters and chair of the Harbor Commission, whose input was incorporated into the design.

The results of the investigatory process were presented to City staff, including the City Manager, City Planner, Harbormasters, Chair of the Harbor Commission/Planning Board

member and Development staff. That presentation is attached at the end of this letter. The site option plan with the 9 sites and the subsequent evaluation matrix are contained within the presentation. It is important to note that while the estimates of cost are relative, they are 15 years old and a thus not relevant to today's market. Additionally, the size of the pier has direct correlation to the environmental impact. A larger pier requires additional pilings and results in additional shading of the bottom of the river. This is a much more significant consideration of the regulatory agencies in marshy areas, like site 8, as compared to the smaller rock/rubble intertidal zone at site 7.

It is also important to note that the current at site 7 is slower than further out towards the channel, resulting is easier and more controlled docking and less impacts from ice flowing in the spring runoff. This was also recognized in the consultations with the harbor masters during the site visit in 2016, where they advised "*Relocate pier further upstream and change orientation to reduce current exposure. The Harbormasters confirmed that the channel restriction located just seaward of the pier created fast currents that ran parallel to shore. Based on their knowledge of the harbor, they suggested the pier would be better rotated upstream parallel to the current and moved upstream and inshore from the Layout 1 location. This would put the pier in water with less tidal current and make docking easier and safer".* The area just seaward of site 7 is site 8.

Request for NIST application
The National Institute of Standards and Technology, NIST, was solicited for funding by UNE to construct the pier. The application is directly related to financing and it is not in any way related to regulatory permitting. The application does not seek approval of the pier design nor location.

In closing, we hope this helps to address some of the questions related to application. We are confident that our submission conforms to the required city standards and ordinances. We look forward to reviewing the Site plan Review Criteria with you in greater detail at the June 18th meeting.

Sincerely,

Alan Thibeault
Vice President for University Operations

This email originated from outside of UNE.

All, this email was sent to me by the City Solicitor (Harry Center) late last night. In his email Harry states *"I will provide this advice/opinion to the Planning Board before the June 18, 2925 meeting and I would ask the Planning Department to please forward this email to all members of the planning board and the designated official from UNE".* As such, I am forwarding the entire email string and Harry's response.

As always, please do not respond to this email or discuss this matter with other Board members. I have also copied Alan Thibeault of UNE.

Thanks all & looking forward to seeing you all at the site walk on June 9th.
David

Mr. Hass:
Attached is the provision of the City's Shoreland Zoning Ordinance relating to "approval" of piers. There are no standards for "local knowledge"; depth, current, moorings or any other complaints by the opponents of the UNE project.
These are the standards and provisions that the City Planning Board must apply to the application.
Additionally, because this is a non-residential development, site review is also required--however, none of the standards in that provision of the City Code of Ordinances relate to telling an applicant where the location of a pier should be located.
I will provide this advice/opinion to the Planning Board before the June 18, 2925 meeting and I would ask the Planning Department to please forward this email to all members of the planning board and the designated official from UNE. I will continue to follow the law and due process requirements to all parties.
At this time, I see no basis for the City's Planning Board to deny this permit based upon the water depth at the location, the current, or any of the accusations made at the last meeting-as there are no standards within the City's Code of Ordinances/Shoreland Zoning Ordinance that would justify or support the denial of a pier based on such claims by the opponents. If someone can point to a Shoreland Zoning Ordinance provision, City land use standard or other ordinance within the City's jurisdiction to deny this request for approval,

then the Planning Board should consider any such provision and decide. Further if an opponent can point to a City Ordinance provision that allows the City to dictate the location of the pier, I will be happy to review it.
I made that statement at the meeting, in good faith, that after the Planning Board heard from the public, I would give them legal advice regarding my opinion as to the legal standards the Planning Board must apply, as many of the public comments related to issues that are not within the Planning Board's jurisdiction. However I will respond to your email now.
The Planning Board will make its decision based on the standards set forth in the attached Ordinance. I have not located any other City of Biddeford Land Use Ordinance provision related to docks, piers, wharfs and City staff has not alerted me to any others. If you or anyone else are aware of anything within the City's Code (available online at the City's website) please feel free to raise such provisions and staff and I will review them.
Thank you,
Harry B. Center, II Esq.
City Attorney

Attention: Mr. Alan Thibeault, VP of University Operations

RE: Notice to Proceed with External Reviews

Dear Mr. Thibeault,

On August 9, 2024, I received written clarification from Mr. Wayne Duffett, PE of TECAssociates that UNE's proposed Research Pier and Float System has complied with City Code 74-35 subsections (c) 1-10. Those sections are as follows:

(1) A formal boundary survey that has been documented at the Registry of Deeds.
(2) A copy of the boundary survey showing the littoral zone, established by extending property lines seaward.
(3) A location map from a portion of a USGS topographic map or coastal chart.
(4) Distance to navigable channels or any federal navigation project.
(5) Mean high- and low-water boundary.
(6) A plan view on the drawing(s) that shows the location and dimensions of the applicant's structure(s) in relation to the applicant's property lines.
(7) A typical cross section/side view of the applicant's structures on the drawing(s).
(8) Evidence that owners of abutting properties have been notified of the applicant's intended project.
(9) Evidence that the 1) Maine Historic Preservation Commission, 2) Aroostook Band of Micmac, 3) Passamaquoddy Tribe of Indians: Pleasant Point; Indian Township, 4) Houlton Band of Maliseet Indians, and 5) Penobscot Indian Nation have been notified of the applicant's intended project.
(10) Completed applications to the Army Corps of Engineers, Department of Environmental Protection and Biddeford Code Enforcement. A regulatory permit from the Saco River Corridor Commission may also be required in some instances.

Based on this information and in harmony with my earlier communications, please consider this as formal notification from the City of Biddeford that the application has been found in compliance with

the above mention City Code. That finding allows the application to proceed in the next steps of the review process; namely formal review by all agencies except those that are part of the City of Biddeford. After each and all of those processes are complete, the City will move forward with the final review(s) by agents and Committees of the City.

While I don't believe it is necessary, let me empathically state that this communication does not in any form, imply that the City has in any way made a determination that the location submitted has been approved. Said approval will considered after completion of all process and in compliance with applicable laws, regulations. This includes all local ordinances.

Please feel free to reach out to me if you have any questions

Sincerely,

James A. Bennett
City Manager

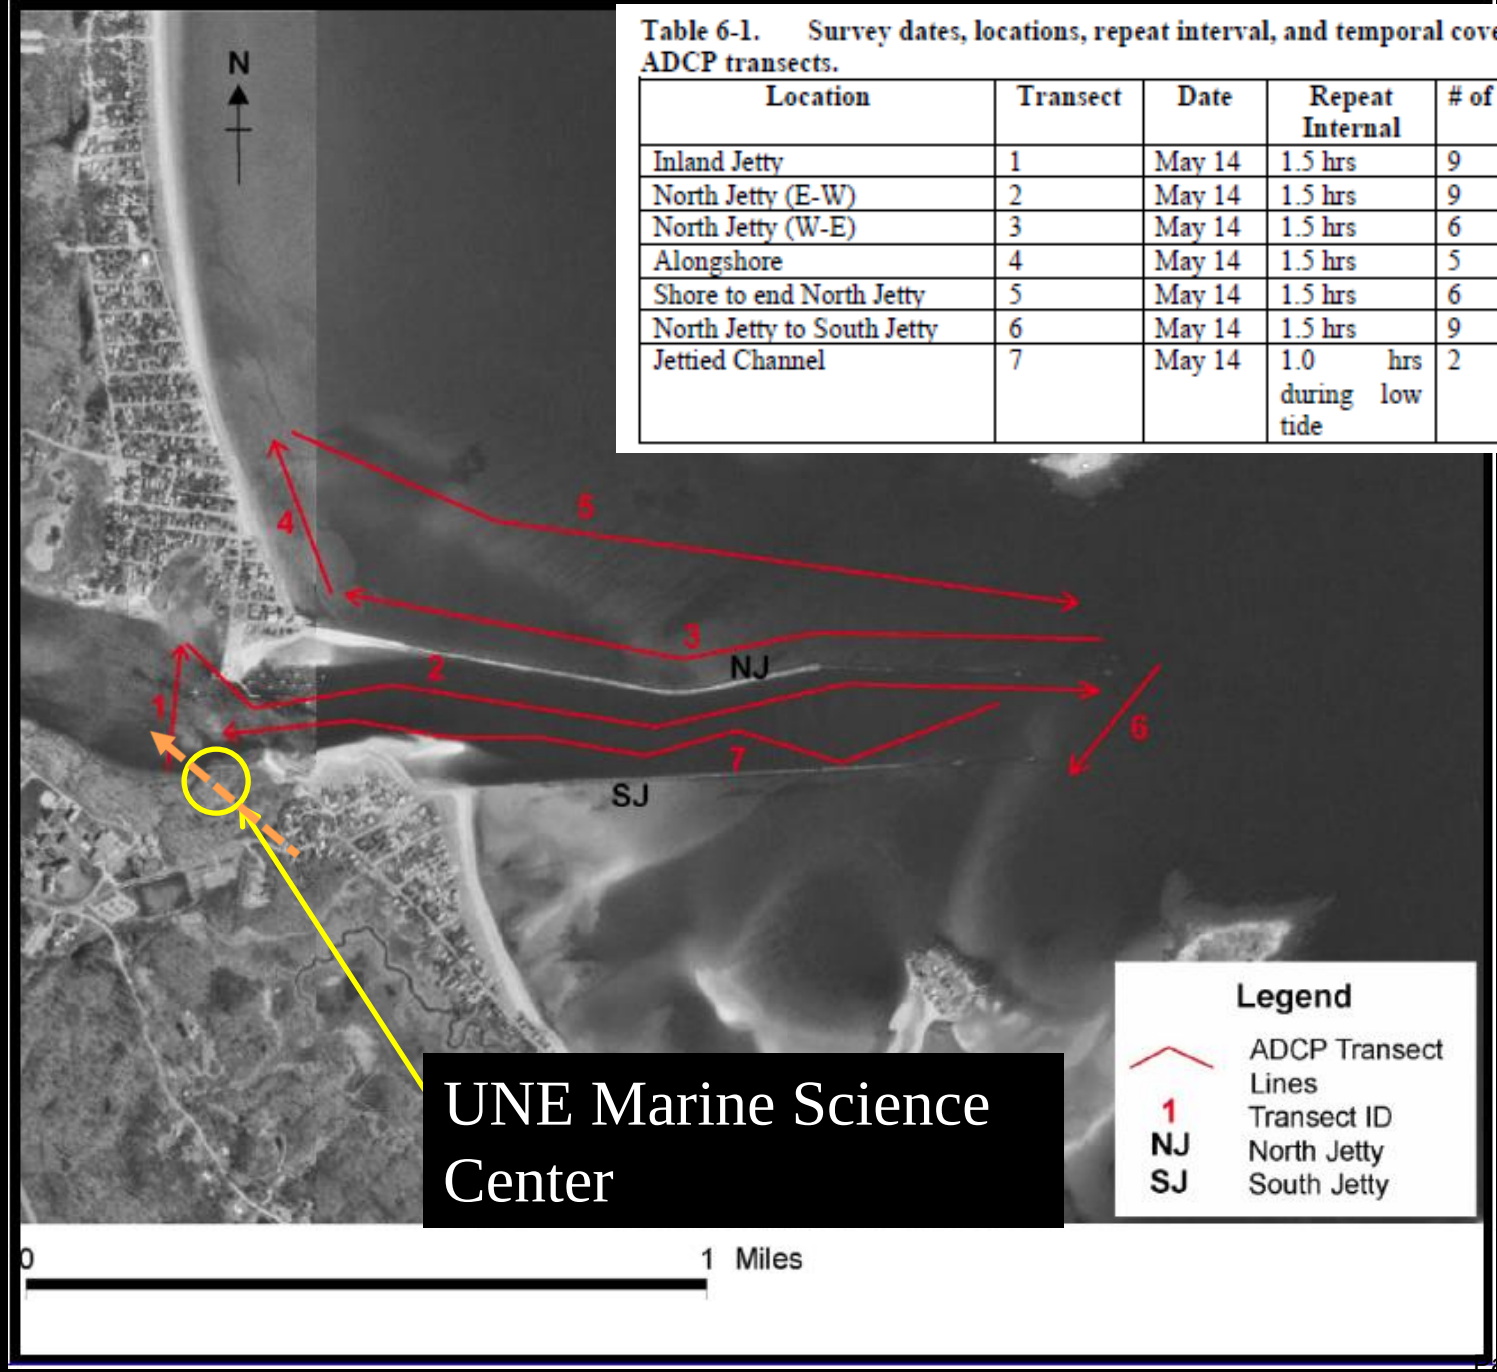
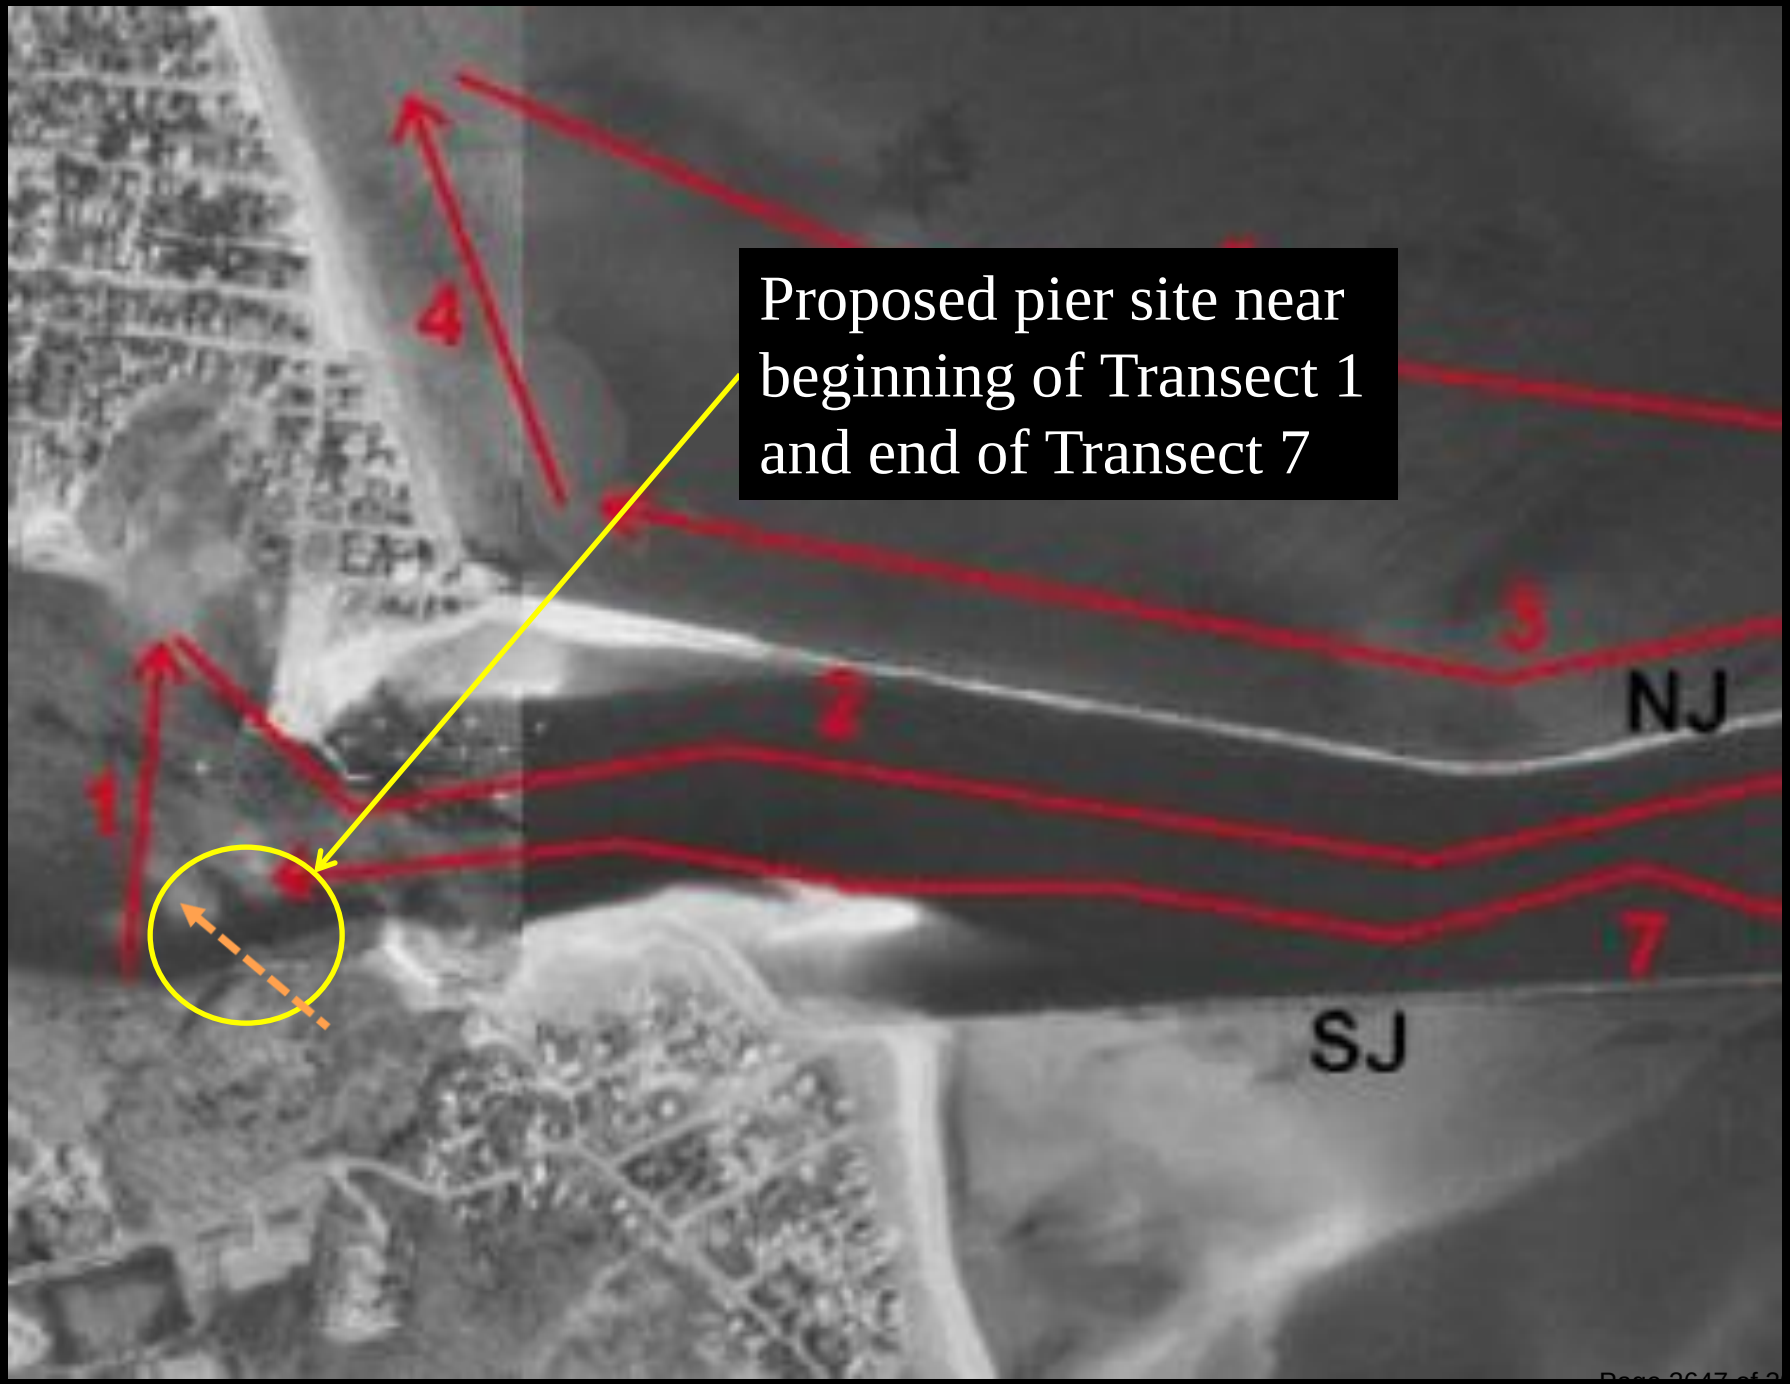
PROJECT ELEVATIONS (BY DATUM)

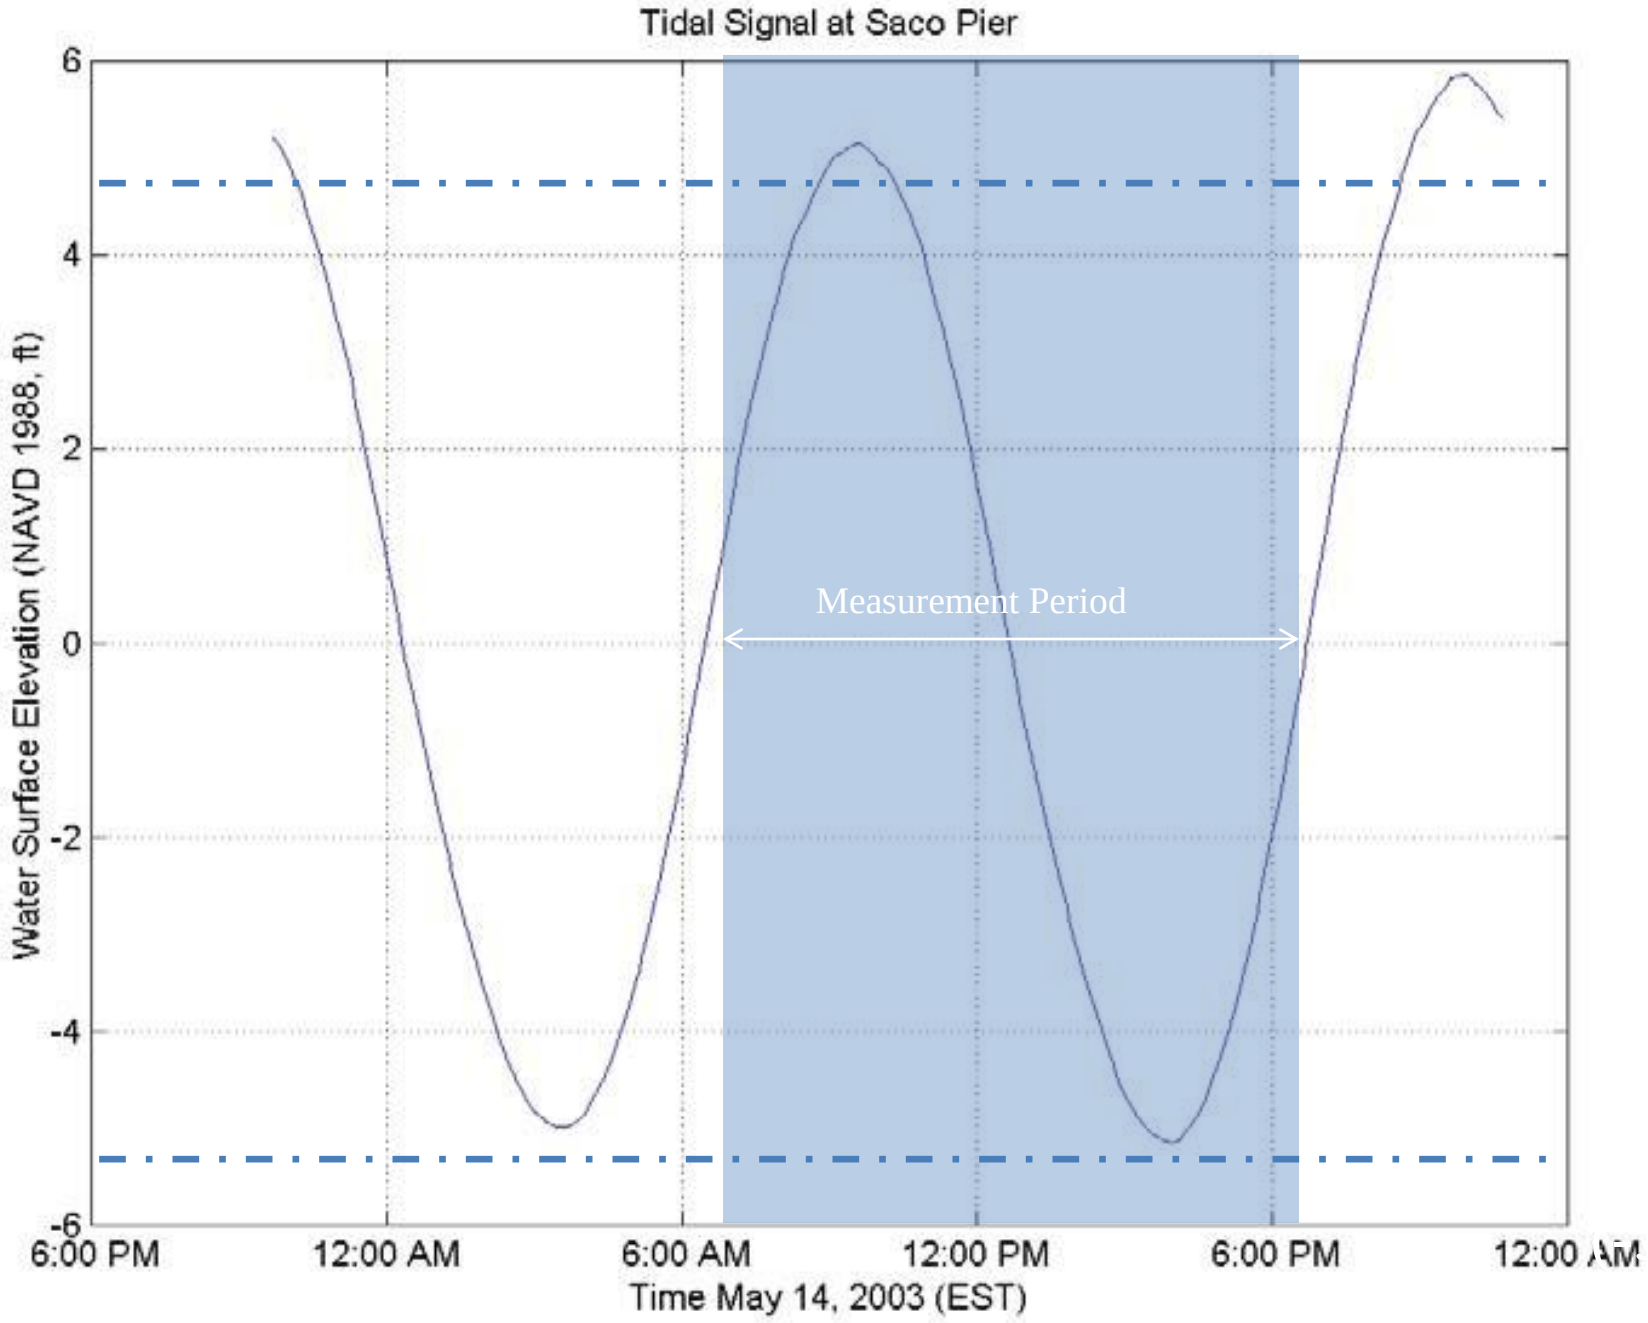
ELEVATION	NAVD88 (ft)	Notes
FEMA Base Flood	13.27	FEMA Zone V2
FEMA Base Flood	14.00	Preliminary Zone VE
Highest Annual Tide	6.65	2013 MEDEP Predictions
MHHW	4.65	BASED ON TIDAL BM "Portland"
MHW	4.22	
NAVD88	0.00	
NGVD29		
MLW	-4.91	
MLLW	-5.25	

1. BASE FLOOD INFORMATION TAKEN FROM FEMA FLOOD INSURANCE RATE MAP
2. HIGHEST ANNUAL TIDE TAKEN FROM MAINE DEP PUBLISHED PREDICTIONS
3. TIDAL INFORMATION TAKEN FROM NOAA PUBLISHED DATA



Observations suggest that this location on the Saco River at times sees higher highs and lower lows than the Portland gage for a given tide cycle, possibly due to river influence.





Lowest Observed Tide = -5.6

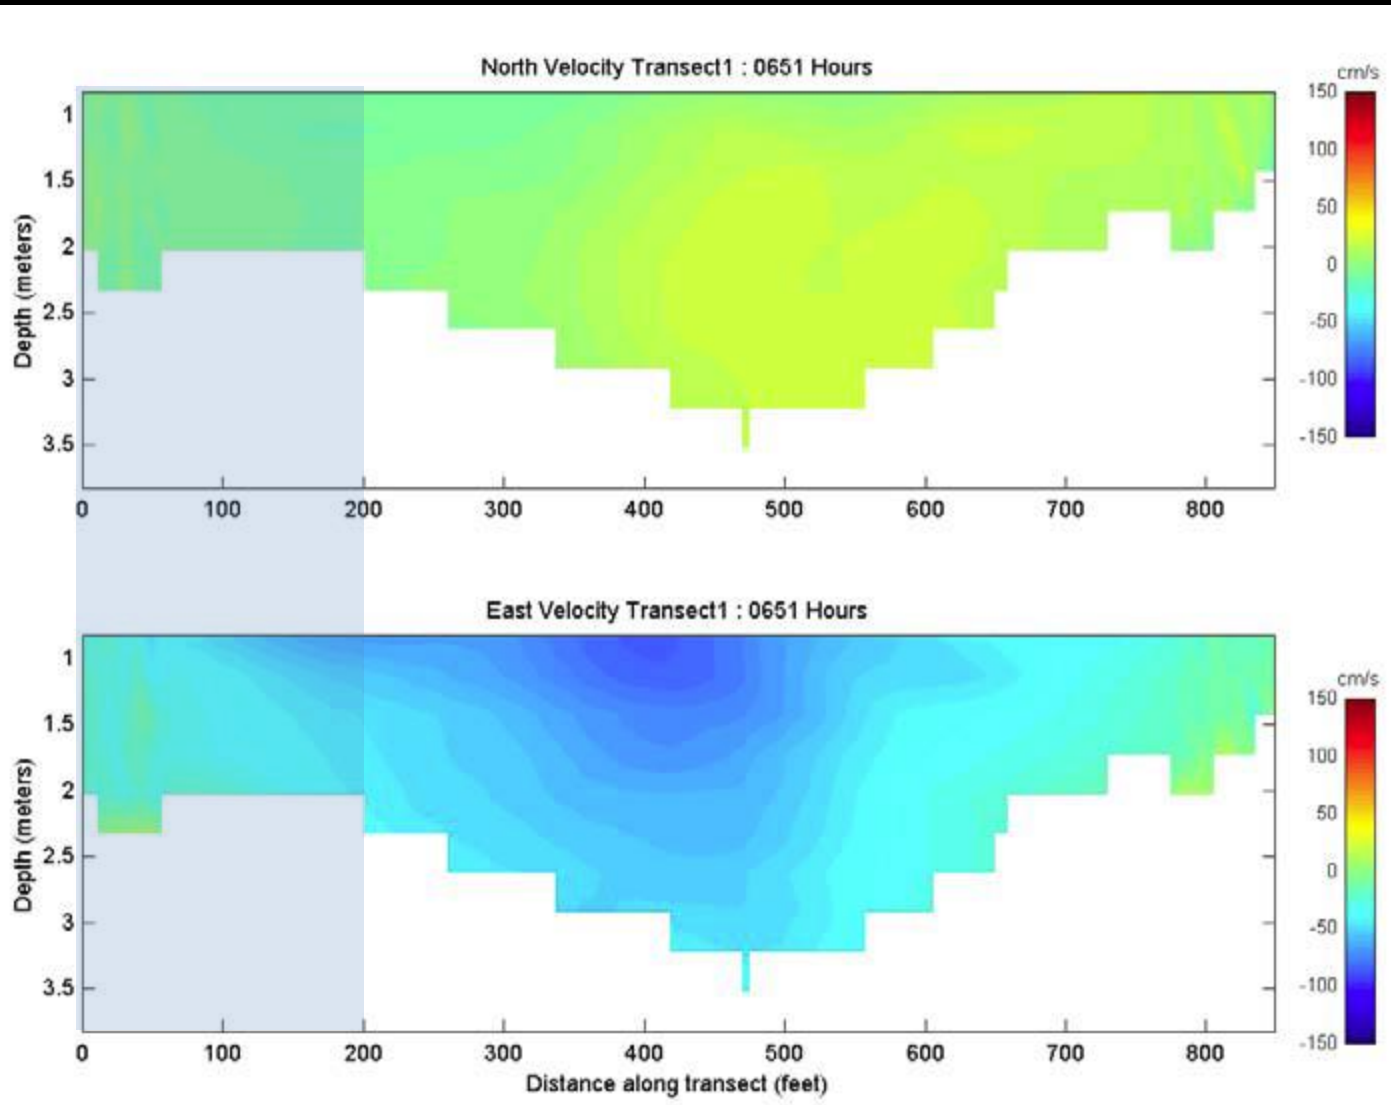


Table 6-1. Survey dates, locations, repeat interval, and temporal coverage of the ADCP transects.

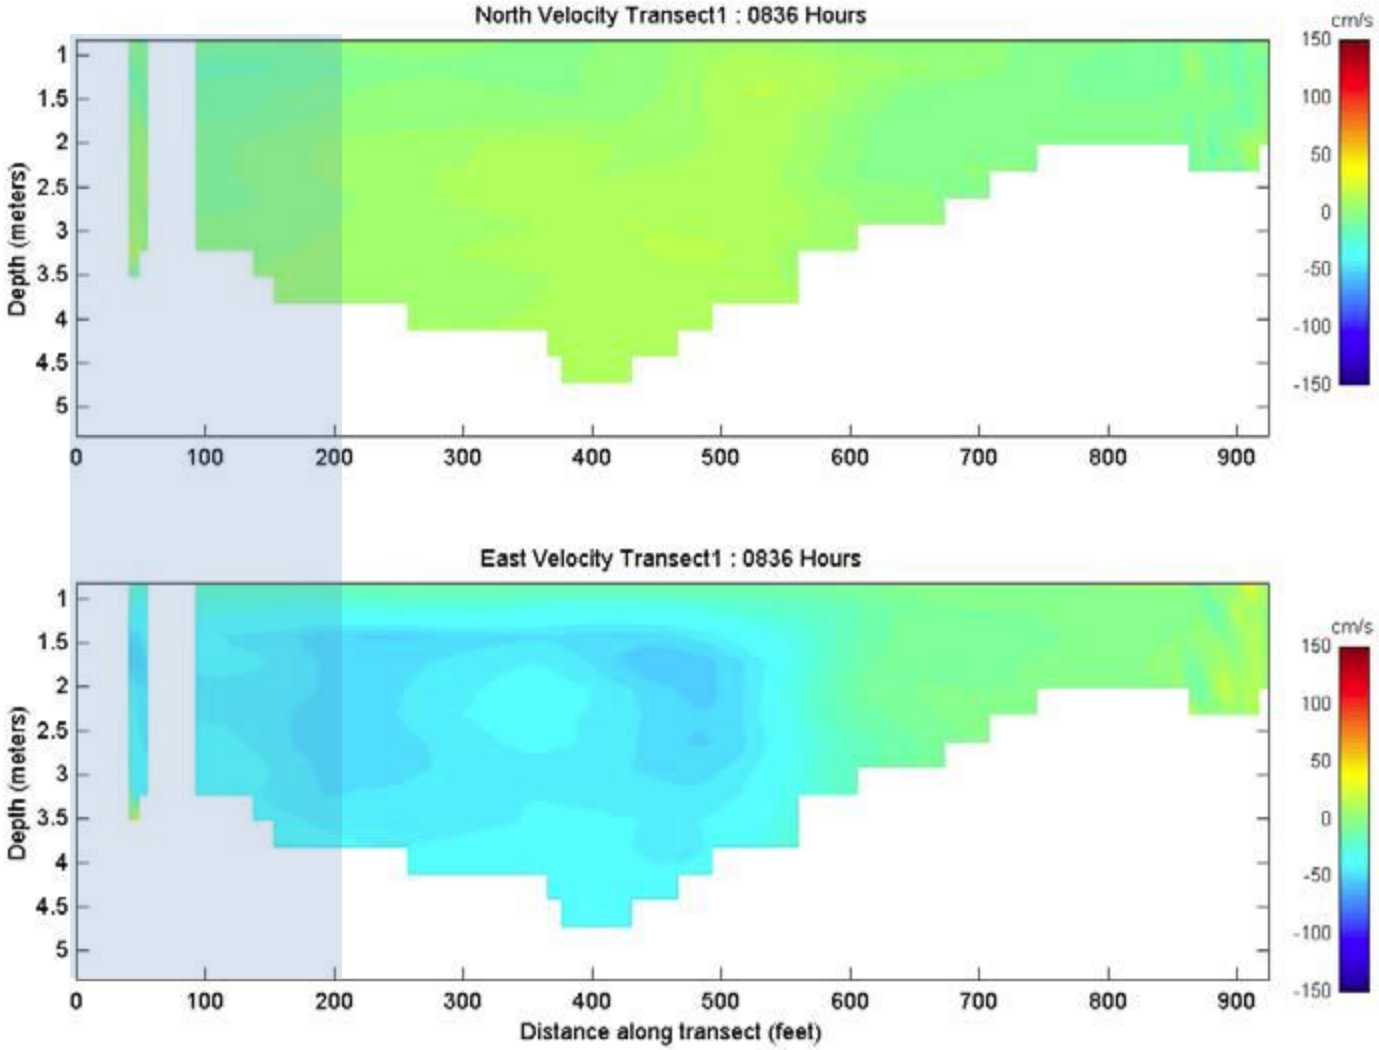

Location	Transect	Date	Repeat Internal	# of Transects
Inland Jetty	1	May 14	1.5 hrs	9
North Jetty (E-W)	2	May 14	1.5 hrs	9
North Jetty (W-E)	3	May 14	1.5 hrs	6

- ***6.5.1 Transect 1***
- The channel geometry along Transect 1 consists of a single, relatively shallow channel. The transect is located just east of the Saco Pier, where a significant reduction in channel width occurs. Maximum depths in the channel at this location are approximately 5m (16.4 ft). The maximum recorded flood velocities were approximately 100-125 cm/s (3.3-4.1 ft/s). The maximum flood currents run in a west to west northwest direction throughout the entire water column. In addition to the westward flow, northward flow occurred on the northern portion of the channel indicating likely eddying around the point on the northern shore. The east/west flow also indicates some eastward flow in the northern extent of the transect, supporting the eddy structure. As the flood tide progressed, the stronger western currents were confined to the southern part of the channel. High tide occurred at 0905 hours and reversal of the flow direction was observed throughout the channel by 1019 hours. The maximum recorded ebb velocities were approximately 100-125 cm/s (3.3-4.1 ft/s) and occurred between 1100 and 1330 hours. These southeasterly ebb currents appear to favor the north side of the channel during the start of the ebb where the strongest currents are confined to the upper 2m of the water column. As the tide progresses, these currents spread to the entire channel area depth and breadth. During the majority of the ebb and flood phases of the tide, the color contour plots show increased turbulence and related eddy formation adjacent to the north shore (between 500 ft [152 m] and the end of transect). The increased turbulence is a result of the protrusion of the northern point (near Saco Harbor) into the channel. This narrowing prevents direct flow into or out of the river channel producing eddies as water tries to enter or exit the reduced-width channel.

Permit Requirements and Timing

- Maine DEP NRPA
- ACOE
- Saco River Corridor Commission
- City of Biddeford
- Harbor Commission
- February 2016 grant funding
- Construction spring 2017

Formal Site Plan Review Application

City of Biddeford – Planning Department
Planning Board Application
P.O. Box 586, 205 Main Street Biddeford, Maine 04005
207-284-9115

Type of Application:

_x_ Shoreland Zoning Permit
_x_ Site Plan Review (Please include checklist)
__ Extraction
__ Conditional Use Permit
__ Subdivision (Please include Checklist)
__ Private Way
__ Other: _____

Applicant Information:

Name: University of New England
Mailing Address: 11 Hills Beach Road Biddeford, Maine
Telephone: 207-602-2365
Email: aphilippe@une.edu

What is your legal interest in the property?

_x_ Owner __ Potential Buyer with Contract __ Lease/Rental Agreement

Owner's Information:

Name: Applicant
Mailing Address: _____
Telephone: _____
Email: _____

Agent's Information:

Name: Tom Saucier, P.E. Site design Associates
Mailing Address: 23 Whitney Way Topsham, Maine 04086
Telephone: 207-449-4275
Email: tsaucier@sitedesignassociates.biz

Engineer/Surveyor's Information:

Name: Agent
Mailing Address: _____
Telephone: _____
Email: _____

Project Location and Lot Information:

Street Address: 11 Hills Beach Road Drainage Watershed: Tidal portion of Saco River
Tax Map: 52 Lot: 4
Current Zoning: IN Shoreland Zoning: Limited Residential
Size of Lot: 49.9 (x)acres ( )s.f. Lot Frontage: 1,489 ft +\-
Existing Use of Property: University use - Girard Marine Science Center

Property currently serviced by:

_x_ City Road __ Public Sewer _x_ Public Water __ Public Trash
__ Private Road __ Septic System __ Private Well _x_ Private Hauler

Slope Conditions in Area of Construction (if applicable):

__Flat (0-3% slope) __Rolling (3-8% slope) _x_ Hilly (8-15% slope) _x_ Steep (15%+ Slope)

Are there any wetlands or waterbodies on the site? _x_ (Yes)__(No) if yes attach information
Is the project within the 100-year floodplain? __ (Yes) _x_ (No) if yes attach information
Do you plan to bring fill onto the lot? _x_ (Yes) __(No) If yes attach information

Description of proposed use of property:

Project/Proposed Use:

University use - Research Pier

Property to be Serviced by:

x City Road __ Public Sewer x Public Water __ Public Trash

__ Private Road __ Septic System __ Private Well x Private Hauler

Limits of Disturbance: 0.5 (x)acres ( )s.f.

Net change in impervious cover: 0.249 (x)acres ( )s.f.

Is this project part of a larger project? __(Yes) x (No)

Is the project proposing a new Private or Public Road? __(Yes, Private) __(Yes, Public) x (No)

Is this project within the Urbanized Area/MS4 (*see City Drainage Map*) x (Yes) __(No)

Is the project proposing any Stormwater facilities/BMPs? x (Yes) __(No)

Will a Traffic Movement Permit (TMP) be required?: __(Yes) x (No)

x **If in a Shoreland Zone:**

Percent of residential lot coverage (Max 20%): N/A

Percent of structure expansion (Max 30%): N/A

__ **If Subdivision Review, number of lots proposed:** _____

__ **If a Private Way is proposed, number of lots served:** _____

If Site Plan Review, you must provide the following information:

Total new square feet footprint of structure: _____

Total new square feet paving/parking: 10,850 +/-

Waiver Requests (attach details):

1. See cover letter and June 9, 2025 responses to comments
2. _____
3. _____
4. _____
5. _____

Required Submittal Attachments:

A. Letters of Approval

x Fire Department – Contact Chief or Deputy Chief – 282-9986 (Request sent; previously revised plans

__ Ability to Serve for Water Service – Maine Water – 282-1543 in response to BFD comments.)

__ Ability to Serve for Sewer Service – Engineering Department – Tom Milligan 284-9118

__ Police Department – e-911 Road Name Designation – Contact Joanne Fisk 282-5127

__ Ability to Serve for Electrical Service-CMP-1-866-225-4200

x Letter to Planning Board describing project, Waiver requests, proposed improvements, addressing permit requirements, etc.

B. Photographs of Site.

C. Architectural renderings/drawings of proposed buildings, as required.

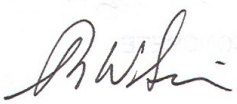
D. Engineering Plans, as required.

E. Stormwater Management Report, as required.

Fees (Due at time of Submission):

- $75 Nonrefundable Administration Fee is required for every application.
- Refer to "Attachment A Fees and Charges" of the Land Development Regulations for more information. Consult with Planning Staff if you have questions.

Required Signatures:



By signing this application, as the foresaid applicant or authorized agent:

- I certify that I have read and completely understand the application;
- I certify that the information contained in this application and its attachments are true and correct;
- I understand that all information provided on this form and all other documents submitted as part of my proposal is a matter of public record;
- I understand that copies of this information may be supplied upon request to an interested party.
- I understand that additional funds may be required through the course of the review for special studies, legal review costs, and/or engineering review.
- I understand that by submitting an application I am not guaranteed a place on any particular agenda. I further understand that the City Planner will place me on an agenda for review when the application is deemed substantially complete.

Will the proposed project cause 1 acre or more of site disturbance? __(Yes) _x_(No)

- **If Yes, applicant is responsible for any required Maine Construction General Permits and shall comply with the requirements of DEP Chapter 500 Stormwater Regulations, as they apply.**

Signature of Applicant: ___  **_____Date ___06/09/25_____**

Signature of Property Owner: ____  **_____Date ___06/09/25_____**

DIGITAL SUBMITTAL REQUIREMENTS FOR ALL SUBMITTALS:

A) PDF OF SIGNED APPLICATION

B) PDFs OF ALL DRAWING SETS AND OTHER REQUIRED SUBMITTAL ATTACHMENTS NOTED ABOVE

HARD-COPY SUBMITTAL REQUIREMENTS FOR PLANNING BOARD APPLICATIONS:

A) SEVEN (7) FULL-SIZE PAPER COPIES OF DRAWING SETS

DIGITAL SUBMITTAL REQUIREMENTS FOR FINAL APPROVAL:

A) INDIVIDUALLY NAMED PDFs OF EACH DRAWING (NOT A COMBINED PDF SET)

- Individual Drawing PDF Naming Format: 'PROJECT/SHEETSET NAME_INDIVDUAL DRAWING NAME.pdf'

B) PDF COPIES OF ALL PERMIT APPROVALS, APPLICATIONS, REPORTS, NARRATIVES, LETTERS, ETC.

C) FINAL CAD REFERENCE FILES IN DWG FORMAT (SURVEY & PROPOSED DESIGN LINEWORK)

- All drawings & CAD reference files must be to-scale and within the following coordinate systems:

- MAINE STATE PLANE WEST NAD83 (Horizontal Datum) & NAVD88 (Vertical Datum)

HARD-COPY SUBMITTAL REQUIREMENTS FOR FINAL APPROVAL:

A) THREE (3) FULL-SIZE PAPER COPIES OF INDIVIUDAL DRAWINGS REQUIRING BOARD SIGNATURE

B) ONE (1) FULL-SIZE PAPER COPY OF ENTIRE DRAWING SET FOR ENGINEERING RECORDS

PLEASE CONFIRM WITH PLANNING STAFF FOR CLARIFICATION

Attachment 2
Letter of Agent Authorization

UNIVERSITY OF NEW ENGLAND

Biddeford Campus
11 Hills Beach Road
Biddeford, ME 04005
(207) 283-0171 T

Portland Campus
716 Stevens Avenue
Portland, ME 04103
(207) 797-7261 T

May 29, 2023

Mr. Tom Saucier
Site Design Associates
23 Whitney Way
Topsham, Maine 04086

TO WHOM IT MAY CONCERN:

This letter authorizes Tom Saucier, Site Design Associates, to serve as an agent for University of New England for the purpose of permitting the proposed installation of a research pier and float on its Biddeford campus.

Sincerely,

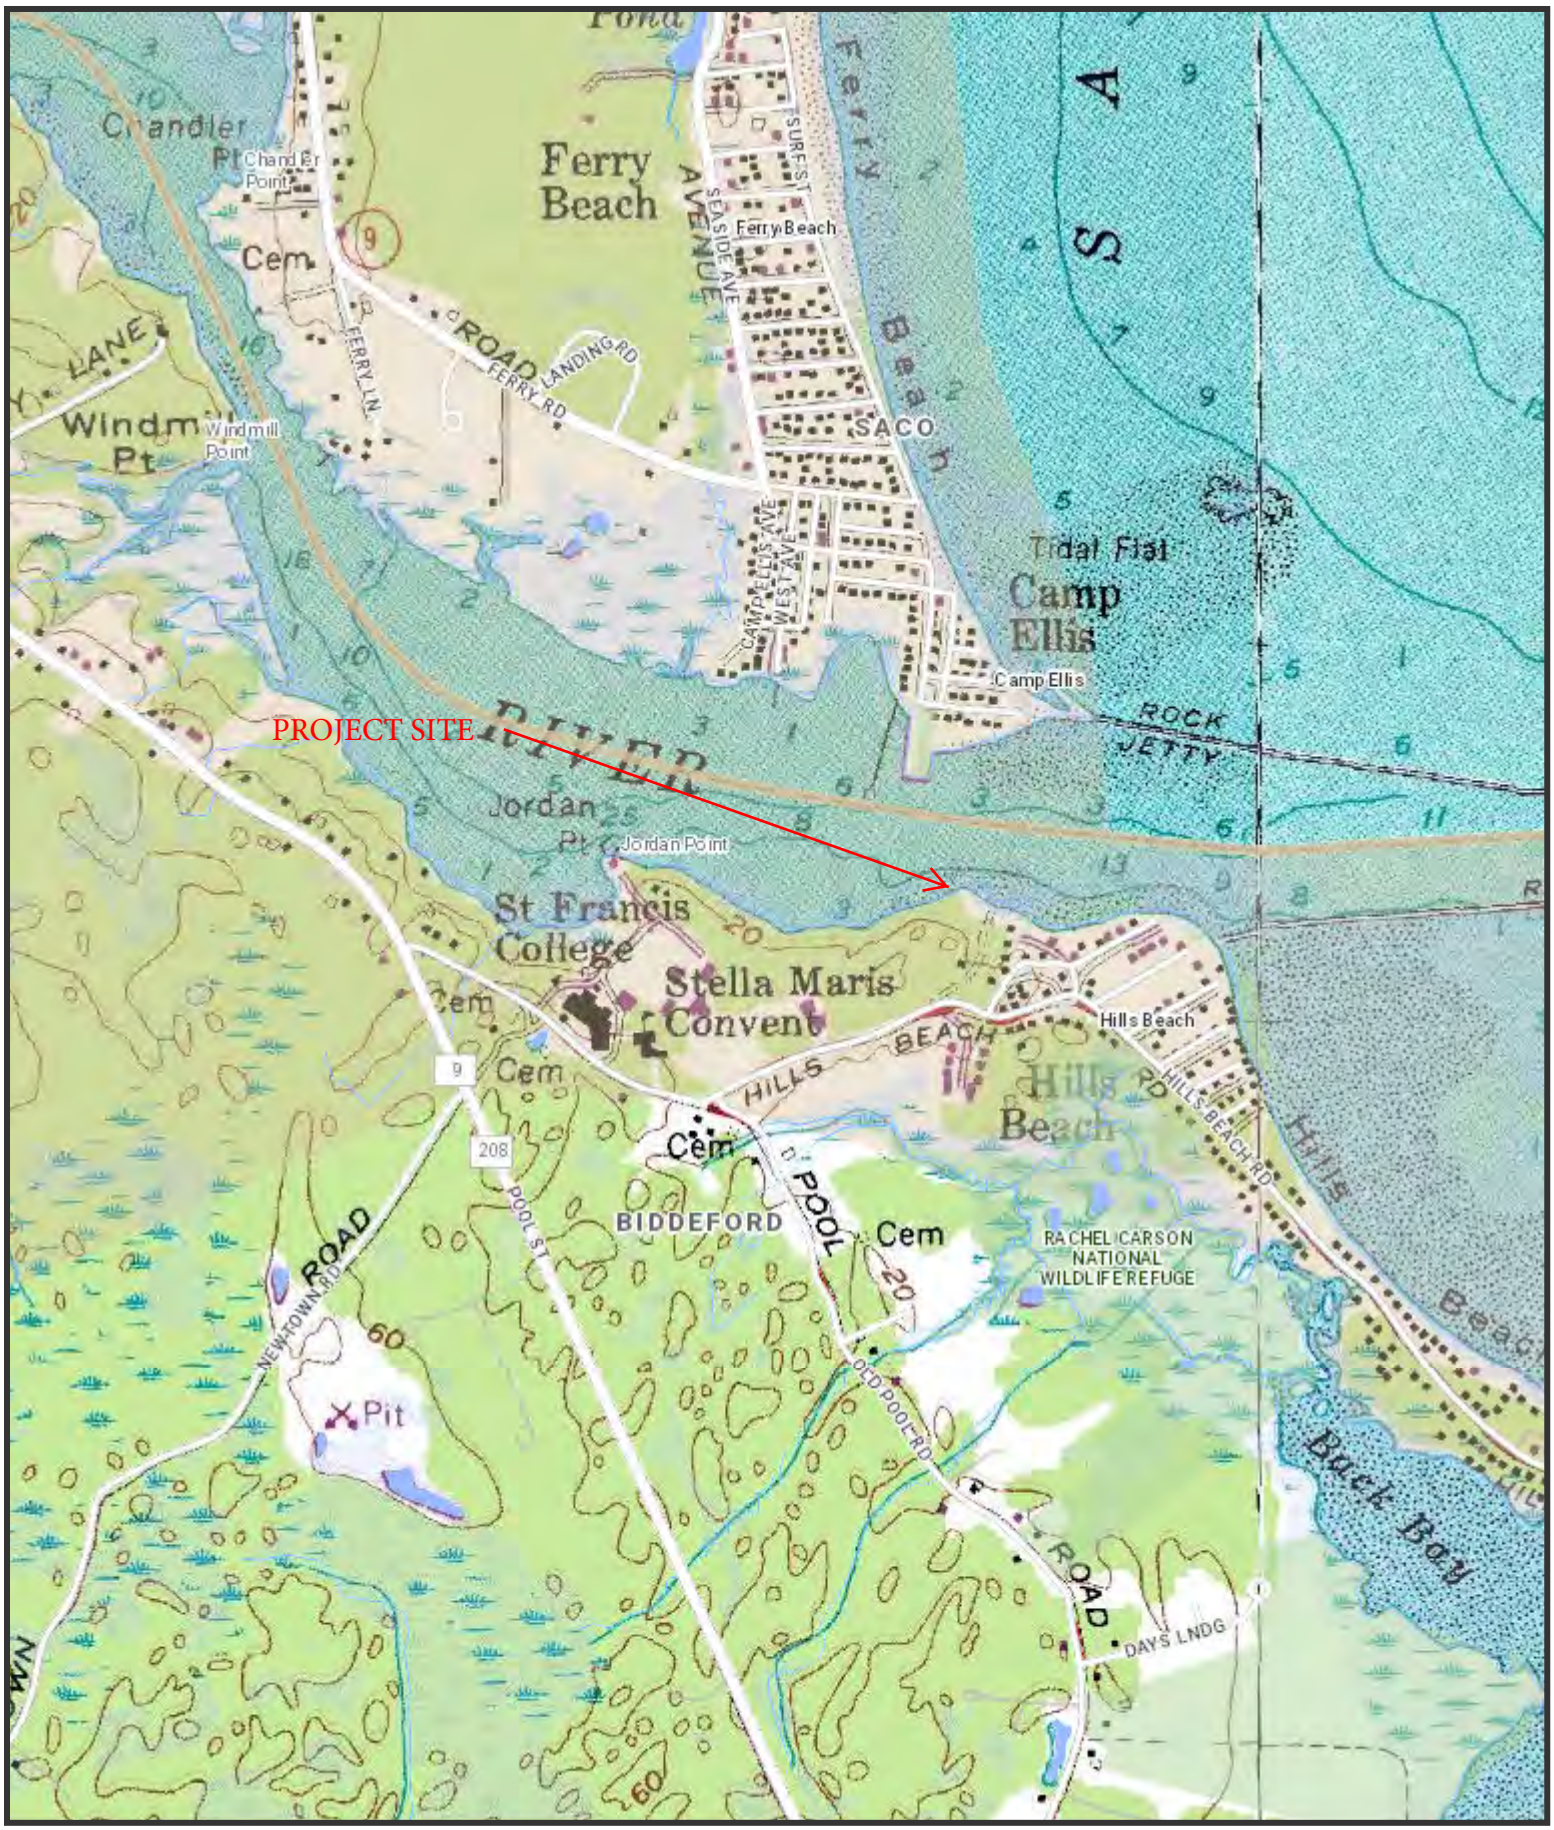
Alan Thibeault
Vice president for University Operations

Attachment 3
Site Plan Checklist

CITY OF BIDDEFORD - SITE PLAN & SUBDIVISION APPLICATION DRAWING CHECKLIST *LAST REVISED: 11/26/2024*

CHECKLIST DIRECTIONS:

1. The following checklist must be completely filled out by the applicant and included on all preliminary and final Site Plan & Subdivision submittals. No checklist is required for sketch submitta
2. Applicant to confirm all of the items listed are included within the submittal Any missing items must have adequate reasoning to justify their absence
3. City to review applicant's submittal and checklist responses. Projects missing substantial submittal information with non-acceptable reasonir will be rejected and required to resubmit
4. Items in **BLACK** are required for 'Preliminary' approval & 'Final' approval
5. Items in **BLUE** are only required for 'Final' approval



SUBMITTAL INFORMATION - TO BE FILLED OUT BY APPLICANT	
Project Name:	University of New England (UNE) Marine Science Center Research Pie
Planning Board # (if available):	2024.34
Applicant Name/Info:	University of New England
Submittal #/Type (Prelim/Final):	Preliminary
Submittal Date:	6/10/2025

E	Tax Map and Lot ID	YES	C-001			
F	Zoning & Shoreland Zone Information	YES	C-001			
G	Existing Use Description	YES	C-001			
H	Proposed Use Description	YES	C-003			
I	Required Waiver/Variances (Yes/No); if yes, plan must clearly list waivers/variances requesting	YES	G-001			
J	Name of Drainage Watershed	YES	C-001			
K	Within the MS4 Urbanized Area (Yes/No)	YES	C-001			
L	Natural resources (streams, wetlands, etc.) located on-site or adjacent to the property (Yes/No)	YES	C-001			
M	Within the 100-year Flood Zone (Yes/No)	YES	C-001			
N	Public Road Proposed (Yes/No)	NO	N/A	There are no public roads onsite		
O	Private Road Proposed (Yes/No)	YES	C-001			
P	Public Sewer Connection (Yes/No)	YES	C-001	There are no proposed improvements to the public sewer		
Q	Public Storm Drain Connection (Yes/No)	NO	N/A	There are no public storm drains onsite		
R	Limits of Disturbance in square feet and acres	YES	C-005			
S	Pervious Land Cover square footage, existing and propose	YES	C-003			
T	Impervious Land Cover square footage (Pavement/Gravel), existing and propose	YES	C-003			
U	Building Roof square footage, existing and propose	YES	C-001			
V	Assigned Planning Board Numbe	YES	G-001			
W	Estimated cut/fill earthwork volumes. If disturbing within the Flood Zone, a separate set of earthwork volumes required (overall site vs. within flood zone	YES	C-007, C-007			
3	**EXISTING CONDITIONS PLAN**					
A	Horizontal & Vertical Datums annotated (NAD83 & NAVD88)	YES	C-001			
B	Property & Right-of-Way Lines	YES	C-001			
C	Boundary line information (bearings, distances, etc.	YES	C-001			
D	Property pin and monumentation locations	YES	C-001			
E	Existing easements with proper ownership identifie	YES	C-001			
F	Road Names & Individual Lot Labels (Map, Lot, Owner, Acreage	YES	C-001			
G	Location of any Natural Resources and their respective buffers (wetlands, streams, etc	YES	C-001			
H	100-year Flood Zone Limits & Elevation	YES	C-001			
I	Existing contours with adequate contour labelling; minimum 1' contour interva	YES	C-001			
J	Existing building FFEs annotate	YES	C-001			
K	Spot elevations for all tie-in locations (curb cuts, property line	YES	C-001			
L	Existing buildings & structure	YES	C-001			
M	Existing pavement areas & number of parking space	YES	C-001			
N	Existing ADA ramp geometry, detectable warning plates, and ADA parking space	YES	C-001			
O	Existing site features (sidewalks, retaining walls, curbing, lightpoles, guide rails, dumpsters, fencing)	YES	C-001			
P	Existing signage and striping	YES	C-001			
Q	Existing underground utility locations (storm, sewer, force main, water, gas, elec, tel	YES	C-001			
R	Existing above-ground utility locations (manholes, catch basins, utility poles, hydrants, transformers, riprap)	YES	C-001			
S	Rim, invert in, invert out, pipe size, cardinal direction (N, E, S, W) information for any existing utility infrastructure being tied into (upstream/downstream/outfalls	YES	C-001			
T	Existing tree lines, street trees, free-standing trees (12" or larger diameter at breast height), and vegetation	YES	C-001			
U	Location of any borings, drinking wells, and monitoring well	YES	C-001			
4	**SITE DEMOLITION & EROSION CONTROL (E&SC) PLAN**					
A	Limits-of-disturbance outlined and acreage annotate	YES	C-005			
B	Location of any Natural Resources and their respective buffers (wetlands, streams, etc	YES	C-001			
C	100-year Flood Zone Limits	YES	C-001			
D	Callout existing site features to be demolished/removed/replace	YES	C-002			
E	Callout existing utilities to be demolished/removed/abandoned-in-plac	YES	C-002			
F	Hatch existing buildings and pavement to be remove	YES	C-002			
G	Construction Entrance location(s)	YES	C-005			
H	Perimeter E&SC control location(s) (i.e. silt fence, erosion berm mix	YES	C-005			
I	Stockpile and staging area(s) identified (with proper perimeter contro	YES	C-005			
J	Inlet protection location(s)	YES	C-005			
K	Note requiring contractor to implement dust control measures throughout construction	YES	C-012			
L	Note requiring contractor to pave utility trenches within right-of-way within 3 days of excavation or prior to any rain event	N/A	N/A	No utilties proposed within right-of-way		
M	If groundwater expected, show dewatering/silt bag location(s); show temporary pumping routing	YES	C-014			

	N	If large development is proposed with an extensive underground stormwater conveyance network, identify how SWM infrastructure and BMPs will be protected during construction and if sediment traps/basins are needed	N/A		No extensive underground SWM infrastructure is proposed.		
5		**SITE PLAN/SUBDIVISION PLAN**	YES				
	A	Partial Site Plans needed for any viewport scale greater than 1"=20	YES	C-003			
	B	Existing property and right-of-way lines	YES	C-003			
	C	Proposed subdivision lot lines and labels	YES	C-003			
	D	Required Zoning Setbacks shown with dimensions and annotation	YES	C-003			
	E	Bulk requirement summary table (zoning/parking calculations	YES	C-003			
	F	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.	YES	C-003			
	G	100-year Flood Zone Limits	YES	C-003			
	H	Proposed building outlines, door entrances and loading docks	YES	C-003			
	I	Proposed building labels	YES	C-003			
	J	Proposed road & sidewalk extents; provide clear annotation if roads will be public or private	YES	C-003			
	K	Proposed parking and accessible parking locations; annotate parking space count	YES	C-003			
	L	Proposed signage, parking striping, and traffic striping	YES	C-003			
	M	Detailed ADA ramp geometry, detectable warning surfaces, and ADA parking striping/signage; existing & proposed	NO		No ADA ramps or parking are proposed		
	N	Proposed site features (i.e. curbing, walls, fencing, guiderail, fire hydrant, transformers, light pole locations)	YES	C-003, C-004, C-006, C-007			
	O	Proposed landscaping; detailed landscaping design should be shown on separate plan	YES	C-015, C-016			
	P	Designated snow storage areas	NO		No snow storage areas are proposed		
	Q	Proposed dumpster locations and trash removal access	NO		No dumpsters or trash removal are proposed.		
	R	Linear dimensions of all drive aisles, sidewalk widths, parking spaces, loading dock	YES	C-003, C-006, C-007			
	S	Radial dimensions for all curbs, landscaped islands, sidewalk	YES	C-003			
	T	Public/private road centerline stationing shown, labelled every 0+50' with curve dat	YES	C-003, C-006, C-007			
	U	If Private Road is proposed, final recorded plans must clearly note that proposed private roads will not be submitted in the future for public acceptanc	NO		Will be provided at a later date		
	V	If Private Road is proposed, final recorded plans must clearly note that the City is not responsible for any maintenance, repair, plowing, or trash removal of proposed private roads	NO		Will be provided at a later date		
	W	Planning Board signature block for final recording	YES	G-001			
6		**GRADING PLAN**	YES				
	A	Partial Grading Plans needed for any viewport greater than 1"=20	YES	C-004, C-006, C-007			
	B	Limits-of-disturbance outlined and acreage annotated	YES	C-004, C-006, C-007			
	C	Proposed Building Labels with Individual Finished Floor Elevations (FFEs	YES	C-004, C-006, C-007			
	D	Existing contours with adequate contour labelling, screened; minimum 1' contour interva	YES	C-004, C-006, C-007			
	E	Proposed contours with adequate contour labelling; minimum 1' contour interva	YES	C-004, C-006, C-007			
	F	Detailed grading for all ditches, swales, outfalls, and ripra	YES	C-004, C-006, C-007			
	G	All proposed contours tie-into existing contours at limits-of-disturbance outlin	YES	C-004, C-006, C-007			
	H	Existing spot elevations for all asphalt, curb, and SWM BMP tie-in location	YES	C-004, C-006, C-007			
	I	Location of any Natural Resources and their respective buffers (wetlands, streams, etc.	YES	C-004, C-006, C-007			
	J	100-year Flood Zone Limits	YES	C-004, C-006, C-007			
	K	Proposed spot elevations for all important roadway geometric points (including but not limited to: parking/drive aisles, building corners/entrances, retaining walls, loading docks, EOP/curblines)	YES	C-004, C-006, C-007			
	L	Proposed spot elevations for all ADA ramp/landing/parking stall geometry point	N/A	No new ADA proposed			
	M	Proposed % slope arrows for all ADA parking spaces and sidewalk	N/A	No new parking proposed			
	N	Proposed longitudinal % slope arrows for drainage ditch centerline	YES	C-004, C-006, C-007			
	O	Proposed % slope arrows for roads, parking areas, and landscape tie-in area	YES	C-004, C-006, C-007			
	P	Estimated cut/fill earthwork volumes. If disturbing within the Flood Zone, a separate set of earthwork volumes required (overall site vs. within flood zone	YES	C-004, C-006, C-007			
7		**ROAD PROFILES (if public/private road proposed)**	YES				
	A	Existing surface; dashed and screened	YES	C-006, C-007			
	B	Proposed surface; continuous and bold	YES	C-006, C-007			
	C	Road design speed must be clearly identified	YES	C-006, C-007			
	D	Corresponding centerline stationing and curve data annotation	YES	C-006, C-007			
	E	All vertical curves must identify the proposed 'K' values and confirm they meet the minimum design speed thresholds listed in AASHTO's Green Book Tables 3-35 & 3-3	YES	C-006, C-007			
	F	Clear annotation if proposed road will be public or private	YES	C-006, C-007			
	G	If Private Road is proposed, plans must clearly note that proposed private roads will not be submitted in the future for public acceptanc	YES	C-003			
	H	If Private Road is proposed, plans must clearly note that the City is not responsible for any maintenance, repair, plowing, or trash removal of proposed private road	YES	C-003			
8		**UTILITY PLAN**					
	A	Existing underground utility locations; screened (storm, sewer, force main, water, gas, electric, telecom)	YES	C-004			
	B	Existing above-ground utility locations; screened (manholes, catch basins, utility poles, hydrants, riprap)	YES	C-004			
	C	Rim, invert in, invert out, pipe size, cardinal direction (N, E, S, W) information for any existing utility infrastructure being tied into (upstream/downstream/outfalls	YES	C-004			
	D	Proposed underground utility locations; bold (storm, sewer, force main, watergas, electric, telecom, lighting)	YES	C-004, ES1.1			
	E	Proposed above-ground utility locations; bold (manholes, catch basins, utility poles, hydrants, transformers, riprap)	YES	C-004			
	F	Proposed storm culverts, outfalls, and riprap locations and size	YES	C-004 to C-007			
	G	Storm/sewer structure labels must include: rim, inverts in, inverts out, pipe sizes, cardinal directions (N, E, S, W)	YES	C-004 to C-007			
	H	Storm/sewer pipe labels must include: linear footage, pipe size, material, slop	YES	C-004 to C-007	Additional information can be found in the SWM Report		
	I	Flow directional arrows for storm & sewer pipes	YES	C-004 to C-007			
	J	Proposed & existing site features shown that could conflict with proposed utilities (trees, signs, lightpoles, bollards, foundations, guiderails	YES	C-004 to C-007			
	K	All storm drains must be sized to convey the 25-year storm	YES	C-004 to C-007	See SWM Report		
	L	Sewer force main sizes and invert elevations	NO	N/A	No force main proposed		
	M	Sewer pump station locations, model, rim, inverts, pipe sizes, cardinal directions (N,E,S,W); additional details and hydraulic calculations required for any Public pump station proposed.	NO	N/A	No pump stations proposed		
	N	Locations, sizes, and elevations of any: grease traps, oil-water separators, septic systems, drinking wells	NO	N/A	None proposed		
	O	Proposed water sizes labelled	NO	N/A	None Proposed		
9		**UTILITY PROFILES**					
	A	Utility profiles required for**all** gravity storm drain and sewer pipes proposed: within the right-of-way, within private or public roads, for non-driveway culverts, and for any public infrastructure tie-ins	NO	N/A	No utilties proposed in ROW		

B	Existing surface; dashed and screened	NO	N/A	No utilties proposed in ROW		
C	Proposed surface; continuous and bold	NO	N/A	No utilties proposed in ROW		
D	Storm/sewer structure labels must include: rim, inverts in, inverts out, pipe sizes, cardinal directions (N, E, S, W)	NO	N/A	No utilties proposed in ROW		
E	Storm/sewer pipe labels must include: linear footage, pipe size, material, slop	NO	N/A	No utilties proposed in ROW		
F	Existing and proposed gravity pipe crossings shown; sizes labelled and depths/clearance annotated	NO	N/A	No pipe crossing proposed		
G	Existing and proposed electric/water/telecom/gas crossings shown at approximate depths; sizes labelled and depths/clearance annotatec	YES	ES1.1			
10	**DETAILS**					
A	Road section detail, including pavement/gravel depths & cross slope	YES	C-008, C-009, C-010			
B	Sidewalk, paver, crosswalk, and any other pavement section detail:	N/A	None proposed			
C	Pavement sawcut & shiplap details	YES	C-003, C-006, C-007			
D	Utility trench/backfill detai	YES	C-011			
E	All site feature details; curbing, retaining walls, fencing, guiderails, dumpsters, et	YES	C-011, C-013, C-014			
F	Signage, striping, and ADA details	N/A	N/A	No signage or striping proposec		
G	E&S notes and details	YES	C-012, C-013, C-014			
H	Utility structure details (manholes, cleanouts, fittings, handholes, transformer pads, hydrants)	YES	C-013, C-014			
I	Storm outfall & riprap details	YES	C-011			
J	Drainage ditch cross section identifying minimum depth, minimum bed width, and maximum side slopes	NO	C-013, C-014			
K	Pump station, grease trap, oil-water separator, septic, drinking well detail	N/A	N/A	None Proposed		
L	Conduit section details	N/A	N/A	None Proposed		
11	**LANDSCAPING, LIGHTING & PHOTOMETRIC PLANS**					
A	As required by ordinance; at a minimum: locations, counts, lighting models, and landscaping species must be identifiec	YES	C-015, C-016, ES1.1			
B	Landscaping & lighting details	YES	C-015, C-016, ES1.1			
12	**DOCUMENTS/REPORTS/CALCULATIONS**					
A	On initial preliminary submittal applications, applicant must submit a development review and inspection fee. Applicant to coordinate fee amount with City Planner prior to submittal. This fee will be drawn against to cover the following type of services throughout the project life cycle (and may require replenishing): i. 3rd Party City Peer-Review ii. Site Inspections during the permitting process iii. Erosion & Sediment Control Inspections during construction iv. Right-of-Way Inspections during construction	Yes				
B	Stormwater Management Report, including: 1. Predevelopment & Post-development Drainage Area Maps, including: a. Subdrainage areas delineated and labeled b. Points of Interest/Analysis shown and labeled c. Hatching for different land cover areas (impervious, pervious, gravel) within each applicable USDA soil boundary d. Time of concentration (Tc) paths & durations e. Four City-standardized stormwater summary tables 2. If any SWM water quality BMP or detention facility is proposed, hydrologic model exports/hydrographs must be submitted for the for the 2, 10, 25, & 100-year storm frequencies 3. Sizing calculations for any SWM water quality BMP or detention facility 4. A stormwater maintenance manual for any proposed SWM water quality BMP or detention facility, including: a. Annual maintenance requirements b. Annual inspection requirements by a licensed PE; noting that all inspection reports/logs need to be submitted to the Engineering Department by March 1st each following year, identifying what on-going maintenance has occurred and what remedial repairs are needed c. Signed Property Owner Agreement: including the current property owner's contact information and signature; it must be noted that all stormwater BMP maintenance requirements are linked to the property for perpetuity and transfer to any new ownership	Yes				
C	An approved 'Sewer Ability-to-Serve Letter' from the Engineering Department: i. Applicant to submit proposed sewer flow calculations per Maine's Subsurface Wastewater Disposal Rules, Chapter 241, Section 4 (Tables 4A & 4C	N/A		No new buildings/sewer conveyance proposed		
D	A Performance Guarantee Cost Estimate utilizing Planning's templat	YES				
E	For any Site Location of Development (SLODA) project, the applicant's submittal must mimic a formal submittal to DEP. Submit must abide to DEP's SLODA application and include DEP's SLODA Submittal Checklist (Form D)	YES				
F	25-year hydraulic calculations for all storm conveyance infrastructure (pipes, culverts, drainage ditches); starting tailwater conditions/documentation must be clearly identifie	YES				
K	Public sewer pump station sizing calculations and maintenance plai	N/A	No pump stations proposed	No pump stations proposed		
M	Grease trap sizing calculations	N/A	No grease traps proposed	No grease traps proposed		
N	Homeowner Association (HOA) agreement for any private road serving two (2) lots or more	N/A	No HOA	No HOA		
O	Summary list & copy of any required DOT/DEP/USACE permits & approvals	YES

Deed

Excepting and reserving, however, from the last parcel described a small triangular parcel of land in the rear of the premises of Charles E. Roberts which triangular lot has a base of about 50 feet in length which is an extension of the northwesterly boundary of said Roberts lot; and has an altitude of about 100 feet in length which is the northeasterly side thereof and is located in the center of a ditch long supposed to be the rear line of the Roberts lot; and which has a hypotenuse which is coincident with the rear line of said Roberts lot and is the southerly side of said triangule, being the same premises conveyed by Blanche T. Beuscher and Olga M. DeHaven to the said Kenneth A. Littlefield and Barbara A. Littlefield, by their deed of mortgage dated on the twentieth (20) day of February 1958 and recorded in York Registry of Deeds, Book 1354, Page 447, but described under the aforementioned reference only as three certain lots or parcels of land, with buildings thereon, and mentioned as being the same premises conveyed on February 20th, 1958, by Kenneth A. and Barbara A. Littlefield to Blance T. Beuscher and Olga M. DeHaven, by Warranty Deed, Recorded Book 1362, Page 112; and that such entry was made and possession taken as aforesaid, for the avowed purpose of foreclosing said mortgage, because of a breach of the condition thereof.

Raymond E. Mealey

Madeline C. Mealey

STATE OF MAINE

COUNTY OF YORK, SS March 24, 1962 Signed and sworn to by the said Raymond E. Mealey and Madeline C. Mealey,

Before me. Maurice L. Shibles Notary Public (L.S.)
My Commission Expires Sept. 2, 1966

Recorded according to the original received April 6, 1962 at 11h. 58m. A. M. EL

KNOW ALL MEN BY THESE PRESENTS, THAT, COUVENT de la PRESENTATION de MARIE, a corporation organized and existing under the laws of the State of Maine and located at Biddeford, in the County of York and said State of Maine, in consideration of One Hundred Fifty Thousand Dollars ($150,000.00) paid by THE FRANCISCAN FATHERS OF MAINE, a corporation duly organized by law and having an established place of business at 605 Pool Road, in said Biddeford, the receipt whereof it does hereby acknowledge, does hereby give, grant, bargain, sell and convey, unto the said The Franciscan Fathers of Maine, its successors or assigns, forever, the following described property: I.R.S. One Hundred and Sixty Five Dollars

Parcel 1

A certain lot or parcel of land, with the buildings thereon, situated in

said Biddeford and bounded and described as follows:

BEGINNING at a point on the Northerly side of the Hill's Beach Road, so-called, in said Biddeford, said point being the Westerly corner of the land herein conveyed and being in the Southerly line of land formerly of one Finney and now of Couvent de la Presentation de Marie, and being marked by an iron stake driven into the ground; thence South eighty-two degrees eight minutes East (S 82° 08' E) two hundred fourteen and forty-six one-hundredths (214.46) feet by said Hill's Beach Road to an iron stake driven into the ground; thence North eighty-one degrees forty-two minutes East (N 81° 42' E) five hundred forty-five and five one-hundredths (545.05) feet by said Hill's Beach Road to an iron stake driven into the ground; thence South fifty degrees thirty-five minutes East (S 50° 35' E) two hundred thirty-eight and forty-seven one-hundredths (238.47) feet by said Hill's Beach Road to an iron stake driven into the ground and other land of this Grantor; thence North eighty-six degrees twenty-seven minutes East (N 86° 27' E) sixteen and ninety-one one-hundredths (16.91) feet by said other land of this Grantor to a drill hole into the ledge and land now or formerly of John J. Traynor; thence North three degrees thirty-three minutes West (N 3° 33' W) one hundred thirty-three and five tenths (133.5) feet by said land of John J. Traynor, land now or formerly of one Michael Reddy and a reserved street as shown on a plan of land of William A. Chadbourne, drawn by Z. G. Staples, July 14, 1874, and recorded in York County Registry of Deeds in Plan Book 2, Page 40, and by the stone wall to an iron stake driven into the ground at the Southwesterly corner of land now or formerly of William Libby; thence North twenty-two degrees forty-one minutes West (N 22° 41' W) one hundred twenty-eight and one-half (128½) feet by said land of William Libby, other land of this Grantor and by the stone wall to an angle in said stone wall; thence North fifty-five degrees fifty-seven minutes East (N 55° 57' E) three hundred ninety-three and nineteen one-hundredths (393.19) feet by said other land of this Grantor, by a reserved street as shown on said plan, and land now or formerly of Thomas Gallagher and by the fence and wall to an iron stake driven into the ground at the top of the bank; thence this same course to Saco River; thence Northerly, Northwesterly and Westerly by said River to an iron stake driven into the ground at a point of ledge and to said other land of this Grantor; thence South forty-one degrees East (S 41° E) three hundred thirty-nine and seven tenths (339.7) feet to an iron stake driven into the ground at the stone wall; thence South sixty-three degrees West (S 63° W) fifty-six and three tenths (56.3)feet by said stone wall to an iron stake driven into the ground; thence South sixty-nine degrees fifteen minutes West (S 69° 15' W) one hundred sixteen and one-half (116½) feet by said

The last ten courses described being bounded by said other land of this Grantor. The above courses refer to the 1931 magnetic meridian.

Parcel 2

Also another certain lot of land, bounded and described as follows:

BEGINNING at an iron stake driven into the ground at the Southerly corner of the above described parcel and on the Northerly side of said Hill's Beach Road; thence North eighty-six degrees twenty-seven minutes East (N 86° 27' E) sixteen and ninety-one one-hundredths (16.91) feet by said above described parcel to a drill hole in the ledge and land now or formerly of John J. Traynor; thence South three degrees thirty-three minutes East (S 3° 33' E) fifteen and seventy-five one-hundredths (15.75) feet by said land of Traynor to said Hill's Beach Road; thence North fifty degrees thirty-five minutes West (N 50° 35' W) twenty-three and eleven one-hundredths (23.11) feet by said road to the point of beginning.

Parcel 3

Also another certain lot or parcel of land, situated at Hill's Beach, so-called, in said Biddeford, and adjoining the first above described parcel, bounded and described as follows:

BEGINNING at the Northwest corner of Lot #18, on a plan of land made by Z. G. Staples for William A. Chadbourne, dated July 14, A. D. 1874, at land of the late Selucus Adams and S. S. Mitchell; thence running Southerly one hundred (100) feet to Lot #17 on said plan; thence Westerly by last named lot fifty (50) feet; thence North forty-eight degrees West (N 48° W) forty-eight (48) feet by land of said Adams; thence North fifty-one and one-half degrees East (N 51½° E) one hundred six (106) feet by land of said Adams and Mitchell to the place of

48
pg 146

Book 1484

beginning, and containing about five thousand four hundred and twenty-four (5,424) square feet, being the same parcel of land as described in deed of James B. Marr and others to Caroline P. Adams, dated April 1, 1891 and recorded in York County Registry of Deeds in Book 443, Page 88.

The above described premises were conveyed to the within Grantor by Les Soeurs de la Presentation de Marie by deed of Warranty, dated September 30, 1932 and recorded in York County Registry of Deeds in Book 834, Page 67.

Parcel 4

Also another certain lot or parcel of land, together with the buildings thereon, situated in said Biddeford and known as the old Ralph Tristram Jordan place situated on the northeasterly side of the Pool Road, so-called, bounded on the southwesterly side by said Pool Road; southeasterly by the road to the beach and land formerly of Mrs. Horace Woodman; on the northeasterly side by the Saco River; and on the northwesterly side by land, now or formerly of J. B. Coolbroth.

For more particular description of the premises hereinabove last described, reference is made to decree of Supreme Judicial Court of Maine in the matter of Hanford E. Finney against claiments known and unknown dated October 3, 1919, and recorded in said York County Registry of Deeds, Book 671, Page 374.

All fixtures and articles of whatever nature permanently attached to said buildings are included in this conveyance.

TO HAVE AND TO HOLD the aforegranted and bargained premises, with all privileges and appurtenances thereof to the said The Franciscan Fathers of Maine, its successors or assigns, to its and their use and behoof forever.

AND it does COVENANT with the said Grantee, its successors or assigns, that it is lawfully seized in fee of the premises; that they are free of all encumbrances; that it has good right to sell and convey the same to the said Grantee to hold as aforesaid; and that it shall and will Warrant and Defend the same to the said Grantee, its successors or assigns forever, against the lawful claims and demands of all persons.

IN WITNESS WHEREOF, the said Couvent de la Presentation de Marie has caused this instrument to be executed and its corporate seal affixed thereto by - - its Treasurer, thereunto duly authorized, this eighteenth day of April, in the year of our Lord one thousand nine hundred and sixty-two.

Signed, Sealed and Delivered
in Presence of

Harold D. Carroll

To Whom It May Concern:

The University of New England plans to construct a research pier facility, along with an associated access road, on its Biddeford Campus. This new facility will have an estimated total project cost of $5,500,000. The University of New England has received a federal appropriation for $3,500,000 for this project, a and another $1,000,000 has already been received in private donations. The remainder of the project will be financed by the university.

Sincerely,

Alan Thibeault
Vice President for University Operations

B:\Working\UNIVERSITY OF NEW ENGLAND\2203703 UNE Marine Science Center Pier\06_REGULATORY\Stormwater\UNE MSC Stormwater Report Rev. 06-05-2025.docx

1. Introduction

The University of New England (UNE) campus is located along the Saco River in Biddeford, ME. The Marine Science Center is located on the waterfront at the easterly end of campus (Fig. 1) approximately opposite Camp Ellis in Saco. To support MSC research activities, UNE proposes to construct a pier from the shore adjacent to the MSC into the Saco River to provide an all-tide access facility for small and shallow draft vessels (skiffs, landing craft, up to approximately 3-foot draft), with tidally-restricted access for larger vessels.

Fig. 1. Aerial Photo of University of New England Marine Science Center Waterfront

In 2008-2010, UNE worked with Baker Design Consultants (BDC) to undertake a concept planning study for the proposed pier. In this study, nine alternative designs were developed for water access facilities along the UNE waterfront consisting of various configurations of piers, boat ramps, and upland access and support facilities. The alternatives were evaluated on a range of criteria including technical criteria, functionality, constructability, cost and others to identify a preferred facility location. The nine alternatives evaluated through this study are shown in Fig. 2. At the conclusion of this study, Site 7 (directly in front of the Marine Science Center building) was identified as the preferred facility location (Site) to develop a new pier facility that would consist of a pile-supported pier extending from shore out into the Saco River.

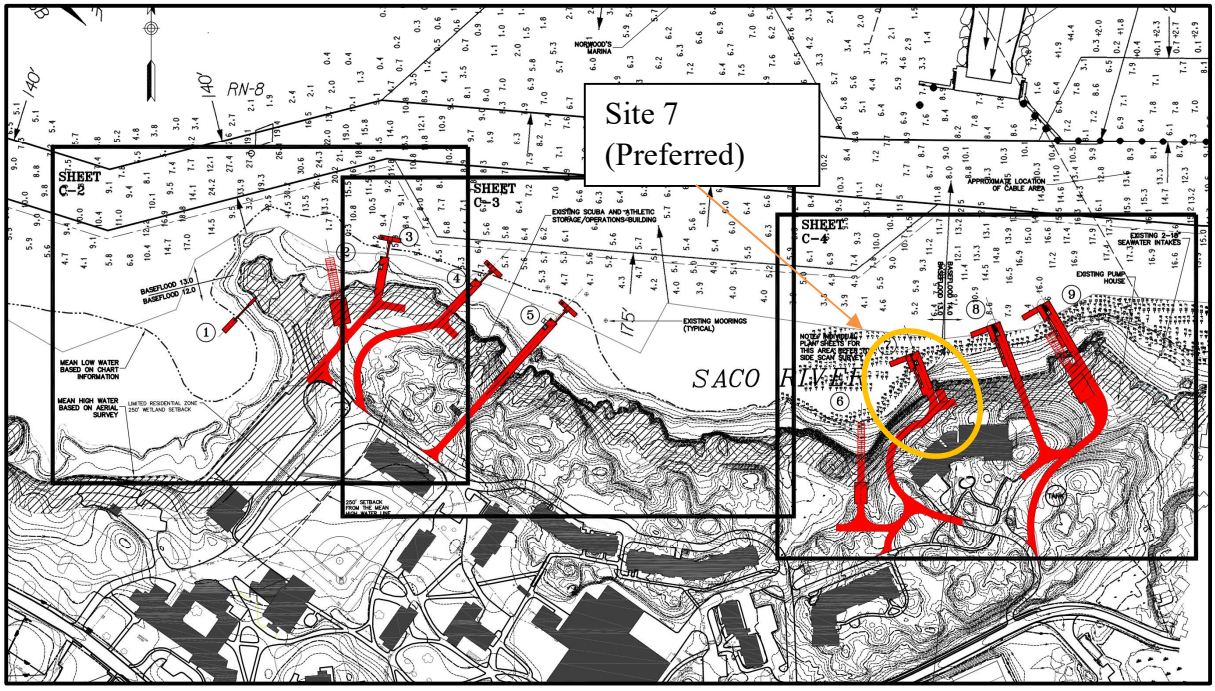

Fig. 2. Pier Location Alternatives from BDC Feasibility Study

In 2015-2016, UNE worked with BDC to undertake further design studies for a pier at the preferred location to investigate structure dimensions, orientation, rough order of magnitude costs, and impacts to coastal resources and features. As part of this evaluation, a preliminary geotechnical investigation was undertaken by GZA Geoenvironmental that included one water boring, two probes, and four test pits. At the conclusion of this phase of work, three alternative layouts were developed and reviewed with staff from UNE, the City of Biddeford, and the Saco River Corridor Commission and memorialized in a memo from BDC dated March 22, 2016.

In February 2022, UNE resumed design of the new proposed pier working with GEI Consultants to confirm conceptual layout for the pier and access road, and undertake design through 100% design and bid documents, as well as coordinate with UNE's consultant Site Design Associates for permitting of the proposed facility.

The proposed facility includes the following:

1. A pile supported pier structure extending from shore into the Saco River. The proposed pier includes an approximately 130-foot-long approach section extending from shore and an 80-foot long pier head section oriented roughly parallel to the direction of flow in the river. The pier consists of a concrete superstructure on steel pipe piles, with timber fender piles for vessel berthing and floating docks, and a pile supported gangway lifting beam to allow the gangway ramp to be temporarily removed from the water.

2. A floating dock system consisting of one 8-foot by 24-foot float, one 8-foot by 26-foot 10-inch float, and one 12-foot by 30-foot gangway landing float to provide all-tide vessel access for UNE's vessels on the west side of the pier, and a single 6-foot by 20-foot floating dock to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.
3. An 80-foot by 5-foot gangway to provide ADA compliant access to the float system.
4. An upland access road connecting the existing road at the MSC to the proposed pier, including associated site grading, drainage, and stormwater management features.

2. Methodology

Technical Release No. 22 (TR20) was used to calculate the existing and developed runoff from the project area. Hydrographs have been generated for the 2, 10, and 25-year frequency design storm events utilizing the NRCS Type III storm distribution and the 24-hour regional data from York County's rainfall data as required by MaineDEP. The rainfall amounts for York County are listed below:

Table 1-Existing 24 Hour Rainfall Frequency			
Rainfall amounts in Inches			
Design Storm	***2-Year***	***10-Year***	***25-Year***
	3.21	4.83	6.11

The following guidelines were utilized in the design of the Site's stormwater measures and BMPs (MaineDEP Stormwater Guidelines, Chapter 500):

1. Waiver of the flooding standard. A project is eligible for a waiver from the flooding standard if it discharges to a coastal wetland, a great pond, or a major river segment. A waiver is available for a project in the watershed of a coastal wetland, a great pond, or a major river segment provide the applicant demonstrates that the project convey stormwater exclusively in sheet flow, in a manmade open channel or in a piped system directly into one of these resources.
2. The redistribution of stormwater discharges standard will be met by discharging to a level spreader. The peak stormwater flow rate to a level spreader due to runoff from a 10-year, 24-hours storm must be less that 0.25 cubic feet per second (0.25 cfs) per foot length of level spreader.
3. Project will meet the erosion and sedimentation control standards found in Maine Department of Environmental Protection Guidelines, Chapter 500, Appendix A.

3. Pre-Development Conditions

1. Land Use

   Presently, the Site is the location of the University of New England Girard Marine Science Center. However, the existing buildings and parking lots exist outside of the limits of this project. Runoff generated from the buildings and parking lots in conveyed via underground pipes to the south, away from the Saco River.

   The proposed project limits currently consists of predominantly wooded areas. The southeast corner of the Site contains gravel path.

2. Topography

   The Site is mainly comprised of steeply sloped wooded areas with slopes near 20% for most of the Site. The Site mostly slopes to the north towards the Saco River/Atlantic Ocean. Per the NRCS WebSoil Survey, the Site is comprised almost completely of sandy, stony soil. These sandy soils are rated as Hydrologic Group D. A copy of the Web Soil Survey can be found in the Appendices.

3. Existing Drainage Area

   Presently, the runoff from the Site flows via overland flow to three different points of analysis, hereafter known as DP1, DP2 and DP3, with associated drainage areas 1S, 2S and 3S, respectively. The predevelopment drainage areas are described below:

   A map entitled Pre-Development Drainage Plan is included in the Drawings section of this report. Additionally, the HydroCAD model and calculations can also be found in the Appendix.

   Predevelopment Area 1S is the smallest of the existing drainage areas and is ±0.460 acres which consists of wooded areas. Runoff from Predevelopment Area 1S flows overland from the rear of the Girard Marine Science Center to the northeast and directly into the Saco River/Atlantic Ocean at DP1.

   Predevelopment Area 2S is ±0.637 acres and can be found in the middle of the Site. Predevelopment Area 2S consists of all wooded areas. Runoff from Predevelopment Area 2S flows via overland flow from a ledge in the middle of the Site to the north to the Saco River/Atlantic Ocean at DP2.

Predevelopment Area 3S is ±1.461 acres and comprises the eastern most portion of the Site. Predevelopment Areas 3S consists mostly of wooded areas and contains a gravel path leading to the lower lying wetlands and sand beaches along the Saco River/Atlantic Ocean. Runoff from Predevelopment Area 3S from the paved walkway at the Girard Marine Science Center to the northeast to the Saco River/Atlantic Ocean at DP3.

Tables 2A, 2B and 2C below list the total runoff for each Predevelopment Area:

Table 2A-Predevelopment Area 1S Runoff
Rainfall amounts in cubic feet per second

Pre-Development Total	***2-Year***	***10-Year***	***25-Year***	***100-Year***
Peak Runoff Rate (cfs)	0.71	1.44	2.07	3.31

Table 2B-Predevelopment Area 2S Runoff
Rainfall amounts in cubic feet per second

Pre-Development Total	***2-Year***	***10-Year***	***25-Year***	***100-Year***
Peak Runoff Rate (cfs)	0.74	1.51	2.17	3.50

Table 2C-Predevelopment Area 3S Runoff
Rainfall amounts in cubic feet per second

Pre-Development Total	***2-Year***	***10-Year***	***25-Year***	***100-Year***
Peak Runoff Rate (cfs)	2.39	4.58	6.44	10.05

4. Post Development Conditions

1. Land Use

When fully developed, the Site will contain the following improvements:

a. A pile supported pier structure extending from shore into the Saco River. The proposed pier includes an approximately 130-foot-long approach section extending from shore and an 80-foot long pier head section oriented roughly parallel to the direction of flow in the river. The pier consists of a concrete superstructure on steel pipe piles, with timber fender piles for vessel berthing and floating docks, and a pile supported gangway lifting beam to allow the gangway ramp to be temporarily removed from the water.
b. A floating dock system consisting of one 8-foot by 24-foot float, one 8-foot by 26-foot 10-inch float, and one 12-foot by 30-foot gangway landing float to provide all-tide vessel access for UNE's vessels on the west side of the pier, and a single 6-foot by 20-foot floating dock to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.
c. An 80-foot by 5-foot gangway to provide ADA compliant access to the float system.
d. An upland superelevated access road connecting the existing road at the MSC to the proposed pier, including associated site grading, drainage, and stormwater management features.

These improvements will result in a total increase in impervious area of 0.249 acres. The increase in impervious area will be managed by the two bioretention filter cells to the north of the Girard Marine Science Center. Runoff will be conveyed to the bioretention filter cells via proposed vegetated swales along the low side of the superelevated access road.

The bioretention filter cells will slowly release captured stormwater via underground pipe into the Saco River/Atlantic Ocean.

2. Drainage Areas

The map entitled Post-Development Drainage Plan delineating all developed drainage areas can be found in the Drawings section of this report. For analysis, the Site was broken up into 5 different drainage areas hereafter known as 1S, 2S, 3S, 4S, and 5S.

Post Development Area 1S contains the area that conveys runoff to the western Bioretention Filter Cell B. This area contains impervious areas from the access road and the proposed vegetated areas behind the Girard Marine Science Center. Runoff is conveyed to the Bioretention Filter Cell B via vegetated swale. Runoff captured by the bioretention filter cell will be treated and slowly released via underground pipe to the outfall under the proposed pier and into the Saco River/Atlantic Ocean near DP1.

Post Development Area 2S contains the areas to the northwest of the Site that conveys runoff via over land flow from the Girard Marine Science Center to DP1. This area contains small impervious areas as it contains the northern shoulder of the access road and the transition from access road to pier. Runoff from this area will not be managed for water quality or peak rate reduction.

Post Development Area 3S contains the area that conveys runoff to the eastern Bioretention Filter Cell A. This area contains impervious area from the access road and the proposed vegetated areas behind and to the east of the Girard Marine Science Center. Runoff is conveyed to the Bioretention Filter Cell A via vegetated swale. Runoff captured by the bioretention filter cell will be treated and slowly released via underground pipe to the outfall to the north where it will run through a level spreader to further reduce peak flow rate. Runoff will leave the level spreader and reach the Saco River/Atlantic Ocean via overland flow near DP2.

Post Development Area 4S contains the area to the northeast of the Site that conveys runoff via over land flow from the Girard Marine Science Center to DP2. This area contains small impervious areas as it contains the northern shoulder of the access road and the level spreader. Runoff from this area will not be managed for water quality or peak rate reduction.

Post Development Drainage Area 5S contains the area to the eastern portion of the Site. This this area contains the southernmost portion of the proposed access road and the existing gravel path. Runoff from this area will be conveyed via overland flow to the Saco River/Atlantic Ocean at DP3.

5. Stormwater Management

1. Stormwater Quantity

The bioretention filter cells are proposed to reduce the peak runoff rate of the 2, 10, and 25-year storms to treat stormwater runoff from the Site in accordance with DEP standards. Despite this, efforts were made to minimize the peak runoff rate from the Site. The tables below summarize the peak rate of runoff for the Site:

TABLE No. 3A
Managed Total Peak Discharge Summary of the Proposed Conditions to Discharge Point DP1

Storm Event	2-Year		10-Year		25-Year		100-Year	
	Existing	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**
Peak Runoff Rate (cfs)	0.71	1.02	1.44	1.85	2.07	2.54	3.31	3.88

TABLE No. 3B
Managed Total Peak Discharge Summary of the Proposed Conditions to Discharge Point DP2

Storm Event	2-Year		10-Year		25-Year		100-Year	
	Existing	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**
Peak Runoff Rate (cfs)	0.74	1.24	1.51	2.31	2.17	3.22	3.50	4.98

TABLE No. 3C
Managed Total Peak Discharge Summary of the Proposed Conditions to Discharge Point DP3

Storm Event	2-Year		10-Year		25-Year		100-Year	
	Existing	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**	**Existing**	**Proposed**
Peak Runoff Rate (cfs)	2.39	2.23	4.58	4.26	6.44	5.99	10.05	9.35

The tables above show a relatively minor increase in the peak rate of stormwater runoff subsequent to development. The northern most outfall will discharge to a level spreader which will create sheet flow into the Saco River/Atlantic Ocean. The western most outfall will outlet through the pier concrete abutment. Because the area downgradient of the outlets is stable rock, there will be no impacts due to the minor

increase in runoff. Stormwater runoff from each of the subcatchments adjacent to the river is not considered a point discharge in either the existing or proposed conditions, and is dispersed over the entire frontage along the river.

Since this development outlets directly to a major river segment/ocean, the flooding standard is typically waived by DEP (Chapter 500-Section F.3.a). The City also typically waives the need to provide detention of stormwater runoff from this parcel of UNE's property due to the tidal nature of the receiving waters. A waiver has been requested.

2. Stormwater Quality

The project proposes to treat 76% of impervious development and 72% of all new development. As discussed in the preapplication meeting, the proposed development will be treated as a linear portion of the project. For a linear project, the minimum treatment level required is 70% for impervious development and 50% of all new development. Water Quality treatment level are found in the tables below.

TABLE No. 4

Water Quality Treatment Level

Subcatchment Area	Impervious Area (SF)	Landscaped Area (SF)	Developed Area (SF)	Filter Area Required (SF)	Filter Area Provided (SF)	Water Quality Volume Required (CF)	Water Quality Volume Provided (CF)	Sediment Forebay Volume Required (CF)	Sediment Forebay Volume Provided (CF)	BMP
1S	4,917	4,915	9,832	344	854	574	200			Bioretention Filter
2S	1,238	10,250	11,488	267	-	445	-			-
3S	4,476	8,889	13,365	402	565	669	380	144	115	Bioretention Filter
4S	295	17,234	17,529	359	-	599	-			-
5S	6,273	52,906	59,179	1,372	-	2,286	-			-
Total Treated	**13,071**	**13,804**	**80,203**	930	-	1,549				
Total Developed Impervious Area	**17,199**									
Total Developed Area	**111,393**									
Percent Developed Area Treated	**72%**									
Percent Developed Impervious Area Treated	**76%**									

3. Erosion and Sedimentation Control

BMP's such as stabilized construction entrance, silt fence and/or filter berms of erosion control mix, riprap pipe inlet and outlet protection, turf reinforcement matting, mulch and permanent seeding will be used to prevent erosion and downstream migration of sediment during construction. The locations of temporary and permanent erosion control measures are erosion and sedimentation control notes

and details are shown on the design drawing set.

4. Inspection and Maintenance

   The University of New England will be responsible for maintaining the stormwater facilities for the project. An Inspection and Maintenance Plan is included in the Appendix. The plan includes a draft of the Stormwater Drainage System Maintenance Agreement, to be finalized and recorded as a condition of approval.

6. Conclusions

The stormwater management for this project included a variety of BMPs to control both the quantity and quality of stormwater runoff. The HydroCAD calculations show a minimal increase in the stormwater runoff from the proposed Site however the Stormwater Quantity requirement can be waved since this development discharges directly to a major river segment/ocean, the flooding standards can be waived (Chapter 500-Section F.3.a).

Stormwater treatment BMPs have been designed to treat stormwater runoff from more than 70% of the developed impervious area with additional treatment credit from the implementation of Low Impact Development Measures. Based on the information provided, no adverse impacts to downstream receiving bodies are anticipated.

NRCS Web Soil Survey Report

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for York County, Maine

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

York County, Maine

Ba—Beaches, sand

Map Unit Setting

National map unit symbol: 2y080
Elevation: 0 to 20 feet
Mean annual precipitation: 36 to 71 inches
Mean annual air temperature: 39 to 55 degrees F
Frost-free period: 145 to 240 days
Farmland classification: Not prime farmland

Map Unit Composition

Beaches, sandy surface: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Beaches, Sandy Surface

Setting

Landform: Back-barrier beaches, barrier beaches, beaches, shores
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Riser
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Beach sand

Typical profile

C1 - 0 to 10 inches: sand

Properties and qualities

Slope: 0 to 8 percent
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to very high (1.42 to 99.90 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: Very frequent
Maximum salinity: Moderately saline to strongly saline (8.0 to 16.0 mmhos/cm)
Available water supply, 0 to 60 inches: Very low (about 0.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydric soil rating: Unranked

LyC—Lyman-Rock outcrop complex, 8 to 15 percent slopes

Map Unit Setting

National map unit symbol: 2trqj
Elevation: 0 to 790 feet
Mean annual precipitation: 36 to 65 inches
Mean annual air temperature: 36 to 52 degrees F

Frost-free period: 60 to 160 days
Farmland classification: Not prime farmland

Map Unit Composition

Lyman, very stony, and similar soils: 62 percent
Rock outcrop: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lyman, Very Stony

Setting

Landform: Hills, mountains
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Mountaintop, mountainbase, side slope, crest
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy supraglacial till derived from granite and gneiss and/or loamy supraglacial till derived from phyllite and/or loamy supraglacial till derived from mica schist

Typical profile

Oe - 0 to 1 inches: moderately decomposed plant material
A - 1 to 3 inches: loam
E - 3 to 5 inches: fine sandy loam
Bhs - 5 to 7 inches: loam
Bs1 - 7 to 11 inches: loam
Bs2 - 11 to 18 inches: channery loam
R - 18 to 28 inches: bedrock

Properties and qualities

Slope: 8 to 15 percent
Surface area covered with cobbles, stones or boulders: 1.5 percent
Depth to restrictive feature: 11 to 24 inches to lithic bedrock
Drainage class: Somewhat excessively drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to high (0.00 to 14.03 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6s
Hydrologic Soil Group: D
Ecological site: F144BY701ME - Shallow Till
Hydric soil rating: No

Description of Rock Outcrop

Setting

Landform: Hills, mountains
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Mountaintop, mountainbase, side slope, crest
Down-slope shape: Convex

Across-slope shape: Convex
Parent material: Igneous and metamorphic rock

Typical profile
R - 0 to 10 inches: bedrock

Properties and qualities
Slope: 8 to 15 percent
Depth to restrictive feature: 0 inches to lithic bedrock
Capacity of the most limiting layer to transmit water (Ksat): Very low to very high (0.00 to 14.17 in/hr)

Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8s
Ecological site: F144BY801ME - Rockland (reserved)
Hydric soil rating: Unranked

LyE—Lyman-Rock outcrop complex, 15 to 80 percent slopes

Map Unit Setting
National map unit symbol: 2trqp
Elevation: 0 to 980 feet
Mean annual precipitation: 36 to 65 inches
Mean annual air temperature: 36 to 52 degrees F
Frost-free period: 60 to 160 days
Farmland classification: Not prime farmland

Map Unit Composition
Lyman, very stony, and similar soils: 60 percent
Rock outcrop: 30 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lyman, Very Stony

Setting
Landform: Hills, mountains
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Mountaintop, mountainflank, side slope, crest
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy supraglacial till derived from granite and gneiss and/or loamy supraglacial till derived from phyllite and/or loamy supraglacial till derived from mica schist

Typical profile
Oe - 0 to 1 inches: moderately decomposed plant material
A - 1 to 3 inches: loam
E - 3 to 5 inches: fine sandy loam
Bhs - 5 to 7 inches: loam

Bs1 - 7 to 11 inches: loam
Bs2 - 11 to 18 inches: channery loam
R - 18 to 28 inches: bedrock

Properties and qualities

Slope: 15 to 80 percent
Surface area covered with cobbles, stones or boulders: 1.5 percent
Depth to restrictive feature: 11 to 24 inches to lithic bedrock
Drainage class: Somewhat excessively drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to high (0.00 to 14.03 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: D
Ecological site: F144BY701ME - Shallow Till
Hydric soil rating: No

Description of Rock Outcrop

Setting

Landform: Hills, mountains
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Mountaintop, mountainflank, side slope, crest, free face
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Igneous and metamorphic rock

Typical profile

R - 0 to 10 inches: bedrock

Properties and qualities

Slope: 15 to 80 percent
Depth to restrictive feature: 0 inches to lithic bedrock
Capacity of the most limiting layer to transmit water (Ksat): Very low to very high (0.00 to 14.17 in/hr)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8s
Ecological site: F144BY801ME - Rockland (reserved)
Hydric soil rating: Unranked

UH—Urban land-Hooksan complex, 0 to 8 percent slopes

Map Unit Setting

National map unit symbol: 2x1l1
Elevation: 0 to 50 feet
Mean annual precipitation: 36 to 71 inches
Mean annual air temperature: 39 to 55 degrees F
Frost-free period: 140 to 240 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land, coastal: 50 percent
Hooksan and similar soils: 30 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land, Coastal

Setting

Landform: Dunes
Down-slope shape: Linear
Across-slope shape: Linear

Typical profile

M - 0 to 10 inches: cemented material

Properties and qualities

Slope: 0 to 8 percent
Depth to restrictive feature: 0 inches to manufactured layer
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Frequency of flooding: Rare
Available water supply, 0 to 60 inches: Very low (about 0.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydrologic Soil Group: D
Hydric soil rating: Unranked

Description of Hooksan

Setting

Landform: Dunes
Landform position (two-dimensional): Summit, shoulder, backslope, footslope
Landform position (three-dimensional): Side slope, base slope, crest
Down-slope shape: Convex
Across-slope shape: Convex, linear
Parent material: Sandy eolian deposits

Typical profile

C1 - 0 to 20 inches: sand
C2 - 20 to 30 inches: sand
C3 - 30 to 64 inches: sand

Properties and qualities

Slope: 0 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Excessively drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Very high (14.17 to 99.90 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 1.9 mmhos/cm)
Available water supply, 0 to 60 inches: Low (about 5.4 inches)

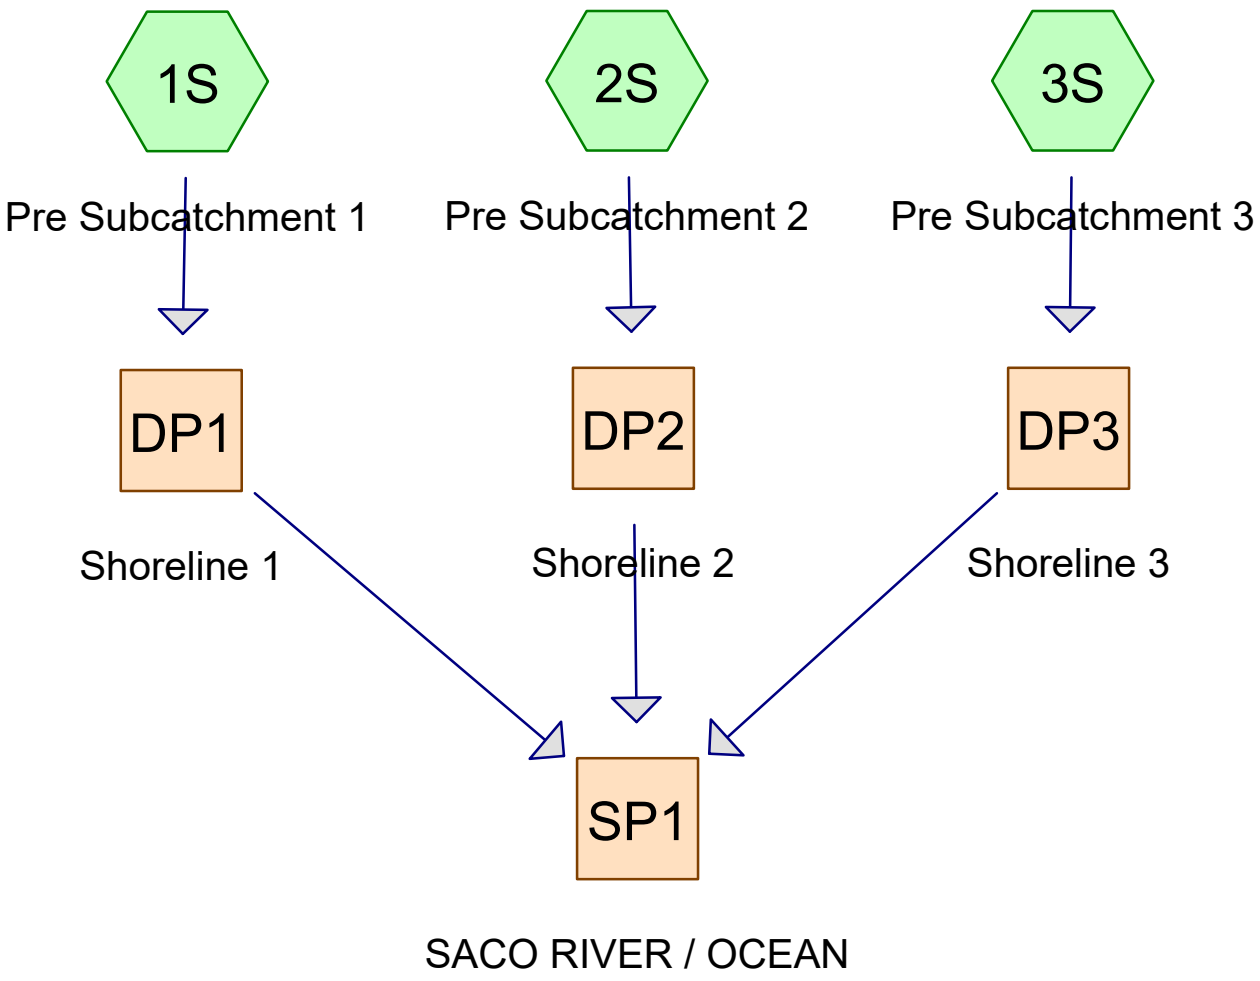
Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: A
Ecological site: R149BY002MA - Coastal Dunes
Hydric soil rating: No

W—Water bodies

Map Unit Composition

Water: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.



Description of Water

Setting

Landform: Hills

Inspection and Maintenance Plan

Owner Responsible for Maintenance

All maintenance plans for stormwater management measures must include the following:

> The name, address, and telephone number of the person or persons responsible for the preventative and corrective maintenance of the stormwater management measure. If the plan identifies a party other than the owner or developer as having responsibility for maintenance, i.e., a public entity or homeowners' association, the plan must include a copy of the other party's written agreement to assume this responsibility. This agreement must include a copy of any ordinance or regulation that requires the owner or developer to dedicate the stormwater management measure and/or its maintenance to the other party.

Information of the Person Responsible for Maintenance:

Name:

Address:

Telephone:

If an entity other than the above listed property owner or the developer will have the responsibility for stormwater pond maintenance, then they will provide a copy of the designated party's written agreement to assume this responsibility.

University of New England
Biddeford, Maine
June 2025

INSPECTION AND MAINTENANCE PLAN OF STORMWATER MANAGEMENT FACILITIES

Stormwater Management Facilities include swales, paved surfaces, manholes and catch basins, drain pipe, riprapped aprons, level spreaders, wooded buffers, and bioretention filter cells. Periodic inspection and maintenance of these site features and devices is necessary to prevent erosion, protect roadways and other paved areas, and remove pollutants from stormwater runoff. Best management practices and stormwater facilities should be inspected as noted below, and after a rainfall event of 1" or more in 24 hours.

University of New England Facilities Department is responsible for the inspections and maintenance of stormwater facilities associated with this project.

SWALES, DITCHES, CURBS AND PAVED AREAS:

Swales, ditches, curbs and paved areas are easily inspected during a site walk or even a ride-by. Since visual inspection is easy, their condition should be assessed during and/or after significant rainfall events such as thunder showers and periods of heavy or extended rainfall and during periods of significant snowmelt. Any damage or unusual condition such as sedimentation of a ditch, erosion, damaged curb or dying vegetation should be recorded, dated and initialed by the inspector when observed. Even if there is no damage, the inspector should make record of these inspections at least twice annually.

Paved areas should be visually inspected monthly during the winter. The inspector should pay particular attention to the build up of sand around catch basin grates and remove accumulations that block the free flow of surface runoff to the catch basins. The date and initials of the inspector should be recorded on the forms provided as well as a notation of any cleanup effort that was made and the approximate volume of sand that was removed.

Open swales and ditches shall be inspected twice per year (in spring and fall) to assure that debris and/or sediments do not reduce the effectiveness of the system. Debris and sediments shall be removed at that time. Any sign of erosion or blockage shall be immediately repaired to assure a vigorous growth of vegetation for the stability of the ditches and slopes proper function. Maintenance shall include, but not be limited to, mowing, trimming and removal of vegetation in the ditches and slopes as required in order to prevent vegetation from blocking or diverting storm flows, replacement of riprap channel lining to prevent scour of the channel invert, removing vegetation and debris from the culverts.

Vegetated ditches should be mowed at least monthly during the growing season. Larger brush or trees must not be allowed to become established in the channel. Any areas where the vegetation fails will be subject to erosion and should be reseeded and mulched immediately.

CATCH BASINS, FIELD INLETS AND DRAIN MANHOLES:

Catch Basins and field inlets are precast concrete structures with sumps and cast iron grates used to collect stormwater and trap heavy sediments. Drain Manholes are similar structures constructed with a channel instead of a sump and a solid cast iron cover instead of a grate. Drain Manholes exist at changes in direction and/or size of storm drain pipe. Catch Basins, field inlets and drain manholes provide access to the closed storm drain system for inspection and maintenance.

Throughout the winter / spring sanding period, inspect catch basins and field inlets monthly and after every significant rainfall event or period of heavy snowmelt. Clean catch basin and field inlet sumps when sediment level is within 12 inches of the outlet pipe invert. At a minimum, remove floating debris and hydrocarbons at the time of the inspection. The removed material must be disposed of in accordance with the Maine Solid Waste Disposal Rules. Confined space entry safety procedures shall be practiced should entry into these structures be required.

Record dates of inspections, observations and maintenance measures implemented (if any) on the forms provided and initial the entry.

DRAIN PIPES:

Drain pipes are road culverts and pipes connecting drain manholes. Inspect drain pipes when inspecting other stormwater maintenance facilities. At least annually make a visual inspection of the pipe. During the daylight you should be able to see light through most pipes as they have been laid to a straight line and grade. In some cases (e.g. pipe runs to a drain manhole, or is blocked) you will need a light to inspect pipes.

Remove any obstructions to flow; remove accumulated sediments and debris at the inlet, at the outlet, and within the conduit; and to repair any erosion damage at the pipe inlet and outlet. Sediment should be removed when its level exceeds 20% of the pipe diameter. This may be accomplished by hydraulic flushing or any mechanical means; however, care should be taken to contain the sediment at the pipe outlet, and not flush the sediments into the stormwater filter or wetland areas.

Riprap aprons where stone is displaced should be replaced and chinked to assure stability. With time, additional riprap may be added. Vegetation growing through riprap should be removed on an annual basis.

Record inspections on the forms provided noting condition of pipe and any maintenance procedures implemented.

LEVEL SPREADERS:

Level Spreaders are shallow basins or ditches constructed at the ends of ditches or pipe outlets to disperse or "spread" concentrated flow thinly over a receiving area. Level Spreaders are constructed along the natural contour of the land to create a level "lip" on the outlet side. The integrity of the level lip is critical to the proper performance of this device.

Inspect the Level Spreader at least once each season and following significant rainfall events (1 inch or more of rain in 12 hours). Record inspections on the forms provided noting your observations and any corrective action taken. Any sign of erosion or blockage shall be immediately repaired to assure a vigorous growth of vegetation and stability of stone berms for the stability of the level spreader for proper function. Minor regrading, releveling of the stone “lip,” and reseeding

of the level lip on an annual basis should be anticipated. Mow level lips at least twice during the growing season. Maintenance may also include removal of sediment buildup especially on the inlet end.

BIORETENTION FILTER CELLS:

A bioretention filter cells is a landscaped depression with an under drained soil bed or soil filter that exfiltrates the stormwater. The depression is designed to temporarily store runoff, which will drain through the soil filter into the underdrains; excess runoff will flow into structures or over earthen spillways.

Soil Filter Inspection: The soil filter should be inspected after every major storm in the first few months to ensure proper function. Thereafter, the filter should be inspected at least once every six months to ensure that it is draining within 48 hours; and that, after storms that fill the system to overflow, it drains in no less than 24 hours. If the filter drains too rapidly, (i.e. prior to 24 hours), then an adjustable orifice shall be installed on the underdrain outlet pipe. The orifice shall be adjusted such that the filter completely drains within 24 to 72 hours.

Underdrain System: The soil filter outlet consists of a layer of planting loam and sand with a stone and perforated pipe underdrain. Outlet inspections shall include flushing of the underdrain through the cleanouts at the end of the pipes. Trash, sediment, and debris shall be removed from the vicinity of the outlet and must be disposed of in accordance with the Maine Solid Waste Disposal Rules.

Soil Filter Replacement: If the filter fails to drain within 72 hours, the surface of the pond shall be rototilled to promote aeration of the filter media and vegetation shall be re-established. If aeration of the surface soil fails to promote filtration of impounded water within 72 hours, then the filter media shall be replaced as necessary. The stone underdrain shall also be replaced at this time, along with the perforated pipe.

Sediment Removal: Sediment and plant debris should be removed from the pretreatment structure at least annually.

Mowing: Filters with grass cover should be mowed no more than 2 times per growing season to maintain grass heights less than 12 inches.

Fertilization: Fertilization of the bioretention filter cells should be avoided unless absolutely necessary to establish vegetation.

Harvesting and Weeding: Harvesting and pruning of excessive growth will need to be done occasionally. Weeding to control unwanted or invasive plants may also be necessary. Add new mulch as necessary for bioretention cells.

Bioretention Filter Cells shall not be used for snow storage area. Vehicular equipment used to maintain or rehabilitate Bioretention Filter Cells should work from the basin perimeter and not enter the basin area, as this will compact the soil surface and reduce the design infiltration rate. Record all maintenance on forms provided.

SEDIMENT DISPOSAL:

Any sediment or debris removed during maintenance of the stormwater system must be disposed of in accordance with the Maine Solid Waste Disposal Rules.

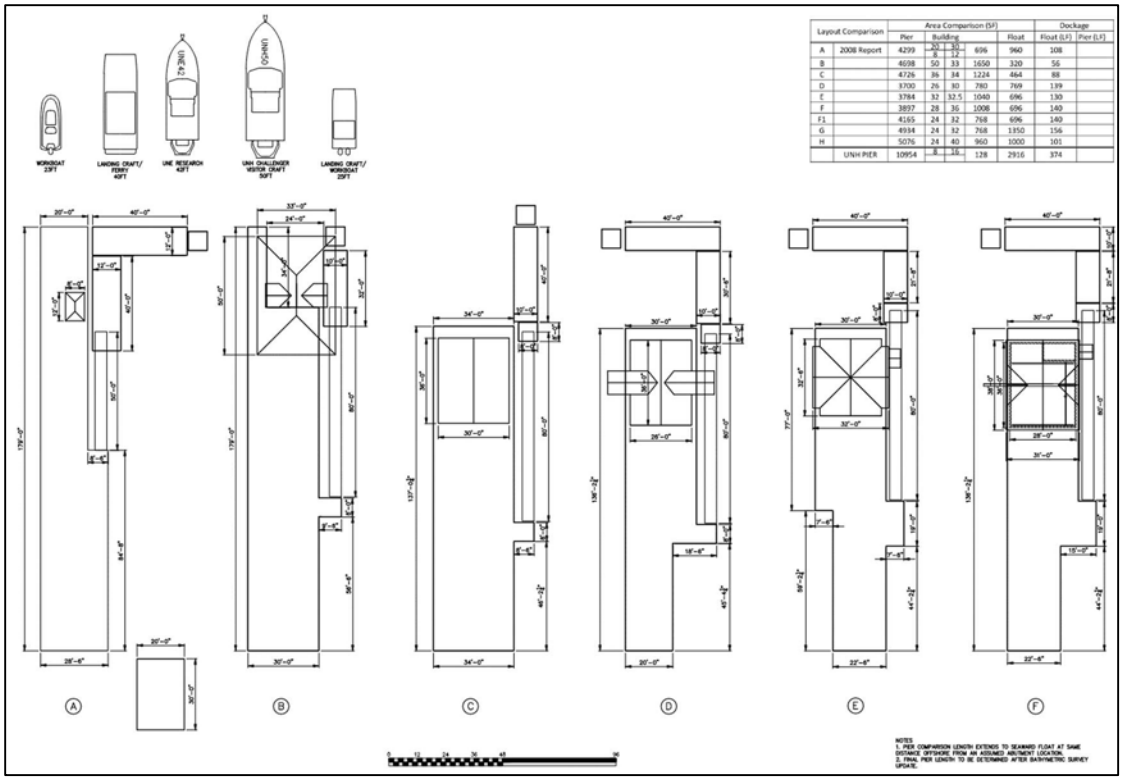
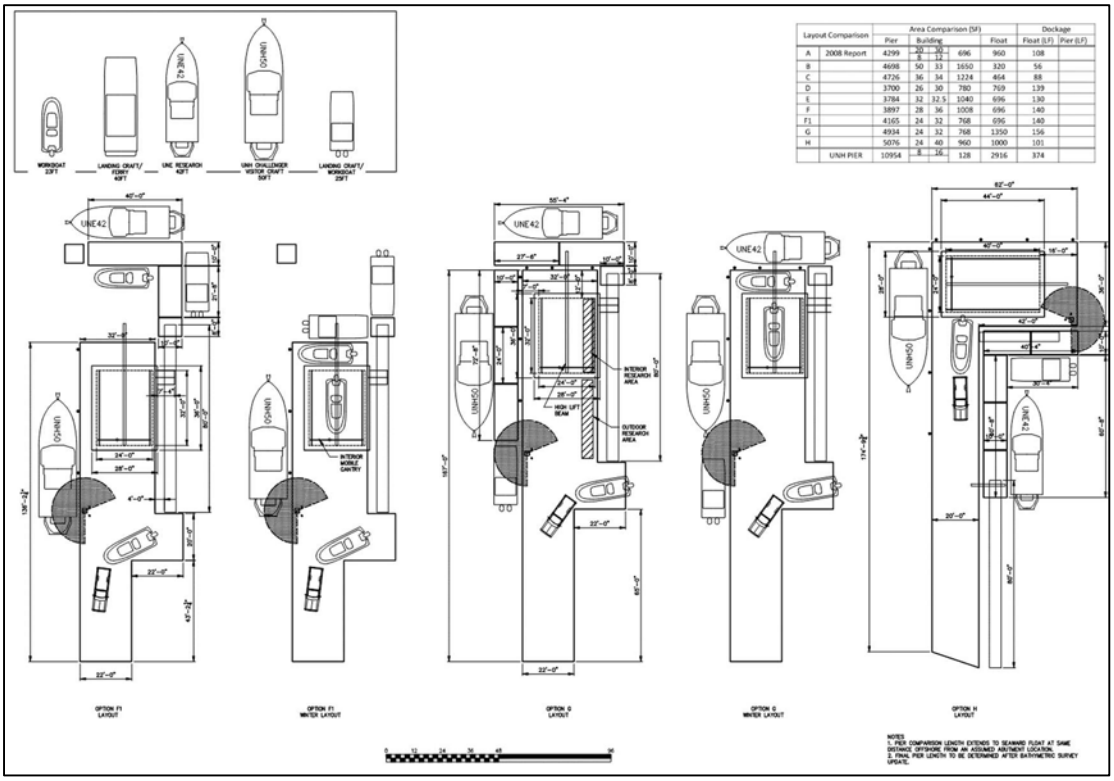
Alternatives Analysis
and Memo

Alternatives Analysis

The Plans provided in attachments 5 and 6 detail the preferred alternative. This design was arrived at after extensive study of alternative locations and layouts for the pier over multiple years time. Alternatives considered in developing the proposed project are briefly described below.

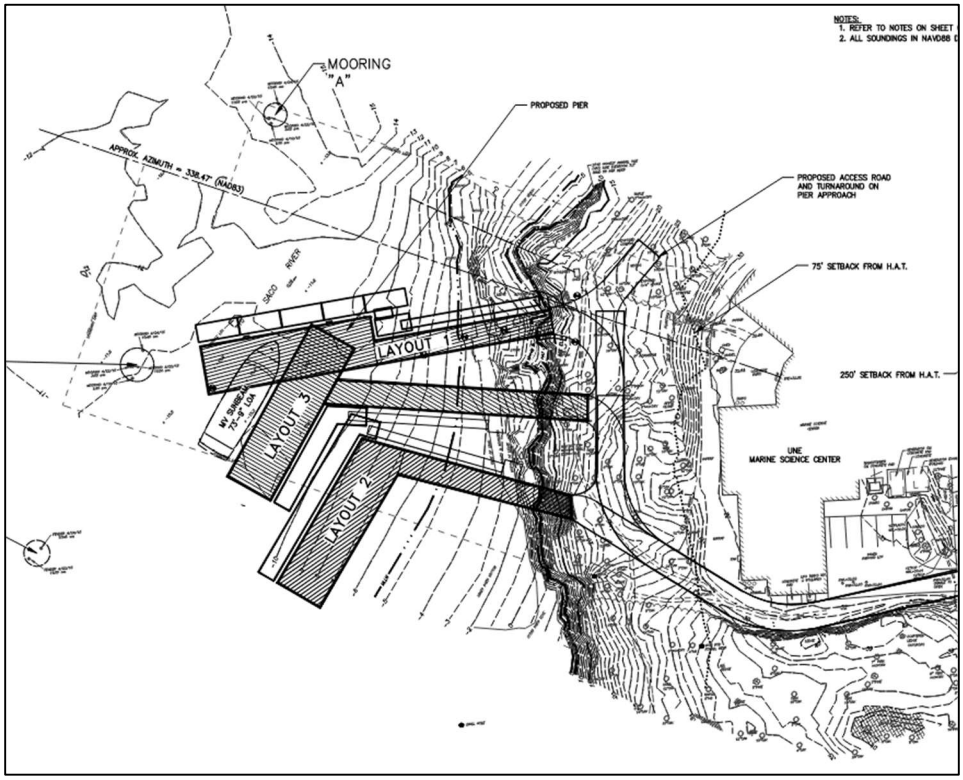


2008-2010 Pier Feasibility Study



In 2008-2010, UNE completed a concept planning study for the proposed pier. In this study, nine alternative designs were developed for water access facilities along the UNE waterfront consisting of various configurations of piers, boat ramps, and upland access and support facilities. The alternatives were evaluated on a range of criteria including technical criteria, functionality, constructability, regulatory impacts, cost of construction, and others to identify a preferred facility location. The nine alternatives evaluated through this study are shown in the figure below. At the conclusion of this study, Site 7 (directly in front of the Marine Science Center building) was identified as the preferred facility location to develop a new pier facility that would consist of a pile-supported pier extending from shore out into the Saco River. This location is optimal for access to and from the MSC facility and on the water, and allows for all-tide berthing with a smaller structure and less impact than several adjacent alternatives that were considered. At the conclusion of this study it was determined that Site 7 was the preferred alternative to move forward with further planning and design.

2015-2016 Pier Layout Study



After completion of the pier feasibility study described above, UNE undertook additional effort to study alternative pier layouts that would address the functional needs of the facility as well as the site exposure, berthing conditions, access requirements, and associated site impacts. During this study, numerous alternative pier layouts were considered which are depicted in the two figures that follow.

Further alternative development was completed in 2016 to address a realignment of the pier head parallel to the predominant direction of flow in the River for improved berth functionality. These alternatives considered input of the Biddeford Harbormaster and his knowledge of boating and

conditions on the Saco River after review of earlier layouts during a meeting in early 2016. The figure below depicts three alternatives considered during the study.

2023 Layout Refinement

During design refinement undertaken in 2023, the preferred alternative was identified as a combination of the pier approach from Layout 1, and the pier head from Layout 3, of the 2016 layout study. The Layout 1 pier approach represents the least impactful and most feasible option for upland site access. The Layout 3 pier head provides more desirable berthing conditions by aligning the main berth with flow directions in the River, and reaches sufficient depth to provide all-tide access for the range of vessels anticipated to use the facility. The layout was then refined somewhat to reduce the size of the structure to keep the dimensions to the minimum necessary to accomplish the functional goals of the project. During this refinement, the dimensions of the pier head were reduced from the initially proposed 28-feet wide by 100-feet long, to the currently proposed 23-feet 4 inches wide by 80-feet long. The dimensions of the float dock system were reduced somewhat, and the layout of fender piles was refined to reflect a functional design with minimum necessary dimensions and impacts.

The preferred alternative as currently presented represents a facility of the smallest dimensions possible to provide a functional facility that provides all-tide access for the range of vessels anticipated to use the facility, and ADA compliant access to the floating dock and gangway system and berthed vessels. While it could be possible to further reduce site impacts by further reducing the dimensions of the facility, any reduction beyond the size that is currently proposed would impact the proposed uses of the facility.

Do Nothing Alternative

A Do Nothing Alternative is the least impactful option, but would fail to address the goal of providing all-tide access to support UNE's marine research and educational programming through the marine science center. The existing seasonal floats and gangway located on the UNE campus upstream of the MSC building do not effectively meet these needs. Therefore, a Do Nothing alternative is not considered to be a feasible long-term solution.

Re:	Proposed GMSC Pier Location University of New England, Girard Marine Science Center Pier Biddeford, Maine GEI Project No. 2203703

Summary and Purpose

The University of New England (UNE) proposes to construct a new pier on the Saco River adjacent to the Girard Marine Science Center (GMSC) to support research and educational programming. The project has been in development for more than 10 years and has gone through extensive planning and alternatives analysis in arriving at the design that is proposed. In October 2023, UNE staff held a meeting with several key stakeholders including the Biddeford and Saco Harbormasters, who raised questions as to the viability of relocating the pier further toward the east, downstream from the proposed location, in a revised alignment. The purpose of this memo is to summarize the process that has been undertaken for selecting the proposed pier location and to evaluate the advantages or disadvantages of the suggested alternative location compared to the proposed design.

Planning History

UNE has undertaken multiple studies to investigate locations and configurations for the proposed GMSC pier. These studies considered factors and constraints including but not limited to proximity to campus facilities, available water depths, site exposure to currents and wave action, upland site impacts, coastal wetland and habitat impacts, impacts to harbor uses such as fishing, recreational boating, and moorings, and estimated cost of construction. The proposed pier represents the preferred balance of these factors. The past studies that resulted in this design are briefly summarized below.

In 2008-2010, UNE completed a concept planning study to investigate opportunities for construction of improved water access to support marine science programs on campus. In this study, nine alternative design concepts were developed along the UNE waterfront consisting of various configurations of piers, boat ramps, and upland access and support facilities. The concept alternatives are shown in Fig. 1. The alternatives were evaluated on a range of criteria including technical criteria, functionality, constructability, regulatory impacts, costs of construction, and others to identify a preferred facility location. At the conclusion of this study, Site 7 (directly in front of the GMSC building) was identified as the preferred location to develop a new pier facility that would consist of a pile-supported pier extending from shore out into the Saco River. This location was determined to provide the best balance of site constraints and desired functions with good access from the GMSC, ability to achieve adequate water depths to allow for all-tide berthing of the anticipated vessels, and a location of river frontage semi-sheltered from currents and wave action.

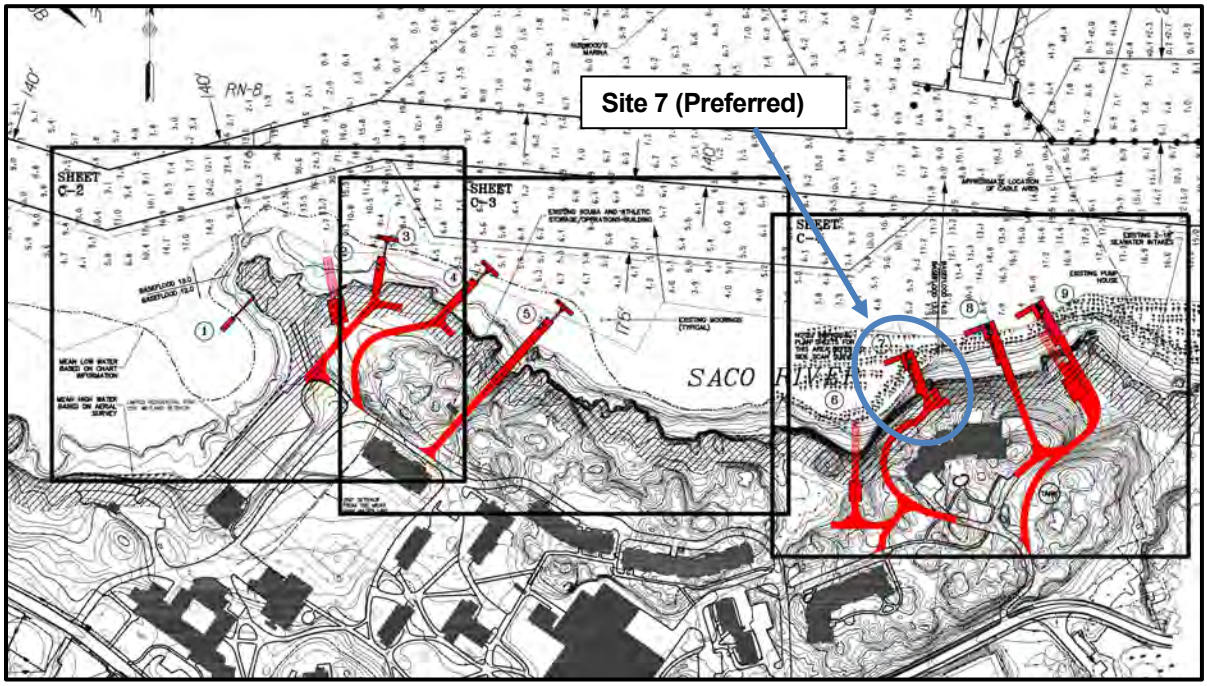

Fig. 1 – Alternative Sites Evaluated in 2008-2010 Study

After completing the pier feasibility study and identifying Site 7 as the preferred pier location, UNE undertook additional effort in 2015-2016 to study alternative pier layouts that would address the functional and vessel needs of the marine science curriculum as well as the site exposure, berthing conditions, access requirements, and associated site impacts. During this work, numerous alternative pier layouts were considered. Figs. 2 and 3 demonstrate some of the alternative layouts that were considered. This process allowed for consideration of desired pier dimensions and features, configurations of fixed structures and floating docks, pedestrian access needs, and other design criteria.

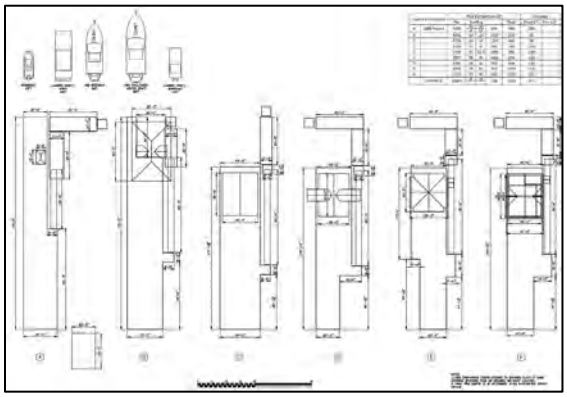

Fig. 2 – Sample of pier layout alternatives evaluated in 2015-2016 (1 of 2)

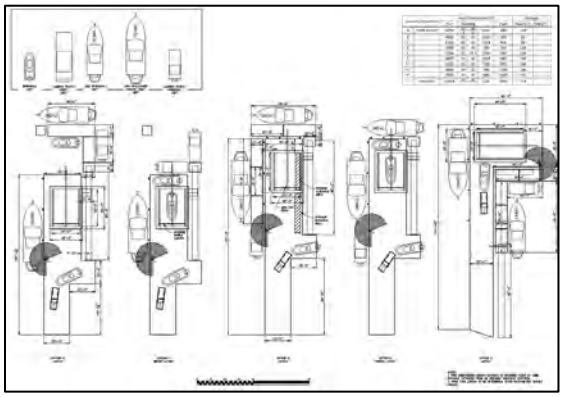

Fig. 3 – Sample of pier layout alternatives evaluated in 2015-2016 (2 of 2)

In February 2016, the proposed pier was reviewed with the with the Biddeford City Manager and key city representatives that included the Biddeford Harbormaster and Assistant Harbormaster and representatives from development staff and the Saco River Corridor Commission. Further input was gathered on river currents, recreational boating, and fishing activities resulting in the development of the three layout alternatives shown in Fig. 4 (labeled as Layout 1, Layout 2, and Layout 3). The

Harbormasters suggested that a layout with pier head oriented along the predominant direction of current such as shown in Layouts 2 and 3 would be preferable for vessels berthed at the facility. The Harbormasters also suggested that locating the pier closer to shore to minimize impacts to existing moorings and fishing activities would be preferable. These suggestions were taken into account in the next stages of design. A summary of the pier layout alternatives considered is provided in the attached memo from Baker Design Consultants dated March 22, 2016 titled "Consideration of an Alternate Pier Configuration as recommended by the City of Biddeford".

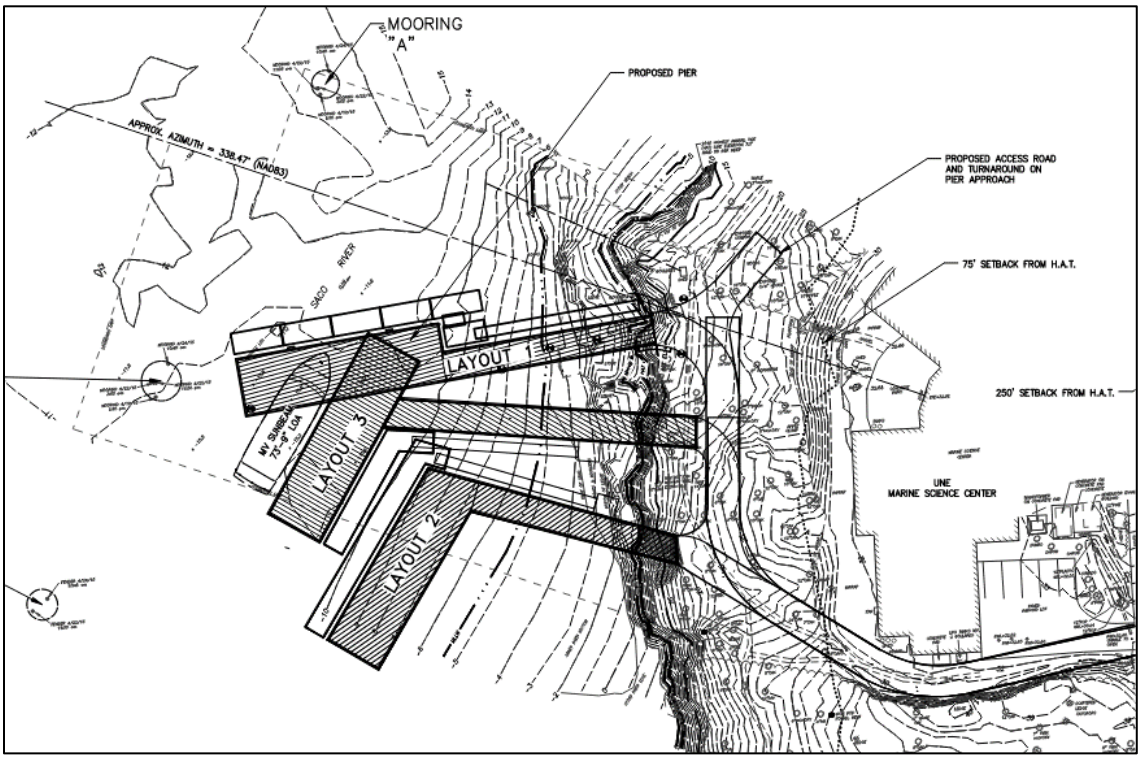

Fig. 4 – Pier layout alternatives developed in 2016 to address Harbormaster feedback

Final Design

In 2022, UNE resumed formal design development for the proposed GMSC Pier. At the start of this process, a layout was developed based on the 2016 layouts shown in Fig. 4 that reflected a combination of the pier head from Layout 3 and the pier approach from Layout 1. This new layout represented the optimal balance of site and functional constraints and upland access, with a pier head orientation that provides a main berth that is aligned with flow directions in the river, and sufficient depth to provide all-tide access for the range of vessels anticipated to use the facility.

The pier dimensions were refined through the design process to keep the structure to the minimum dimensions necessary to achieve the intended functions. This process resulted in a 22% reduction in footprint of the fixed pier, a 47% reduction in the footprint of floating docks, and a 17% reduction in the quantity of piles. Design development was advanced to 75% complete based on this design. The 75% design layout is shown in Figs. 5 and 6.

Fig. 5 – Proposed Pier Layout Vicinity Plan

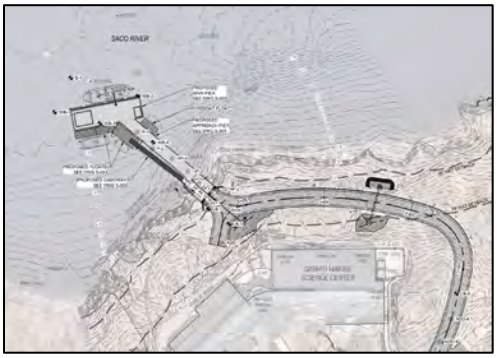

Fig. 6 – Proposed Pier Layout Site Plan

Alternative Location Analysis

In October 2023, UNE staff held a meeting to review the project with several key local stakeholders. During this meeting, the Biddeford and Saco Harbormasters suggested an alternative concept for the pier location that would relocate the pier further downstream from the proposed location as approximately shown in Fig. 7. In support of this alternative location, the Harbormasters cite deeper water, less impact to existing moorings, a location with more favorable water currents, and concerns of sediment deposition and potential need for dredging in the proposed pier location. Additionally, the Harbormasters have raised concerns about potential ice exposure given the history of icing issues at the Camp Ellis Pier directly across the River.

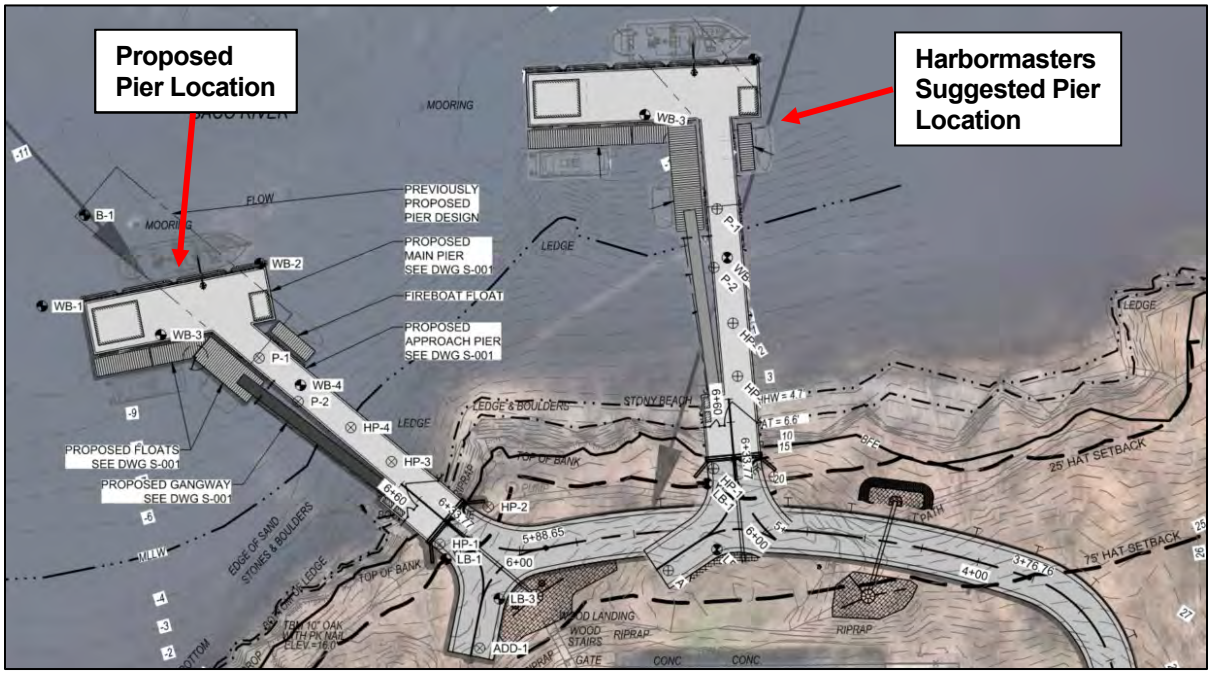

Fig. 7 – Alternative Suggested Pier Location

Review of Suggested Alternative Location

GEI has reviewed the suggested alternative layout and provided an evaluation of factors relating to the advantages and disadvantages of the proposed design versus the suggested alternative.

Water Depth

One reason for suggesting the alternative pier location is greater available water depths.

In the proposed design there is 5 to 6 feet of depth at mean lower low water (MLLW) at the main berth on the outer face of the pier which is sufficient for the proposed vessels using the facility. The suggested alternative location does have greater depth at the main berth, approximately 11 to 12 feet at MLLW. While this additional depth could allow larger vessels to use the pier, it is not needed to support the currently proposed and/or future envisioned uses.

The proposed design has 3.5 to 5 feet of depth at MLLW at the proposed floats on the inside of the pier, with sufficient distance to the MLLW line and a generally soft substrate near the floats to minimize risk of damage from vessels grounding out. In the suggested alternate location, the subtidal bottom slopes up rapidly behind the pier head. The available depth at the floats varies from 2 to 12 feet at MLLW, however the floats are in close proximity to a shallow ledge outcrop and there are concerns of hazardous conditions for vessels accessing these floats. In order to provide safe navigation to the floats the pier would need to be moved further downstream and/or extended further out into the River adding to its size, footprint, and cost.

From the standpoint of required water depths and navigational safety, the proposed design is preferred.

Exposure to Currents

The Saco River experiences currents due to tidal influence and riverine flows. To understand currents on the River, GEI has reviewed data gathered by the US Army Corps of Engineers as part of their study of erosion at Camp Ellis[1]. Figs. 8 through 11 demonstrate trends in current through differing stages of the tide. The magnitude of the current's velocity is represented by the length of the yellow arrows, with a reference arrow of 50 cm/s provided in the figures, while the current direction is indicated by the direction of the arrow. As can be seen from this data, the proposed pier location benefits from the natural shape of the shoreline which generally results in lower current velocities at the proposed location than at the downstream constriction of the River where the suggested alternate location would be located.

The lower current velocities at the proposed pier location compared to the suggested alternate result in more favorable conditions for vessels berthing at the pier, greater safety for vessels and users, and reduced structural loading on the pier. For these reasons, the proposed pier location is preferred from the standpoint of exposure to currents.

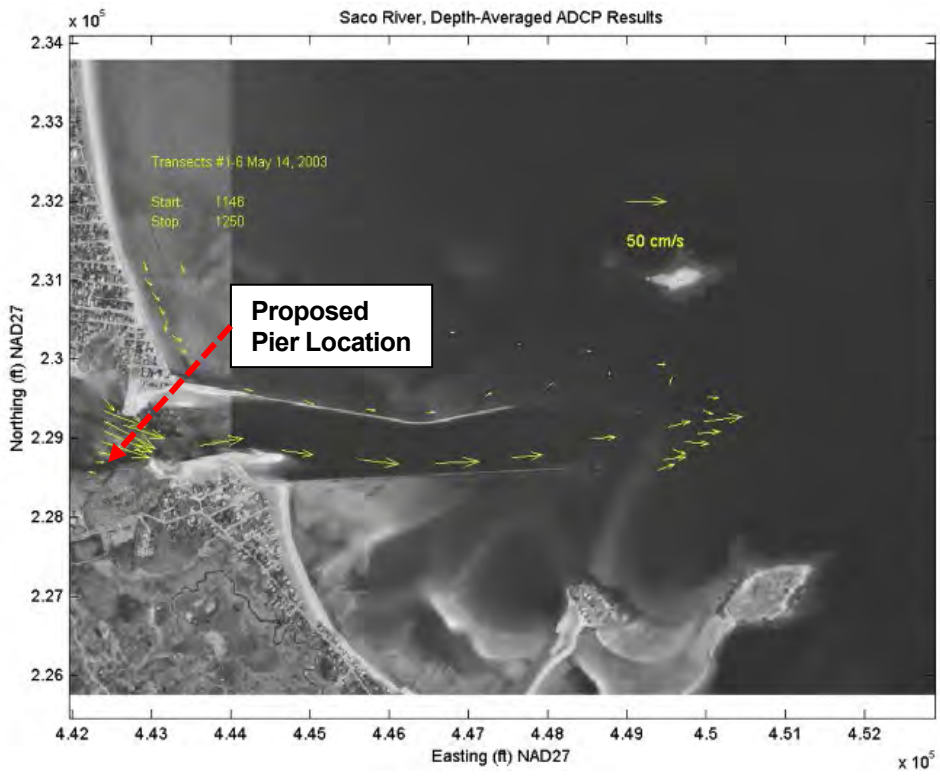

Fig. 8 – Sample of USACE Current Monitoring Data

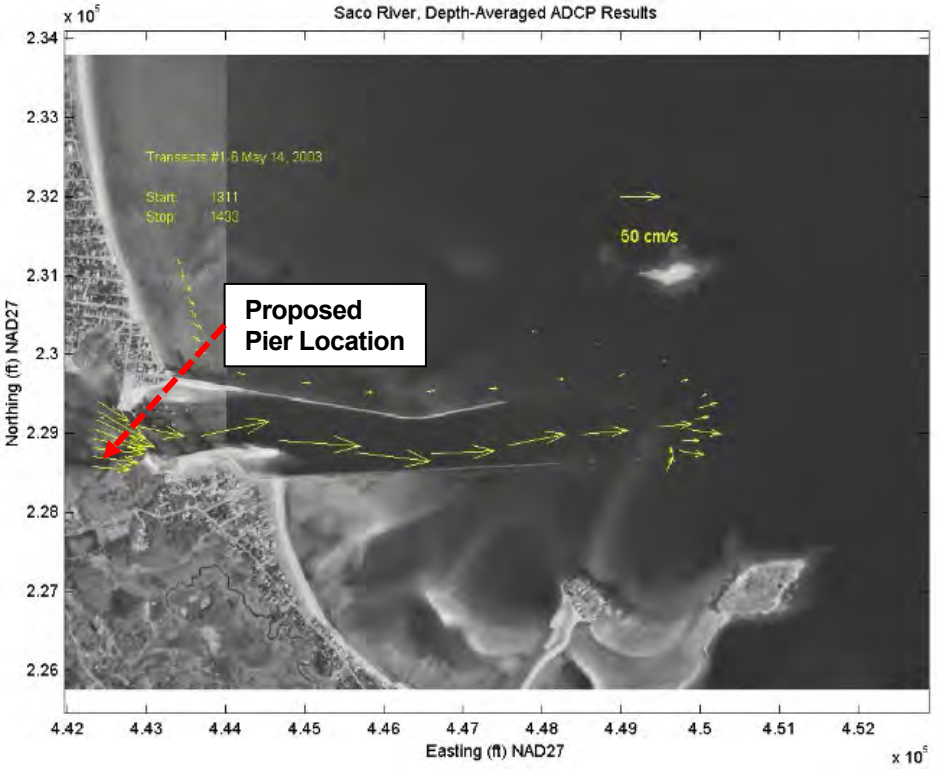

Fig. 9 – Sample of USACE Current Monitoring Data

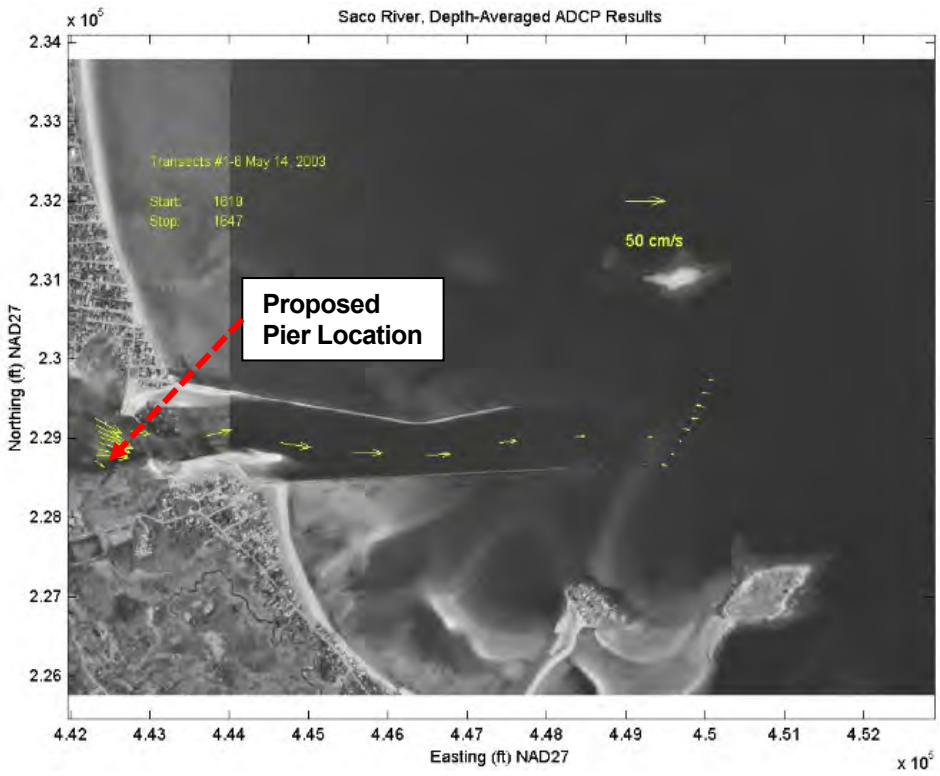

Fig. 10 – Sample of USACE Current Monitoring Data

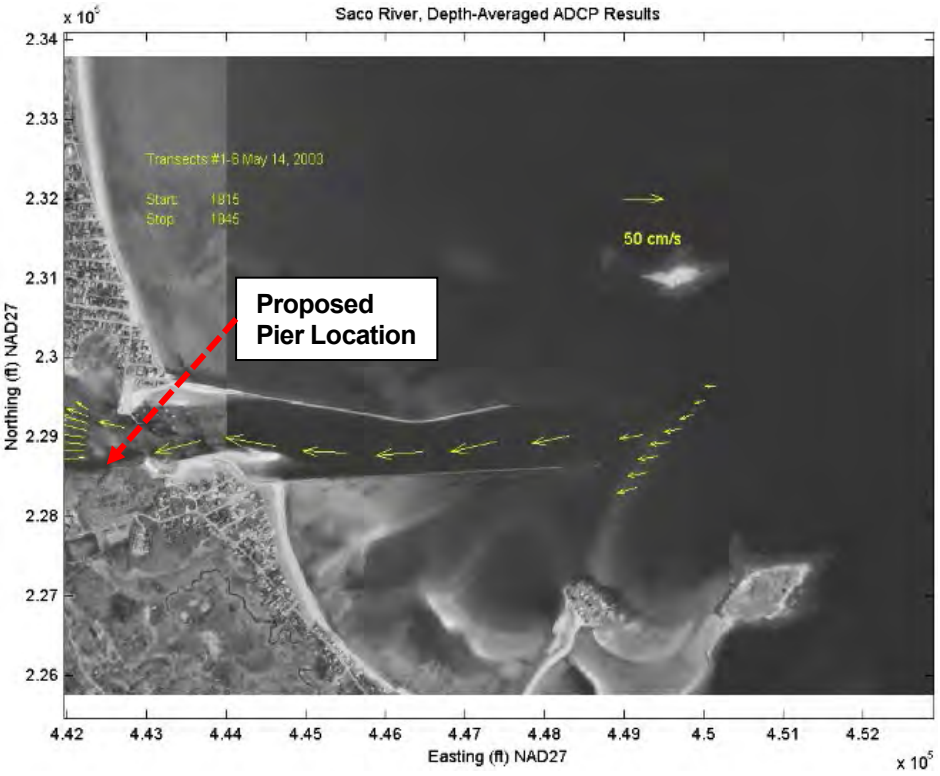

Fig. 11 – Sample of USACE Current Monitoring Data

Location Relative to River Sediment Deposition

The Harbormasters commented during the October 2023 meeting that the proposed pier location may be subject to sediment deposition that may impact pier navigation over time and require dredging in the future to restore water depths. As part of the project development, bathymetric surveys were completed in the pier area in May 2015 and again in November 2022. Fig. 9 provides an overlay of these two surveys (2022 contours are shown blue, 2015 contours are shown grey and red). In comparing these two surveys, there is negligible difference between the surveys that were taken 7.5 years apart. While there are minor differences that can be observed in contour locations and shapes, these could be attributed to the bathymetric survey accuracy and method of modeling the three-dimension surfaces used to create the contours. None of the differences are significant enough to suggest that there are large scale trends of deposition in the project area. Based upon this review, there is no indication that sediment deposition will be a substantial concern in the proposed area of the pier, and it does not appear that the suggested alternate pier location offers an advantage.

The proposed pier location does not appear to be in an area that is subject to notable sediment deposition and remains the preferred location.

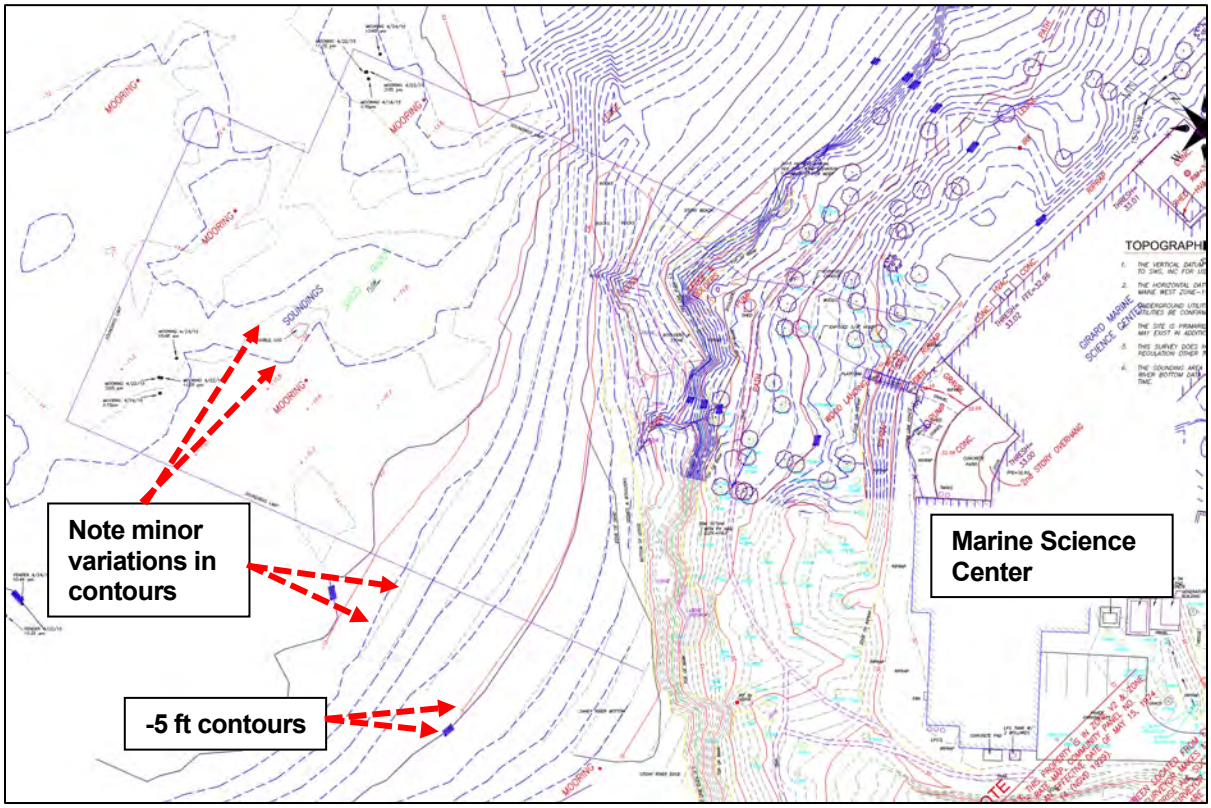

Fig. 12 – Comparison of 2022 (blue) and 2015 (grey and red) bathymetric contours

Exposure to Icing

The Harbormasters have raised concerns about exposure of the pier to winter icing. Icing on the Saco River is also a concern of UNE and the design team. The River is known to experience ice floes during the winter season that have historically been damaging to vessels at Camp Ellis. In terms of designing the fixed pier structure, the exposure to ice loading has been considered and the pile

supported pier structure will be able to sustain the forces from ice. The primary concern of the design team with winter icing is related to the impact on floating docks and berthed vessels. The ability to keep the facility in operation throughout the winter months when exposed to icing is still being evaluated by UNE. Additional steps are planned to monitor the site through winter conditions to better understand the extent of icing and potential impacts. The results of this investigation will inform the facility operations and vessel berthing plans. Methods being considered to mitigate the risks of ice impact to floats and vessels may involve the installation of additional temporary or permanent protective measures and/or limiting use of the pier during times when icing is anticipated. Irrespective of the ice protection and operational measures that may ultimately be included, the proposed pier location has less velocity exposure to icing than the suggested alternate location given its location and therefore reduced exposure. For this reason, the proposed design is preferred.

GEI has designed the fixed pier structure to resist the impact associated with river icing. Irrespective of pier location, the UNE will need to plan facility operation during periods of icing to manage risk associated with reduced facility use.

Impact to Moorings

The proposed pier layout is in close proximity to one existing known mooring which will likely need to be relocated to allow for the proposed construction. The suggested alternative is also in close proximity to one existing known mooring which would also need to be relocated if this alternative was used. Therefore, from the standpoint of mooring impacts, the proposed design and the alternative are believed to be similar.

To address anticipated impacts to moorings, GEI and UNE are prepared to work with City staff as necessary to allow for mooring adjustments to accommodate the proposed pier.

Conclusions and Closing

GEI has reviewed the concerns raised by the Saco and Biddeford Harbormasters and evaluated their impact on the proposed design, reviewed the history of planning that led to the current design location and layout, and reviewed the potential advantages and disadvantages offered by the suggested alternative pier location. While we respectfully value the input and suggestions for a layout alternative, it is our opinion that the proposed design represents the preferred balance of project requirements and site constraints. Compared to the suggested alternative, the proposed design achieves adequate water depth, provides safe navigation, results in a structure of smaller overall dimensions with less coastal wetland impact, does not appear to be subject to significant sediment deposition, and locates the pier in a location that is less exposed to current and icing impacts. For these reasons, GEI recommends that the current design and pier location be maintained.

We would be happy to discuss any elements of this memo at your convenience. Please contact Dan Bannon (dbannon@geiconsultants.com) or Barney Baker (bbaker@geiconsultants.com) with any questions.

Subject: Consideration of an Alternate Pier Configuration as recommended by the City of Biddeford

\\BDC-SRV\PROJECTS\15\15-07 UNE MSC WATERFRONT\DESIGN\ALTERNATE PIER LOCATION STUDY\15-07 UNE PIER ALTERNATIVES MEMO MARCH 2016.DOCX

MEMO

Introduction

Baker Design Consultants (BDC) completed a pier feasibility study in 2010 study for the University. The work first defined the type of pier and parameters necessary to support the Marine Science program and then looked at the entire Saco River shoreline of the Biddeford Campus for suitable sites. Concept pier layouts for nine (9) sites were prepared and then compared in a matrix format that looked at the ability of the pier to meet the program objectives, the respective shore and waterside development challenges, the environmental impacts associated with each solution and the approximate cost and scope for construction. The pier was added to the long-term facility plan for the University.

In September 2015, BDC was retained to develop the design for a new pier at the site that had been most favorably rated in the 2010 study. Site No. 7 met the operational objectives for the pier and was located close to the Marine Science Facility pier with access to deep-water. The design has advanced through several stages of UNE MSC faculty review to define an optimum footprint and access for the pier. This was followed by site survey and geotechnical borings to verify water depths and subsurface conditions at the proposed pier location. Initial contact with the regulatory agencies has been made, but no permits applications have been filed to date. The Biddeford Harbormasters were invited to the site to review the pending (now complete) geotechnical exploration and the pier was discussed briefly at this meeting.

In February, Barney Baker and Alan Thibeault met with the City Manager and key city representatives that included the Harbormasters and representatives from development staff and the Saco River Corridor Commission. Preliminary plans for the pier were reviewed and discussed with an opportunity for staff to share comments on the proposed design. The Harbormasters were particularly keen advocates for design adjustments based on their knowledge and experience with the Harbor. All City staff was supportive of the pier and recognized the benefits it will provide to the Marine Science program at UNE.

This memo considers comments made by City staff on the current design and considers two Alternate Layouts to evaluate the changes requested. Refer to the appended drawings that show the three (3) Layouts discussed in this memo. Sheet C-1 shows the pier site in the relation to other features in the Saco River Basin.

Sheet C-1 - Saco River Basin
Sheet 1 of 4- Layout 1- Current Design
Sheet 2 of 4- Layout 2- Incorporating all City Recommendations
Sheet 3 of 4- Layout 3- Modification proposed by BDC
Sheet 4 of 4- Composite showing all 3 Layouts

Recommendations for Pier changes made by the City.

The City suggested changes to the proposed pier (Layout 1) at the February 2016 review meeting are outlined below with comments from Baker Design Consultants (BDC Response). These collectively advocate for the pier to be relocated inshore, upstream and realigned to be more parallel with the shore.

Alternate Pier configurations (Layout 2 and Layout 3) are appended. These were prepared to investigate and illustrate the changes that would be necessary to incorporate the recommended pier changes. The Table on page 4 provides a summary comparison of the proposed design (Layout 1) with the Alternate Layouts.

1. Place the pier closer to shore to minimize existing moorings impacts.

The Harbormasters were concerned that the proposed pier (Layout 1) impacted the location of several moorings and that this would create specific hardship for individual mooring holders and harbor management in general. The Harbor masters made general reference to several mooring holders, but did not have access to a plan to show where these were located.

BDC Response. Both Alternate Layouts (2 & 3) move the pier closer towards shore. Refer to tabulated mooring clearances in the Table that follows for each Layout considered.

The moorings in the pier area at the time of the April 2015 survey were put on the plan and a general search was made of google earth aerial photographs going back several years for others that might not have been in the water at the time of the field survey.

The three recorded moorings nearest the pier site are identified on the attached plans as Mooring "A", "B", and "C". For each of the pier layout alternates considered, the distance from the approximate mooring center point to the nearest point on the pier is tabulated. A clear distance in excess of 110 to 120-ft is considered an acceptable mooring clearance to the pier

2. Consider pier impacts to nearshore fishing.

The Harbormasters indicated the nearshore at the pier location was used by fishermen that use small boats to fish along the southern shore of the river from upstream to downstream. The proposed pier would require boaters to move out and around the pier and may be perceived as a barrier to the fishing activity. It was pointed out that any new pier at any waterfront location will have a similar impact on near shore navigation, but moving the pier inshore would reduce the necessary detour.

BDC Response: It is acknowledged that while the pier would influence nearshore navigation, it was well clear of the designated federal channel and boats moving around the pier would not conflict with channel traffic. The nearshore fisherman in small boats could pass under the approach section of the pier at all states of the tide in Layout No. 3 but would be restricted at low water by floats and gangway in Layouts 1 & 2.

3. Relocate pier further upstream and change orientation to reduce current exposure.

The Harbormasters confirmed that the channel restriction located just seaward of the pier created fast currents that ran parallel to shore. Based on their knowledge of the harbor, they suggested the pier would be better rotated upstream parallel to the current and moved upstream and inshore from the Layout 1 location. This would put the pier in water with less tidal current and make docking easier and safer.

BDC Response. BDC indicated they had studied a 2006 study by the Army Corps of Engineers of currents at the pier location and had already oriented the pier upstream and away from the highest tidal currents while maintaining deep water access to both sides of the pier. It is recognized that moving the pier upstream reduces the current exposure, but because the water shoals, the vessel berthing is less efficient. BDC feels strongly that dredging is a last resort because of high cost, unreliable timeframes for periodic maintenance.

Alternate Layouts 2 & 3 benefit from the local knowledge and recommendation of the Harbormasters by effectively placing the pier in calmer water with an improved docking angle to the current. However, in both alternate configurations there is a decrease in the pier face docking provided by the pier. Layout 3 also would require dredging to maintain float access. Refer to the attributes for each Layout in the Table that follows.

4. Reduce length of pier access road to reduce visual impact on shore.

This comment was made in consideration of tree cutting, vegetation removal, and regrading that would be necessary to create an access road to the pier. The road access is located within the 250' Shoreland Zone. The visual impact will be carefully reviewed by the Saco River Corridor Commission. It was suggested that the access road length to the pier could be reduced by relocating the pier upstream from the current Layout 1 location.

BDC Response. Preliminary road alignment and profiles are provided for each layout in the appended drawings and compared in the Table on page 4. In each case, the access road extends around the existing Marine Science Center building to provide equipment and vehicle access to the pier. At the pier abutment it is necessary to provide a vehicle turnaround. Options that locate the pier approach further upstream require a sloped pier approach connector in order to accommodate the steeper grades at the shore This undesirable feature is alleviated by providing a turn-around space on the Pierhead.

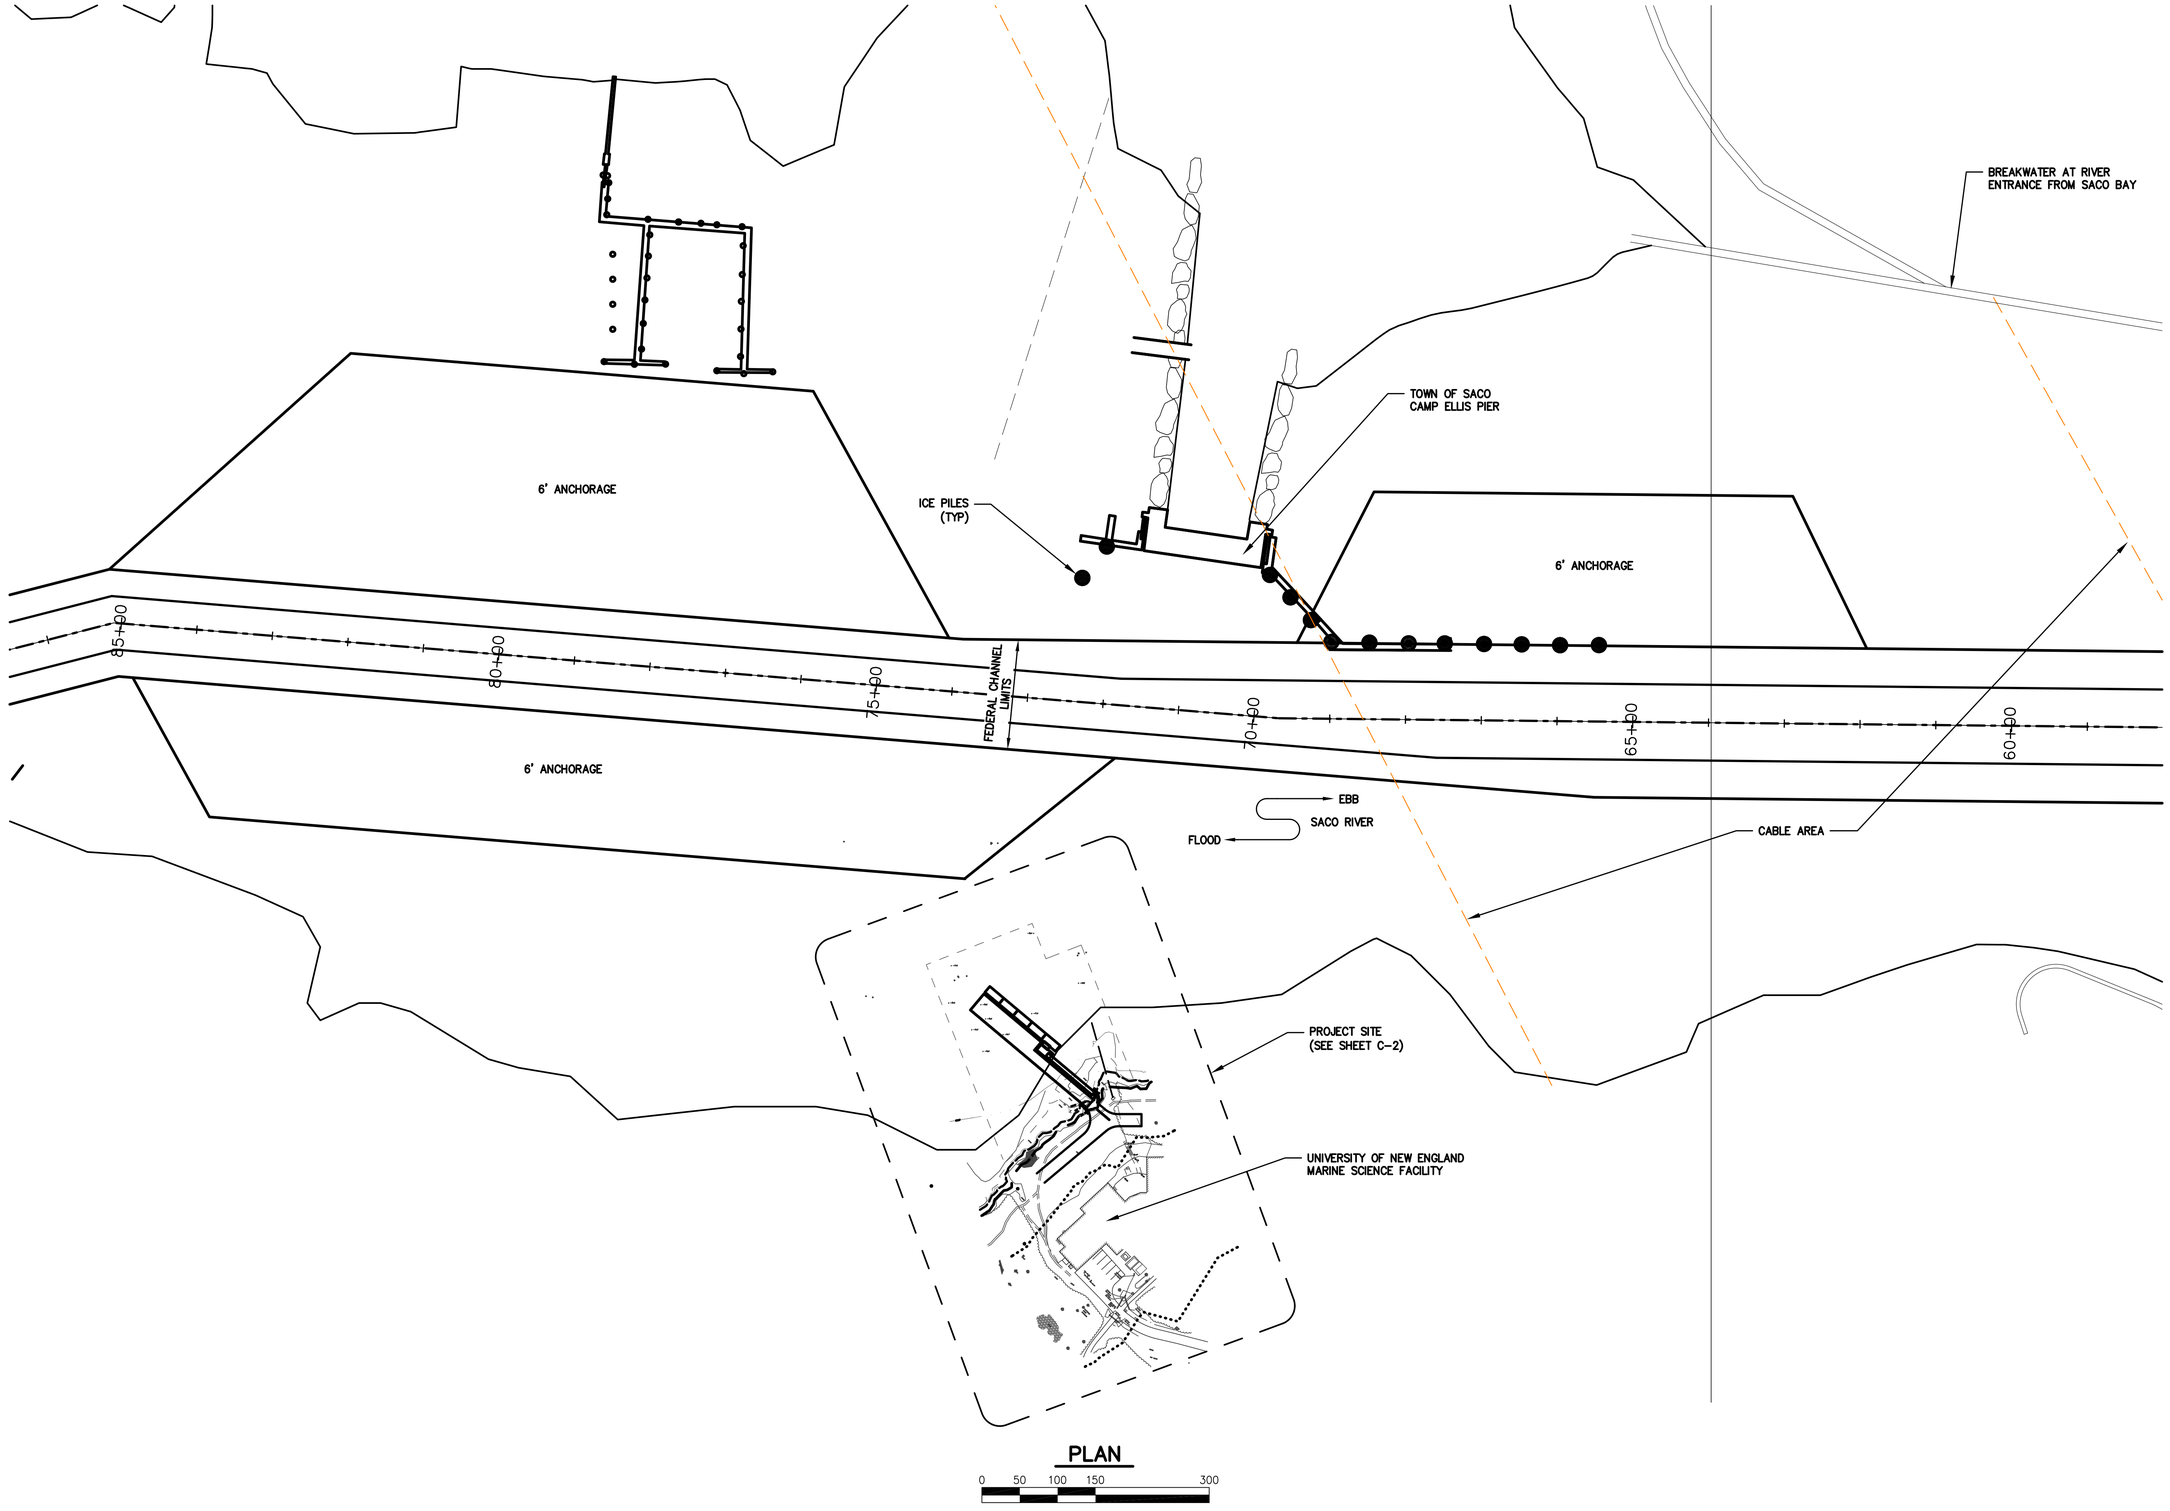
Alternatives Study Results summary

In summarizing the results of this Alternatives Study, the following points can be made.

- The local knowledge and insight provided by the City is both timely and helpful. The input provided both validates the Layout 1 design development to date and creates the opportunity to make small design improvements to reduce the tidal current exposure at the pier.
- Layout 2 does not work because of the steep shoreside access and the need to consider dredging in order to effectively use both sides of the pier.
- Layout 3 benefits from inside docking of small vessels, reduces access road impacts on shore with minimal concessions in water depth. However, the footprint of the pier (and cost) is increased and it is necessary to slope the connector pier to make the shore transition work. While the geotechnical fieldwork connected to date would be useful, additional geotechnical work is needed to verify subsurface conditions.

Moving forward, we recommend that Layout 3 be considered by UNE staff as a viable alternative for consensus approval with City stakeholders in advance of further design and regulatory discussion.

Please contact me with any questions.



Barney Baker, PE
Principal

Permits

COMMISSION ORDER
IN THE MATTER OF

UNIVERSITY OF NEW ENGLAND 11 HILLS BEACH ROAD BIDDEFORD, ME 04005 PERMIT #20-491	SACO RIVER CORRIDOR ACT FINDINGS OF FACT AND ORDER

The Saco River Corridor Commission, created by the Maine State Legislature in the Saco River Corridor Act, 38 M.R.S.A. §951, et seq., (the Act), at a meeting held on August 28th, 2024, at the Porter Town Hall in Porter, Maine, and after a review of the application and supporting documents makes the following findings of fact:

PROJECT DESCRIPTION

1. The applicant is seeking a permit to construct a research pier with associated development, including a dock and float system, shed, and access road.

SITE LOCATION/DESCRIPTION

2. The property is described in the York County Registry of Deeds, Book 1484, Page 145.
3. Location: Lot 4 (Map 52) at 11 Hills Beach Road in Biddeford, Maine.
4. The 49.9-acre lot has approximately 3,500 feet of frontage on the Saco River
5. Most project activities are proposed within 250 feet of the high water line.
    a. The proposed pier, dock and float system, and shed (located on the pier) extend below the mean high water line of the Saco River.
    b. The access road begins slightly beyond the 250-foot buffer; as it turns parallel to the river, it enters the 75-foot buffer and only extends into the 25-foot buffer, where it connects to the pier at the shoreline of the Saco River. The proposed turnaround area is located outside of the 25-foot buffer.
6. The property is located in the General Development District.
7. The 100-year floodplain is limited to the immediate shoreline.

ANALYSIS

Pier Structure

8. The applicant proposes to construct a permanent vehicle-rated pier structure extending from the shore into the Saco River. The proposed pier consists of an approximately 130-foot-long approach section and an 80-foot-long pier head section oriented parallel to the flow of the river. The proposed pier consists of a concrete superstructure on 25 concrete-filled steel pipe piles (7 of which will be socketed to ledge, with the remaining 18 to be driven to ledge), with 30 untreated timber piles for vessel berthing and floating docks, and a pile-supported gangway lifting beam

which will allow the gangway to be removed from the water temporarily. All of the piles are located below the highest annual tide line.

9. The direct impact from all piles totals 84 square feet, while the indirect impact below the highest annual tide line from the pier footprint is 3,579 square feet.
10. A concrete abutment connecting the pier to the access road is located above the highest annual tide line.

Floating Dock System & Gangway

11. The proposed floating dock system consists of one 8 x 24-foot float, one 8 x 26-foot, 10-inch float, and one 12 x 30-foot gangway landing float to provide all-tide vessel access on the west side of the pier. A 6 x 20-foot floating dock (relocated from an existing upstream location on the property) is also proposed to provide a tie-up location for the City of Biddeford Fire Boat on the east side of the pier.
12. The applicant additionally proposes an 80 x 5-foot gangway on the west side of the pier to provide ADA-compliant access to the float system.
13. All floating docks are located below the mean lower low water line and are proposed to be restrained and guided by the timber piles. The proposal will allow vessels to tie up to the pier during all tide levels.
14. The floating dock system has a total indirect impact of 848 square feet, and the gangway has a total indirect impact of 357 square feet.

Pier Buildings

15. An 8 x 10-foot shed is proposed on the east side of the pier head to provide storage for small equipment and to house utility features (electric panels).

Access Drive

16. The applicant proposes to construct a 16-foot-wide paved access road with 2-foot-wide paved shoulders extending from the road near the Marine Science Center around the east side of the Marine Science Center to the proposed pier, as well as associated grading, drainage, and stormwater management features.
17. A turnaround is proposed adjacent to the pier to allow vehicles, including fire trucks, to redirect and exit via the access road.
18. The applicant reports that vehicles will use the existing parking spaces adjacent to the Marine Science Center and that no parking is proposed adjacent to the pier.
19. The applicant states that the proposed access road will provide construction access for the project and allow more staging to take place on land, minimizing impacts to the water.
20. They report that upland work includes stormwater management features that have been designed to meet Maine DEP Chapter 500 standards.

Summary of Statement of Necessity

21. The proposed pier will provide students and researchers year-round access to the river and ocean, including a "living laboratory" located on Ram Island in Saco Bay, which is currently inaccessible during the winter and spring when the seasonal dock and float system aren't in use. The applicant states that the pier will facilitate research activities and scientific and practical exchanges with local, regional, and national marine researchers and industry partners. They note

that the marine research afforded by the proposed year-round access will allow UNE to gather data to guide Maine's response to climate change and inform data-driven decisions impacting aquaculture, fisheries, marine law and policy, and related fields.

General Background

22. The applicant reports that the area where the pier will be located is ledge, with adjacent areas consisting of undeveloped sparsely wooded areas and coastal wetlands.
23. The applicant addressed the §959-A.(A-K) standards in the project description. Where applicable, the staff has added additional details gathered from site plans. In summary:
    a. Degradation of Air and Water Quality – no anticipated impacts.
        i. Vegetation swales and two bioretention filtration ponding areas are proposed along the access road as part of the stormwater management plans.
    b. Harmful Alteration of Wetlands – no anticipated significant impacts (84 square feet of direct impact as noted above in Item 9.)
    c. Increase in Erosion and Sedimentation –
        i. The soils in the project area are not highly erodible, and the pier is located over exposed ledge and ledge with overburden.
        ii. All construction and site alterations will be done in accordance with Maine Erosion and Sedimentation Control Best Management Practices, and the site will be permanently stabilized following completion of construction.
        iii. Site plans note that the siltation boom will be installed for the duration of the construction process.
    d. Danger of Increased Flood Damage –
        i. The structure has been designed to withstand flood impacts, and its elevation takes into account rising sea levels.
    e. Obstruction of Flood Flow – no significant impacts
    f. Damage to Fish and Wildlife Habitat – no significant impacts
    g. Despoliation of Scenic Rural, and Open Space Character of the Corridor –
        i. The project's limit of disturbance encompasses 0.92 acres, with vegetation removal taking place in that envelope to provide a cleared area for the access drive and stormwater facilities.
        ii. 44 trees, including stumps, are proposed for removal within the project area.
        iii. 10 to 25 feet of clearing is proposed on average along either side of the access road. Clearing in several areas is greater to accommodate stormwater structures.
        iv. The remaining open space will be maintained, natural surroundings will be preserved, and scenic views from neighboring properties will not be obstructed.
        v. Given the water-dependent nature of the project, it will be visible from the river.
    h. Overcrowding – no significant impacts
    i. Excessive noise – no significant impacts
    j. Obstruction to Navigation –
        i. The structures will be no closer than 208 feet from the Army Corps of Engineers anchorage area.
        ii. Site plans note that construction activities will not impact the federal navigation channel at any time.

k. Interference with Educational, Scenic, Scientific, Historic, or Archaeological Values of the Areas Designated and Approved for Inclusion within the Resource Protection District
    i. The project is not located in the Resource Protection District, and the applicant states that it will enhance the area's educational value.

24. At the August 14th, 2024, Rules Committee meeting, the Committee expressed concerns about the diminution of the vegetated buffer as a result of the proposed access road construction. They noted that the removal of vegetation in that area could increase the visual impact of the existing Marine Science Center and of the access road itself. The Committee suggested that, if possible (depending on site conditions), the applicant should propose additional plantings between the access road and the shoreline.
25. In response to the Rules Committee comments:
    a. The applicant's agent submitted an updated vegetation plan, which reduced the number of trees proposed for removal by five trees, most of which were in the 25-foot buffer. The updated vegetation plan also clarified the number of trees 8 inches in diameter and greater within the 25-foot buffer that would remain post-construction.
    b. The applicant's agent stated that it was not possible to reduce the width of the access drive to less than the currently proposed 20 feet due to the National Fire Protection Association codes.
    c. The applicant's agent submitted the Stormwater Inspection and Maintenance plans for the project, which will include routine inspections of the systems post-construction to ensure proper function.
26. Staff notes from the August 23rd, 2024, site visit state:
    a. The area has many smaller shrubby vegetation. Numerous large trees are also present, and they are proposed for removal.
    b. A cleared opening would be created between the River and the Marine Science Center.
    c. The proposed clearing (for the road) extends no closer than 25 feet from the mean high water line. However, little vegetation would remain in some areas.
27. At the August 28th, 2024, Commission meeting:
    a. Public comments were heard and considered for impacts on the Commission's standards.
    b. The applicant presented an updated revegetation plan using native plantings for a 1:1 replacement ratio.
    c. The Commission questioned the status of other agencies' review of the project.
        i. The applicant's agent stated that the US Fish and Wildlife Service had advised that the work window be limited to November to April.
    d. The applicant's representatives estimated that the finished pier, including railings, would be approximately 26 feet above the water at low tide.
    e. The applicant's agent clarified that the previously proposed classroom on the pier head had been removed from the proposal.

RELEVANT STANDARDS OF THE ACT

§957-A. Resource Protection District | §957-C. General Development District | §959-A. Requirements for granting permits | §962. General Performance Standards | Chapter 102: Standard Conditions of Approval | Chapter 103: Standards to Address the Environmental Factors

BASED ON THE ABOVE FINDINGS, as determined at a duly noticed Commission Meeting, the Commission draws the following conclusions:

1. The applicant has shown the proposed design to be within the meaning of the Act.
2. The proposed use will not unreasonably involve any of the factors enumerated in §959-A(1)(A)-(K) of the Act.

THEREFORE, the Commission APPROVES the application of the University of New England, #20-491, for a permit to construct a research pier with associated development on the property owned by them, provided the activity is carried out according to the application and UPON THE FOLLOWING CONDITIONS:

1. Standard Conditions of Approval (copy attached).
2. All in-water portions of the existing research pier shall be removed.

This decision, including any of its conditions, may be appealed pursuant to 38 M.R.S. §968, except that no appeal pursuant to 38 M.R.S. §968 shall be taken from a decision of the Commission which decision was made without a public hearing until a request for reconsideration has been submitted to the Commission, and the Commission has made a final determination in the matter. Any person wishing to file an appeal or to request reconsideration must do so within 30 days of the Commission's written decision and order. Requests for reconsideration must be submitted in accordance with applicable Commission regulations. To be valid, all permits must meet all federal, state, and local ordinances and regulations.

DONE AND DATED AT CORNISH, MAINE, THIS 13TH DAY OF SEPTEMBER 2024.

DEPARTMENT ORDER

IN THE MATTER OF

UNIVERSITY OF NEW ENGLAND	) NATURAL RESOURCES PROTECTION ACT
Biddeford, York County	) COASTAL WETLAND ALTERATION
COMMERCIAL PIER SYSTEM	) WATER QUALITY CERTIFICATION
L-18314-4P-BE-N (approval)	) FINDINGS OF FACT AND ORDER

Pursuant to the provisions of 38 M.R.S. §§ 480-A–480-JJ, Section 401 of the Clean Water Act (33 U.S.C. § 1341), and Chapters 310, 315, and 335 of Department rules, the Department of Environmental Protection (Department) has considered the application of UNIVERSITY OF NEW ENGLAND (applicant) with the supportive data, agency review comments, public comments, and other related materials on file and FINDS THE FOLLOWING FACTS:

1. PROJECT DESCRIPTION:

A. History of Project: In Department Order #L-18314-22-A-N, dated April 12, 1993, the Department granted after-the-fact approval to the University of New England for an expansion of the main campus. In Department Order #L-18314-22/31-J-M, dated December 19, 1996, the Department approved the construction of athletic facilities, a service road, a pier system, and seasonal floating dock on the Saco River. In Department Order #L-18314-22-L-A, dated May 31, 2000, the Department approved the construction of the Marine Science and Research Center and included a modification to the pier and floating dock. In Department Order #L-18314-22-AY-M/L-18314-4P-AZ-M, dated July 13, 2017, the Department approved the addition of two six-foot wide by 16-foot long seasonal floats attached seaward and perpendicular to the existing permanent floats oriented parallel to shore. A second, seasonal pier system was installed on Jordan Point in 2016. In Department Order #L-18314-22-BC-M/4P-BD-N, dated December 7, 2023, the Department approved the replacement of the second seasonal pier with a permanent pier system consisting of a six-foot wide by 63-foot long fixed pier, an existing four-foot wide by 48-foot long seasonal aluminum gangway, and an existing 10-foot long by 60-foot wide seasonal float system. The completed project resulted in 16 square feet of direct impacts and 1732 square feet of indirect impacts to the coastal wetland.

B. Summary: The applicant proposes to construct a new commercial size pier to provide all-tide access for the Marine Science Center and dock space for the City of Biddeford fireboat used for public safety. The proposed permanent pier structure will be built in three sections: section one consist of a 23-foot wide by 30-foot deck with a security gate, that connects to the second 14-foot wide by 100-foot long pier structure that seaward into the river, and the third pier section a 23-foot wide an 80-foot long pier head that will be oriented parallel to shore and a five-foot wide by 80-foot long permanent gangway perpendicular to the shore. The pier head and gangway will be flanked by four permanent floats running end to end parallel to shore; an 8-foot wide by

24-foot long float an 8-foot wide by 27-foot long float, a 12-foot wide by 30-foot long gangway landing float to provide all-tide access on the west side of the pier and a six-foot wide by 20-foot float to provide a tie-up location for the City of Biddeford's Fire Boat on the east side of the pier, both perpendicular to the shore. The pier system will be supported by 25 concrete-filled steel pipe piles and a concrete abutment which connects the pier to the proposed access road. The project as proposed will result in 84 square feet of direct impacts to the coastal wetland due to pilings, and 3,579 square feet of indirect impacts to the coastal wetland due to shading from the pier, ramp, and floats. The large size of the pier and gangway will accommodate an outdoor covered classroom, ADA-compliant access and fireboat tiedown float, and vehicular access to the pier for transportation of research and emergency equipment. Between this proposed pier and the currently existing pier system, cumulative direct impacts to the coastal wetland will total 100 square feet, and cumulative indirect impacts to the coastal wetland will total 5,311 square feet.

In addition to the proposed pier system, an upland access road connecting the existing road to the proposed pier will be constructed, including associated site grading, drainage, and stormwater management features. Work on the access road will result in approximately 475 square feet of impacts adjacent to the coastal wetland. Upland work proposed will not exceed 40,000 square feet of additional disturbed area and thus is exempt from permitting pursuant to M.R.S 38 §488(27)(A).

The proposed project is shown on a set of plans, the first of which is titled "University of New England Marine Science Center Pier", completed by GEI Consultants, Inc. and dated April 22, 2024. The project site is located at 11 Hills Beach Road in the Town of Biddeford.

C. Current Use of the Site: The project site is located on an approximately 50-acre parcel of land that is developed with various university buildings and a permanent pier system. The parcel is identified as Lot 4 on Map 52 of the City of Biddeford's tax maps.

D. Public Interest: The Department received emails from one individual between September 4 and December 11, 2024. The interested person expressed concerns related to the Town's project review process. Additionally, the interested person stated that the applicant did not consider alternative locations for the pier that would be less impactful to the resource. After reviewing the application, the Department determined that the applicant provided a sufficient alternative analysis which is further discussed in Section 4.

The interested person submitted a public hearing request on July 1, 2024. The request was reviewed by the Department and a response sent on August 20, 2024, citing that the application did not meet the Chapter 2 criteria for the Board to hold a hearing.

2. EXISTING SCENIC, AESTHETIC, RECREATIONAL OR NAVIGATIONAL USES:

The Natural Resources Protection Act (NRPA), in 38 M.R.S. § 480-D(1), requires the applicant to demonstrate that the proposed project will not unreasonably interfere with existing scenic, aesthetic, recreational and navigational uses.

In accordance with Chapter 315, *Assessing and Mitigating Impacts to Scenic and Aesthetic Uses* (06-096 C.M.R. ch. 315, effective June 29, 2003), the applicant submitted a copy of the Department's Visual Evaluation Field Survey Checklist as Appendix A to the application along with a description of the property and the proposed project. The applicant also submitted several photographs of the proposed project site and surroundings including an aerial photograph of the project site.

The proposed project is located in the Saco River, which is a scenic resource visited by the general public, in part, for the use, observation, enjoyment and appreciation of its natural and cultural visual qualities. Given the piers on abutting properties and the existing pier on the same parcel, the proposed pier will not substantially alter the visual aesthetic of the riverbank from the river. The proposed pier system is of similar size, scale, and design as nearby pier systems, including a commercial marina with slips located directly across the river and visible from the project site.

The Department staff utilized the Department's Visual Impact Assessment Matrix in its evaluation of the proposed project and the Matrix showed an acceptable potential visual impact rating for the proposed project. Based on the information submitted in the application and the visual impact rating, the Department determined that the location and scale of the proposed activity is compatible with the existing visual quality and landscape characteristics found within the viewshed of the scenic resource in the project area.

The Department of Marine Resources (DMR) reviewed the project and stated that the proposed project should not cause any significant adverse impact to navigation or recreation based on the nature of the project and its location.

The Department finds that the proposed activity will not unreasonably interfere with existing scenic, aesthetic, recreational or navigational uses of the river.

3. SOIL EROSION:

The NRPA, in 38 M.R.S. § 480-D(2), requires the applicant to demonstrate that the proposed project will not cause unreasonable erosion of soil or sediment nor unreasonably inhibit the natural transfer of soil from the terrestrial to the marine or freshwater environment.

Construction will take place from the upland and by barge. Access by land will occur on existing roads, and the proposed new road will be started early in construction to provide an additional route for construction access, material deliveries, and staging. When the site is being accessed by barge, the contractor will avoid the nearby federal navigation

channel and adjacent waterfront facilities during construction activity. Any work within the resource will be conducted in compliance with the standard November 8th-April 9th in-water work window discussed in Finding 4. A certified erosion control contractor will be on site.

The Department finds that the activity will not cause unreasonable erosion of soil or sediment nor unreasonably inhibit the natural transfer of soil from the terrestrial to the marine or freshwater environment.

4. HABITAT CONSIDERATIONS:

The NRPA, in 38 M.R.S. § 480-D(3), requires the applicant to demonstrate that the proposed project will not unreasonably harm significant wildlife habitat, freshwater wetland plant habitat, threatened or endangered plant habitat, aquatic or adjacent upland habitat, travel corridor, freshwater, estuarine or marine fisheries or other aquatic life.

The project site consists of ledge in the upper intertidal, grading to rockweed-covered rocky shore then to mixed coarse and fine sediments. Eelgrass resources were documented in the subtidal near the project area prior to 1997 but have not been mapped in recent years.

In its review, the Department of Marine Resources (DMR) stated that the project as proposed would have direct impacts to marine resources and habitat in the footprint of the pier, and recommended that if piles are driven outside of the winter work window of November 8th-April 9th. The mouth of the Saco River is utilized by diadromous fish species including Atlantic Salmon, alewife, and sea run brook trout. Atlantic and short nose sturgeon may be present year round in this area.. DMR further recommended that the applicant use a vibratory hammer or a bubble screen for noise mitigation.

The applicant concurred that work will only occur during the winter work window.

According to the Department's Geographic Information System (GIS) database there are no mapped Essential or Significant Wildlife Habitats located at the site. The Maine Department of Inland Fisheries and Wildlife (MDIFW) reviewed the proposed project and stated that the project is located adjacent to but outside of Tidal Waterfowl and Wading Bird Habitat (TWWH), a designated Significant Wildlife Habitat. MDIFW stated that minimal impacts to piping plover and Blanding's turtle habitat are anticipated and provided general recommendations including minimizing vegetation removal and soil disturbance, and that time spent in the water should be minimized to the greatest extent practicable.

The applicant responded to these comments, and agreed to minimize vegetation removal, soil disturbance, and time spent in the water.

The Department finds that the activity will not unreasonably harm any significant wildlife habitat, freshwater wetland plant habitat, threatened or endangered plant habitat, aquatic

or adjacent upland habitat, travel corridor, freshwater, estuarine or marine fisheries or other aquatic life provided in-water work is only conducted between November 8th-April 9th of any given year

5. WATER QUALITY CONSIDERATIONS:

The applicant proposes to use lumber treated with chromated copper arsenate (CCA) to construct the pier. To protect water quality, all CCA-treated lumber must be cured on dry land in a manner that exposes all surfaces to the air for 21 days prior to the start of construction.

Provided that CCA-treated lumber is cured as described above, the Department finds that the proposed project will not violate any state water quality law, including those governing the classification of the State's waters.

6. WETLANDS AND WATERBODIES PROTECTION RULES:

The proposed project will result in 84 square feet of direct impacts and 4,784 square feet of indirect impacts to the coastal wetland from the new pier system. The overall cumulative impacts from the existing pier and proposed project will be 100 square feet of direct impacts to the coastal resource and 5,311 square feet of indirect impacts to the coastal resource. Coastal wetlands are wetlands of special significance.

The *Wetlands and Waterbodies Protection Rules*, 06-096 C.M.R. ch. 310 (last amended November 11, 2018), interpret and elaborate on the Natural Resources Protection Act (NRPA) criteria for obtaining a permit. The rules guide the Department in its determination of whether a project's impacts would be unreasonable. A proposed project would generally be found to be unreasonable if it would cause a loss in wetland area, functions and values and there is a practicable alternative to the project that would be less damaging to the environment. Each application for a NRPA permit that involves a coastal wetland alteration must provide an analysis of alternatives in order to demonstrate that a practicable alternative does not exist.

A. Avoidance. An applicant must submit an analysis of whether there is a practicable alternative to the project that would be less damaging to the environment and this analysis is considered by the Department in its assessment of the reasonableness of any impacts. Additionally, for activities proposed in, on, or over wetlands of special significance the activity must be among the types listed in Chapter 310, § 5(A) or a practicable alternative less damaging to the environment is considered to exist and the impact is unreasonable. A pier is a water dependent use and its proposed construction is among the activities specifically provided for in Chapter 310, § 5(A)(1)(c). Additionally, any project related to health and safety is among the activities specifically provided for in Chapter 310, § 5(A)(1)(a).

The applicant submitted an alternatives analysis for the proposed project completed by Site Design Associates and dated June 17, 2024, with a last revision date of December

10, 2024. The purpose of the proposed project is to provide all-tide, year-round access to the resource for research and education operations associated with the Arthur P. Girard Marine Science Center (GMSC) at the University of New England. A secondary project purpose is to provide docking space for the City of Biddeford's fireboat for emergency response and safety. The applicant plans to launch a variety of research vessels from the proposed pier, including a 31-foot long research vessel and potentially larger ones in the future. The City's fireboat is 19 feet long. The applicant considered not building the new pier system and instead utilizing the existing pier on the parcel; however, this existing pier is seasonal, including the floats that are hauled out of the water each winter limiting year-round access that is required to support the a Universities' marine science programs. Additionally, the existing pier does not provide a docking area for the City of Biddeford's fireboat. Therefore, this alternative was rejected. The applicant considered a seasonal gangway and l floats; however, research and access to the water is required for emergency response from the City and for year-round, all-tide access to the resource for educational purposes. Finally, the applicant considered using public facilities including marinas, boat launches and moorings to moor and launch research vessels; however, access to the water can be time-sensitive due to course schedules or the need to access the water during certain tide cycles. With shuttling of staff, students, and equipment, and the lack of reliable parking, this alternative was rejected. The private marinas in the area have long waitlists for private slips and do not have the capacity to handle the frequent use and group size that the University requires to meet their education and research mission

B. Minimal Alteration. In support of an application and to address the analysis of the reasonableness of any impacts of a proposed project, an applicant must demonstrate that the amount of coastal wetland to be altered will be kept to the minimum amount necessary for meeting the overall purpose of the project. During the planning phase of this project, the applicant selected the pier location with the shortest length necessary to reach adequate water depths for all -tide access. In addition, the dimensions of the pier head were reduced from 28-feet wide by 100-feet long to the currently proposed 23-feet wide by 80-feet long to reduce impacts to the coastal resource.

C. Compensation. In accordance with Chapter 310, § 5(C)(6)(b), compensation may be required to achieve the goal of no net loss of coastal wetland functions and values. This project will not result in over 500 square feet of fill in the resource, which is the threshold over which compensation is generally required. Further, the proposed project will not have an adverse impact on marine resources or wildlife habitat as determined by DMR and MDIFW. For these reasons, the Department determined that compensation is not required.

The Department finds that the applicant has avoided and minimized coastal wetland impacts to the greatest extent practicable, and that the proposed project represents the least environmentally damaging alternative that meets the overall purpose of the project.

7. OTHER CONSIDERATIONS:

The Department finds, based on the design, proposed construction methods, and location, the proposed project will not inhibit the natural transfer of soil from the terrestrial to the marine environment, will not interfere with the natural flow of any surface or subsurface waters, and will not cause or increase flooding. The proposed project is not located in a coastal sand dune system, is not a crossing of an outstanding river segment, and does not involve dredge spoils disposal or the transport of dredge spoils by water.

BASED on the above findings of fact, and subject to the conditions listed below, the Department makes the following conclusions pursuant to 38 M.R.S. §§ 480-A–480-JJ and Section 401 of the Clean Water Act (33 U.S.C. § 1341):

A. The proposed activity will not unreasonably interfere with existing scenic, aesthetic, recreational, or navigational uses.

B. The proposed activity will not cause unreasonable erosion of soil or sediment.

C. The proposed activity will not unreasonably inhibit the natural transfer of soil from the terrestrial to the marine or freshwater environment.

D. The proposed activity will not unreasonably harm any significant wildlife habitat, freshwater wetland plant habitat, threatened or endangered plant habitat, aquatic or adjacent upland habitat, travel corridor, freshwater, estuarine, or marine fisheries or other aquatic life provided winter work windows are utilized as described in Finding 3.

E. The proposed activity will not unreasonably interfere with the natural flow of any surface or subsurface waters.

F. The proposed activity will not violate any state water quality law including those governing the classifications of the State's waters provided that CCA-treated lumber is cured as described in Finding 5.

G. The proposed activity will not unreasonably cause or increase the flooding of the alteration area or adjacent properties.

H. The proposed activity is not on or adjacent to a sand dune.

I. The proposed activity is not on an outstanding river segment as noted in 38 M.R.S. § 480-P.

THEREFORE, the Department APPROVES the above noted application of UNIVERSITY OF NEW ENGLAND to construct a research pier as described in Finding 1, SUBJECT TO THE ATTACHED CONDITIONS, and all applicable standards and regulations:

1. Standard Conditions of Approval, a copy attached.

2. The applicant shall take all necessary measures to ensure that their activities or those of their agents do not result in measurable erosion of soil on the site during the construction of the project covered by this approval.

3. Severability. The invalidity or unenforceability of any provision, or part thereof, of this License shall not affect the remainder of the provision or any other provisions. This License shall be construed and enforced in all respects as if such invalid or unenforceable provision or part thereof had been omitted.

4. Construction is only allowed from November 8th-April 9th of any given year.

5. All CCA-treated lumber shall be cured on dry land in a manner that exposes all surfaces to the air for 21 days prior to the start of construction.

THIS APPROVAL DOES NOT CONSTITUTE OR SUBSTITUTE FOR ANY OTHER REQUIRED STATE, FEDERAL OR LOCAL APPROVALS NOR DOES IT VERIFY COMPLIANCE WITH ANY APPLICABLE SHORELAND ZONING ORDINANCES.

DONE AND DATED IN AUGUSTA, MAINE, THIS 11TH DAY OF APRIL, 2025.

DEPARTMENT OF ENVIRONMENTAL PROTECTION

March 28, 2025

Regulatory Division

Andrew Phillippe
University of New England
11 Hills Beach Road
Biddeford, Maine 04005
Via Email: aphilippe@une.edu

Dear Mr. Phillippe:

This letter is in response to the application you submitted to the U.S. Army Corps of Engineers (USACE), New England District on June 21, 2024 for a Department of the Army general permit verification. We have assigned this project file number NAE-2024-01628, which you should reference in all correspondence with this office.

A review of the information provided indicates the proposed work includes the construction of a permanent pier consisting of a 28-foot long by 24-foot-wide landing; a 90-foot long by 14-foot-wide approach pier; and an 80-foot long by 24-foot-long pier. Additionally, your project includes a floating dock system consisting of an 80-foot long by 5-foot-wide gangway; a 30-foot long by 12-foot wide float; a 24-foot long by 8-foot wide float; and a 27-foot long by 8-foot wide float, and a 20-foot long by 6-foot wide float. The project is located in the Saco River; at 11 Hills Beach Road, at Latitude 43.458630º and Longitude -70.389050º; in Biddeford, York County, Maine. The work is shown on the enclosed plans titled “University of New England Marine Science Center Pier”, on 38 sheets, and dated 8/14/2024.

Based on the information you have provided; we verify that the activity is authorized under General Permit *2. Structures, Floats, and Lifts* of the October 14, 2020, federal permit known as the Maine General Permits (GPs). If the extent of the project area and/or nature of the authorized impacts to waters are modified, a revised application must be submitted to this office for written approval before work is initiated. You can find a copy of these permits at:
https://www.nae.usace.army.mil/Missions/Regulatory/State-General-Permits/

Any deviation from the terms and conditions of the permit, or your submitted plans, may subject the permittee to the enforcement provisions of our regulations. Therefore, in the event changes to this project are contemplated, it is recommended you coordinate with this office prior to proceeding with the work. This office must approve any changes before you undertake them. You must perform this work in compliance

with the terms and conditions of the GPs listed above, and also in compliance with the following special conditions:

1. The permittee shall complete and return the enclosed Work-Start Notification Form to this office at least two weeks prior to the anticipated construction start date.

2. The permittee shall complete and return the enclosed Completion Certification Form to this office at least one month following the completion of the authorized work.

3. You must maintain the activity herein in good condition and in conformance with the terms and conditions of this authorization. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with a general condition of these GPs. Should you wish to cease to maintain the authorized activities, or should you desire to abandon it without a good faith transfer, you must obtain a modification of this authorization from this office, which may require restoration of the area.

4. All construction shall be completed in accordance with the limits of construction and construction sequences detailed on the enclosed plan drawings, titled “University of New England Marine Science Center Pier,” on a total of 38 sheets, and dated 8/14/2024. If you change the plans or construction methods for work within or adjacent to the Saco River, please contact us immediately to discuss modification of this authorization. The USACE must approve any changes before you undertake them.

5. A “soft start” is required to allow animals an opportunity to leave the project vicinity before sound pressure levels increase. In addition to using a soft start at the beginning of the workday for pile driving, one must also be used at any time following cessation of pile driving for a period of 30 minutes or longer.

a) For impact pile driving: Pile driving will commence with an initial set of three strikes by the hammer at 40% energy, followed by a one-minute wait period, then two subsequent 3-strike sets at 40% energy, with one-minute waiting periods, before initiating continuous impact driving.

b) For vibratory pile installation: Pile driving will be initiated for 15 seconds at reduced energy followed by a one-minute waiting period. This sequence of 15 seconds of reduced energy driving, one-minute waiting period will be repeated two additional times, followed immediately by pile-driving at full rate and energy.

6. The work authorized herein shall not be conducted during the time of year (TOY) restriction of April 10 to November 7 in order to minimize adverse impacts to the Atlantic sturgeon, shortnose sturgeon.

This verification is valid until October 14, 2025. You must commence or be under contract to commence the work authorized herein by October 14, 2025 and complete

the work by October 14, 2026. If not, you must contact this office to determine the need for further authorization before beginning or continuing the activity. It is recommended that you contact this office before this authorization expires to discuss if permit reissuance is a possibility.

This GP verification and any associated authorizations does not preclude the necessity to obtain any other federal, state, or local permits, licenses, and/or certifications, which may be required.

If you have any questions related to this verification or have issues accessing documents referenced in this letter, please contact Jana Jacobson, Project Manager at (207) 233-2117, or by email at Jana.L.Jacobson@usace.army.mil. This agency continually strives to improve our customer service. To better serve you, please complete the Customer Service Survey located at: https://regulatory.ops.usace.army.mil/customer-service-survey/.

Sincerely,

Jon T. Coleman

Project: MHPC# 0500-23 University of New England; 11 Hills Beach Road
Permanent Pier and Float System

Town: Biddeford, ME

Dear Mr. Saucier:

In response to your recent request, I have reviewed the information received April 13, 2023 to initiate consultation on the above referenced projects in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended (NHPA).

Dr. Arthur Spiess of my staff has carefully reviewed our February 7, 2000 letter concerning areas of archaeological site significance on the UNE campus, and the Phase III report that formed the background of these recommendations. We note that some of the areas of the proposed access road and the head of the pier fall outside of the areas found not to be contributing to the overall significance of the archaeological site(s) on the UNE campus (specifically areas 99.1, 99.2 and 99.8. Moreover, the intensity of previous archaeological testing along the now-proposed access road (especially within area 99.1).

Based on the information submitted, I have concluded that the proposed work will have **no adverse effect** upon historic properties.

However, our finding is *conditional* upon the following:

1) We recommend that one or more archaeologists monitor the initial clearing of soil from the route of the access road and be allowed enough time to recover information from any subsoil features that are present. It would be most important to monitor the access road from the curve in the road to be located just east of the north wall of the marine science center to the head of the proposed pier.

Please contact Megan M. Rideout at (207) 287-2992 or megan.m.rideout@maine.gov if we can be of further assistance in this matter.

Sincerely,

Kirk F. Mohney

Notice to Proceed
With External Reviews

City of Biddeford, Maine

The Office of
City Manager
James A. Bennett
Email: james.bennett@biddefordmaine.org

August 19, 2024

University of New England
11 Hills Beach Road
Biddeford, Maine 04005

Attention: Mr. Alan Thibeault, VP of University Operations

RE: Notice to Proceed with External Reviews

Dear Mr. Thibeault,

On August 9, 2024, I received written clarification from Mr. Wayne Duffett, PE of TECAssociates that UNE's proposed Research Pier and Float System has complied with City Code 74-35 subsections (c) 1-10. Those sections are as follows:

(1) A formal boundary survey that has been documented at the Registry of Deeds.
(2) A copy of the boundary survey showing the littoral zone, established by extending property lines seaward.
(3) A location map from a portion of a USGS topographic map or coastal chart.
(4) Distance to navigable channels or any federal navigation project.
(5) Mean high- and low-water boundary.
(6) A plan view on the drawing(s) that shows the location and dimensions of the applicant's structure(s) in relation to the applicant's property lines.
(7) A typical cross section/side view of the applicant's structures on the drawing(s).
(8) Evidence that owners of abutting properties have been notified of the applicant's intended project.
(9) Evidence that the 1) Maine Historic Preservation Commission, 2) Aroostook Band of Micmac, 3) Passamaquoddy Tribe of Indians: Pleasant Point; Indian Township, 4) Houlton Band of Maliseet Indians, and 5) Penobscot Indian Nation have been notified of the applicant's intended project.
(10) Completed applications to the Army Corps of Engineers, Department of Environmental Protection and Biddeford Code Enforcement. A regulatory permit from the Saco River Corridor Commission may also be required in some instances.

Based on this information and in harmony with my earlier communications, please consider this as formal notification from the City of Biddeford that the application has been found in compliance with

the above mention City Code. That finding allows the application to proceed in the next steps of the review process; namely formal review by all agencies except those that are part of the City of Biddeford. After each and all of those processes are complete, the City will move forward with the final review(s) by agents and Committees of the City.

While I don't believe it is necessary, let me empathically state that this communication does not in any form, imply that the City has in any way made a determination that the location submitted has been approved. Said approval will considered after completion of all process and in compliance with applicable laws, regulations. This includes all local ordinances.

Please feel free to reach out to me if you have any questions

Sincerely,

James A. Bennett
City Manager

CATALOG #:

FEATURES

- Decorative transitional style lighting fixture series is suitable for walkway lighting and wall mounting
- Two unique shade and style options
- LED turtle-friendly option available
- Integral Surge and Thermal Protection

Shown with arm

C US

*3000K and warmer CCTs only

CONTROL TECHNOLOGY

energeni

SPECIFICATIONS

CONSTRUCTION
- The drivers shall be located in the top cast housing and shall be accessible without tools by hinging the lower shade assembly. The driver and all electrical components shall be on a tray
- The lower shade shall be made from a one-piece aluminum spinning
- The housing is designed for LED thermal management without the use of metallic screens, cages, or fans. The top casting shall be able to be pendent mounted in place with a stainless steel safety pin and then permanently held in place with four stainless steel bolts

ELECTRICAL
- 100V through 277V, 50 Hz to 60 Hz (UNV), or 347V or 480V input
- Power factor is ≥0.90 at full load
- Dimming drivers are standard with connections for external dimming equipment available upon request
- Component-to-component wiring within the luminaire may carry no more than 80% of rated load and is listed by UL for use at 600VAC at 50°C or higher
- Plug disconnects are listed by UL for use at 600 VAC, 13A or higher. 13A rating applies to primary (AC) side only
- Fixture electrical compartment shall contain all LED driver components
- Button photocell available
- Ambient operating temperature -40°C to 40°C

ELECTRICAL (CONTINUED)
- Surge protection - 20KA
- Lifeshield™ Circuit - protects luminaire from excessive temperature. The device shall activate at a specific, factory-preset temperature, and progressively reduce power over a finite temperature range. A luminaire equipped with the device may be reliably operated in any ambient temperature up to 55°C (131°F). Operation shall be smooth and undetectable to the eye. Thermal circuit is designed to “fail on”, allowing the luminaire to revert to full power in the event of an interruption of its power supply, or faulty wiring connection to the drivers. The device shall be able to co-exist with other 0-10V control devices (occupancy sensors, external dimmers, etc.)

CONTROLS
- Available with Energeni for optional set dimming, timed dimming with simple delay, or timed dimming based on time of night visit

FINISH
- IFS polyester powder-coat electrostatically applied and thermocured
- IFS finish consists of a five stage pretreatment regimen with a polymer primer sealer and top coated with a thermoset super TGIC polyester powder coat finish
- The finish meets the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pounds

CERTIFICATIONS
- NRTL Certified, UL8750, UL 1598 and CSA22.2#250. 13-14 for wet locations
- IDA approved
- This product is approved by the Florida Fish and Wildlife Conservation Commission. Separate spec available.

WARRANTY
- 5 year warranty

URBAN LUMINAIRE

PROJECTED LUMEN MAINTENANCE

Ambient Temperature	OPERATING HOURS					
	0	25,000	*TM-21-11 36,000	50,000	100,000	L70 (Hours)
25°C / 77°F	1.00	0.97	0.96	0.95	0.91	408,000
40°C / 104°F	0.99	0.96	0.95	0.94	0.89	356,000

Notes:

* Projected per IESNA TM-21-11. Data references the extrapolated performance projections for thebase model in a 40°C ambient, based on 10,000 hours of LED testing per IESNA LM-80-08.

LUMINAIRE AMBIENT TEMPERATURE FACTOR (LATF)

Ambient Temperature		Lumen Multiplier
0°C	32°F	1.03
10°C	50°F	1.01
20°C	68°F	1.00
25°C	77°F	1.00
30°C	86°F	0.99
40°C	104°F	0.98
50°C	122°F	0.97

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

DATE: LOCATION:

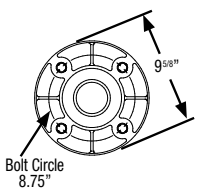
TYPE: PROJECT:

CATALOG #:

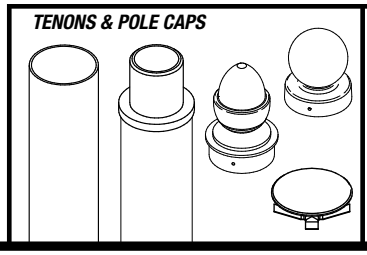
RSA-B-KENS Series Poles

ROUND STRAIGHT ALUMINUM

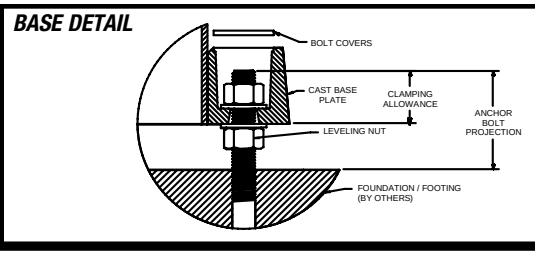
APPLICATIONS



- Lighting installations for side and top mounting of luminaires with effective projected area (EPA) not exceeding maximum allowable loading of the specified pole in its installed geographic location



CONSTRUCTION



- SHAFT: One-piece straight aluminum with fluted or smooth cross section; Extruded shafts of 6061-T6 aluminum in 1/8", 3/16", or 1/4" thickness. Decorative base of 356 cast aluminum.
- POLE CAP OR FINALS: Cap or decorative finials available for side mounted luminaires. Open top or tenons provided for post top mounted luminaires.
- HAND HOLE: Hand hole provided in cast base; Mounting provisions for grounding lug located behind cover
- ANCHOR BOLTS: Four galvanized anchor bolts provided per pole with minimum yield of 55,000 psi (ASTM F1554). Galvanized hardware with two washers and two nuts per bolt for leveling

FINISH

- Durable thermoset polyester powder coat paint finish with nominal 3.0 mil thickness
- Powder paint finish coat available in twelve standard colors; Custom colors available; RAL number preferable.

ORDERING EXAMPLE:

RSA-B-KENS - S/F - 16 - 40 - A/B/C - 2L - B3 - DBT - VM2

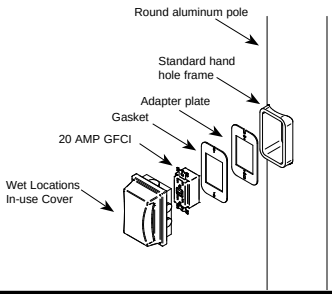
NOTE Factory supplied template must be used when setting anchor bolts. Current will deny any claim for incorrect anchorage placement resulting from failure to use factory supplied template and anchor bolts.

EHH - EXTRA HANDHOLE

C05 - C07 - C20 - COUPLING



VM2 - VIBRATION DAMPER 2ND MODE

Factory installed, internal damper designed to alter pole resonance to reduce movement and material fatigue caused by 2nd mode vibration.

GFI – 20 AMP GFCI RECEPTACLE & COVER

OPTION ORIENTATION

Follow the logic below when ordering location specific options. For each option, include its orientation (in degrees) and its height (in feet). Example: Option C07 should be ordered as: **RSA-B-KENS-F16-40B-TN3-DBT-C05-0-5** (.5" coupling on the handhole/arm side of pole, 15 feet up from the pole base) 1' spacing required between option. Consult factory for other configurations.

VM2SXX - VIBRATION DAMPER 2ND MODE

Field installed, internal damper designed to alter pole resonance to reduce movement and material fatigue caused by 2nd mode vibration.

VM2S08 – 8'
VM2S12 – 12'
VM2S16 – 16'
VM2S20 – 20'
VM2S24 – 24'

For more information about pole vibration and vibration dampers, please consult Pole Vibration Application Guide.

NOTES

Wind-speed Website disclaimer:
Current has no connection to the linked website and makes no representations as to its accuracy. While the information presented on this third-party website provides a useful starting point for analyzing wind conditions, Current has not verified any of the information on this third party website and assumes no responsibility or liability for its accuracy. The material presented in the windspeed website should not be used or relied upon for any specific application without competent examination and verification of its accuracy, suitability and applicability by engineers or other licensed professionals. Current does not intend that the use of this information replace the sound judgment of such competent professionals, having experience and knowledge in the field of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the results of the windspeed report provided by this website. Users of the information from this third party website assume all liability arising from such use. Use of the output of these referenced websites do not imply approval by the governing building code bodies responsible for building code approval and interpretation for the building site described by latitude/longitude location in the windspeed report. http://windspeed.atcouncil.org

- Allowable EPA, to determine max pole loading weight, multiply allowable EPA by 30 lbs.
- The tables for allowable pole EPA are based on the ASCE 7-05 Wind Map or the Florida Region Wind Map for the 2010 Florida Building Code. The Wind Maps are intended only as a general guide and cannot be used in conjunction with other maps. Always consult local authorities to determine maximum wind velocities, gusting and unique wind conditions for each specific application
- Allowable pole EPA for jobsite wind conditions must be equal to or greater than the total EPA for fixtures, arms, and accessories to be assembled to the pole. Responsibility lies with the specifier for correct pole selection. Installation of poles without luminaires or attachment of any unauthorized accessories to poles is discouraged and shall void the manufacturer's warranty
- Wind speeds and listed EPAs are for ground mounted installations. Poles mounted on structures (such as bridges and buildings) must consider vibration and coefficient of height factors beyond this general guide; Consult local and federal standards
- Wind Induced Vibration brought on by steady, unidirectional winds and other unpredictable aerodynamic forces are not included in wind velocity ratings. Consult Pole Vibration Application Guide for environmental risk factors and design considerations.
- Extreme Wind Events like, Hurricanes, Typhoons, Cyclones, or Tornadoes may expose poles to flying debris, wind shear or other detrimental effects not included in wind velocity ratings

Due to our continued efforts to improve our products, product specifications are subject to change without notice.

Construction: All cast aluminum parts shall be low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal.

EPA (effective projected area): EPA is de¬fined as (projected surface area X drag factor) and measured in ft2. Allowable post, luminaire arm, luminaire and accessory EPAs are derived from the most current published AASHTO (American Association of State Highway and Transportation Officials) standard, currently AASHTO 2001 (50yr design life). Customer assumes all responsibility for selecting the ap¬propriate post for installation (consult factory for assistance). Luminaire arm, luminaire and accessory EPA must be equal to or less than allowable EPA of post. Consult a professional engineer for compliance with local codes and standards.

Fasteners: All fasteners shall be Corrosion Resistant. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost).

Finish: Finish shall be a Beacote V polyester powder-coat electro-statically applied and thermocured. Beacote V finish shall consist of a five stage iron phosphate chemical pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester pow¬der coat finish. The finish shall meet the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pound.

Limited Warranty: Beacon Products warrants its products, to the original purchaser, against defects in materials and workmanship for proper usage for a period of 5 years after date of production, when properly installed, maintained and appropriately specified. See Warranty Information on www.beaconproducts.com for complete details and exclusions.

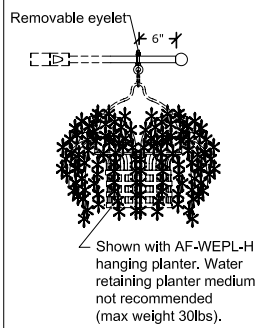
Specifications

Construction:
All cast aluminum parts shall low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal.

Fasteners:
All fasteners shall be stainless steel. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost), consult factory for availability.



Finish:
Finish shall be Beacote III polyester powdercoat electrostatically applied and thermocured. Poles shall be subjected to chemical pre-treatment prior to painting by immersion process.

Options

Breakaway Coupler System

breakaway speed varies with banner size (consult factory)

Planter Eyelet

BLS - Black Gloss Smooth

Construction: All cast aluminum parts shall be low copper alloy A356. All extruded aluminum parts shall be alloy 6061-T6, 6063-T5 or equal. Standard fluted shaft profile shall be 16-flat flutes for 3"OD and 12-flat flutes for 4", 5", & 6"OD.

Base Covers: require specification of smooth or fluted shafts of the size required to meet wind load requirements

Vibration Dampeners: Vibration dampener pads shall be provided when required by customer or deemed necessary by Beacon Products. Please consult factory for bridge mounted applications.

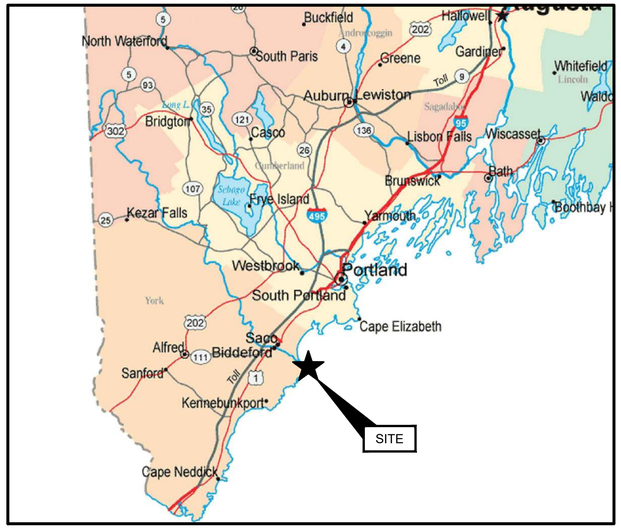
EPA (effective projected area): EPA is defined as (projected surface area X drag factor) and measured in ft2. Allowable post, luminaire arm, luminaire and accessory EPAs are derived from the most current published AASHTO (American Association of State Highway and Transportation Officials) standard, currently AASHTO 2001 (50yr design life). Customer assumes all responsibility for selecting the appropriate post for installation (consult factory for assistance). Luminaire arm, luminaire and accessory EPA must be equal to or less than allowable EPA of post. Consult a professional engineer for compliance with local codes and standards.

Anchor Bolt: Anchor bolts, sized as required, double hex nuts and flat washers shall be hot dipped galvanized steel. A bolt circle template shall be provided for installation.

Fasteners: All fasteners shall be Corrosion Resistant. When tamper resistant fasteners are required, spanner HD (snake eye) style shall be provided (special tool required, available at additional cost).

Finish: Finish shall be a Beacote V polyester powdercoat electrostatically applied and thermocured. Beacote V finish shall consist of a five stage iron phosphate chemical pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester powder coat finish. The finish shall meet the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pound.

Limited Warranty: Beacon Products warrants its products, to the original purchaser, against defects in materials and workmanship for proper usage for a period of 5 years after date of production, when properly installed, maintained and appropriately specified.



Due to our continued efforts to improve our products, product specifications are subject to change without notice.

SHEET NO.
1 OF 39

COORDINATION OF WORK:

1. THE CONTRACTOR SHALL SCHEDULE ALL ACTIVITIES SO AS TO LIMIT IMPACT TO MARINE AND LANDSIDE USES.
2. WORK SHALL BE COORDINATED WITH THE OWNER AND THEIR REPRESENTATIVES:

UNE:A:A:A:	ANDREW PHILIPPE	207-602-2365 (OFFICE)	207-400-6166 (CELL)
GEI:A:A:B:	DANIEL BANNON	207-347-2372 (OFFICE)	207-671-2583 (CELL)
SDA:A:A:C:	TOM SAUCIER	207-449-4275	

3. WORK IS SUBJECT TO THE FOLLOWING TIME OF YEAR AND TIMING OF ACTIVITY RESTRICTIONS:
   - TO BE DEFINED UPON PERMIT APPROVAL.
4. CONTRACTOR ACCESS TO THE SITE BY WATER SHALL AT NO TIME IMPACT USE OF THE ADJACENT FEDERAL NAVIGATION CHANNEL.
5. THE OWNER WILL PERMIT THE CONTRACTOR TO HAVE A LAYDOWN AREA ON THE UPLAND PROPERTY FOR USE DURING CONSTRUCTION. AN APPROXIMATE LAYDOWN AREA IS SHOWN ON SHEET C-005. THE FINAL LOCATION AND DIMENSIONS OF THE LAYDOWN AREA SHALL BE APPROVED BY THE OWNER.

SITE ENVIRONMENTAL CONTROLS:

1. ALL WORK SHALL BE PERFORMED IN COMPLIANCE WITH CITY, STATE, AND FEDERAL PERMITS. COPIES OF PERMIT APPROVALS ARE PROVIDED IN THE PROJECT MANUAL.

OSHA REQUIREMENTS:

1. PURSUANT TO 26 M.R.S.A. §565, THE CONTRACTOR SHALL ADHERE TO THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS AS PROMULGATED BY THE FEDERAL OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AT 29-CFR PART 1926 AS MOST RECENTLY AMENDED.

EROSION CONTROL:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
7. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
8. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

SITE PREPARATION:

1. CONTRACTOR SHALL INSTALL ALL SIGNAGE PRIOR TO INITIATION OF CONSTRUCTION ACTIVITIES. INCLUDE OWNER PROJECT SIGNAGE AND FEDERAL AND STATE MANDATED WORK PLACE SIGNAGE.
2. CONTRACTOR SHALL HAVE IN-PLACE TRASH AND SANITARY FACILITIES FOR THE WORK PLACE.
3. DISCOVERY OF INCONSISTENT SITE INFORMATION OR CONDITIONS ARE TO BE IMMEDIATELY CONVEYED TO THE OWNER AND ENGINEER PRIOR TO COMMENCING OR CONTINUING CONSTRUCTION.
4. THE CONTRACTOR SHALL NOTIFY DIG SAFE PRIOR TO COMMENCING ANY WORK.
5. LOCATIONS OF EXISTING UTILITIES SHOWN ARE APPROXIMATE. THE CONTRACTOR SHALL VERIFY LOCATIONS OF UTILITIES AS MAY BE REQUIRED. THE CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES OCCURRING AS A RESULT OF THE CONTRACTOR'S FAILURE TO LOCATE AND PROTECT UNDERGROUND UTILITIES. ALL REPAIRS SHALL BE MADE AT THE CONTRACTOR'S EXPENSE.
6. CONTRACTOR SHALL MAINTAIN AND PROTECT ALL EXISTING UTILITIES AND DRAINAGE AT ALL TIMES. THE CONTRACTOR SHALL REPAIR ANY DAMAGE AND RESTORE TO THE PRE-EXISTING CONDITION AT NO COST TO THE OWNER.
7. CONTRACTOR SHALL PROTECT ALL EXISTING STRUCTURES AND SHALL PERFORM THE WORK IN A MANNER THAT AVOIDS DAMAGE TO EXISTING STRUCTURES. STRUCTURES INCLUDE, BUT ARE NOT LIMITED TO, BUILDINGS, PIERS, BULKHEADS, FLOATS, PIER UTILITIES AND FIXTURES, AND RIPRAP SLOPES. CONTRACTOR SHALL REPAIR ANY DAMAGE AT NO ADDITIONAL COST TO THE CITY.
8. CONTRACTOR SHALL SUPPLY ALL NECESSARY TEMPORARY UTILITIES FOR CONSTRUCTION INCLUDING, BUT NOT LIMITED TO; WATER, POWER, LIGHTING, DATA, AND TELEPHONE.
9. CONTRACTOR SHALL READ AND UNDERSTAND ALL REGULATORY CONDITIONS ASSOCIATED WITH THE PROJECT AND SHALL COMPLY WITH ALL ENVIRONMENTAL REQUIREMENTS AND PERMIT CONDITIONS.
10. CONTRACTOR SHALL PROVIDE A CONFINED CONCRETE TRUCK WASHDOWN AREA AT A LOCATION TO BE APPROVED BY THE ENGINEER. WASHDOWN AREA SHALL INCLUDE PROTECTION TO PAVEMENT, A PERIMETER WALL AND A FILTER FABRIC LINER. NO RUNOFF CONTAINING CEMENT OR OTHER SUSPENDED SOLIDS WILL BE PERMITTED. ALL MATERIALS SHALL BE COMPLETELY REMOVED UPON COMPLETION OF CONSTRUCTION AND DISPOSED OF AT AN APPROVED DISPOSAL LOCATION.

CODES:

1. MAINE DOT STANDARD SPECIFICATIONS, MARCH 2020 ED. WITH SUPPLEMENTAL SPECIFICATIONS THROUGH JUNE 16,2023.
2. MAINE UNIFORM BUILDING AND ENERGY CODE (MUBEC).
3. AMERICAN CONCRETE INSTITUTE (ACI) 318-14: BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE, 2014 ED.
4. CONCRETE REINFORCING STEEL INSTITUTE (CRSI):
5. AMERICAN INSTITUTE FOR STEEL CONSTRUCTION (AISC) STEEL CONSTRUCTION MANUAL, 15TH ED.
6. ALUMINUM ASSOCIATION, ALUMINUM DESIGN MANUAL, 2015 ED.
7. AMERICAN WOOD COUNCIL, NATIONAL DESIGN SPECIFICATIONS (NDS) FOR WOOD CONSTRUCTION, 2015 ED.

SITE CONTROL AND BASELINES:

1. PROJECT BASE PLAN HAS BEEN DEVELOPED FROM A COMPILATION OF MULTIPLE SURVEYS AS DESCRIBED UNDER "SURVEY AND PROPERTY NOTES".
2. ELEVATIONS ARE PROVIDED IN NAVD88 VERTICAL DATUM UNLESS OTHERWISE NOTED.
3. THE CONTRACTOR SHALL INSTALL SURVEY CONTROL AS NECESSARY TO PERFORM THE WORK. PERMANENT SURVEY CONTROL (AT LEAST 2 POINTS) SHALL BE ESTABLISHED FOR THE PROJECT AND PROTECTED FROM DAMAGE DURING CONSTRUCTION AND PROVIDED ON AS-BUILT DRAWINGS.
4. THE CONTRACTOR SHALL ESTABLISH AND MAINTAIN PROJECT BASELINES AND CONTROL AS REQUIRED TO ENSURE ACCURATE LOCATION OF ALL ELEMENTS OF THE PROJECT.

SURVEY AND PROPERTY NOTES:

1. LOCUS PARCEL IS DEPICTED ON CITY OF BIDDEFORD, TAX MAP 52, LOT 4 AND IS LOCATED IN THE INSTITUTIONAL (IN) ZONE. A PORTION OF THE SITE IS LOCATED IN THE LIMITED RESIDENTIAL (LR) SHORELAND OVERLAY DISTRICT.
2. THE RECORD OWNER IS THE UNIVERSITY OF NEW ENGLAND, BY DEED DATED APRIL 18, 1962, RECORDED IN THE YORK COUNTY REGISTRY OF DEEDS IN BOOK 1484, PAGE 0145.
3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM AND CONTROL POINTS PROVIDED BY UNE.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

CONCRETE

1. CAST IN PLACE CONCRETE SHALL CONFORM TO THE FOLLOWING SPECIFICATIONS BASED ON THE MAINE DOT STANDARD SPECIFICATION:

LOCATION	MDOT CLASS	f'c
ALL CONCRETE	CLASS LP	5,000 PSI

2. ALL REINFORCEMENT SHALL BE NEW DEFORMED BARS, GRADE 60 CONFORMING TO ASTM A615, HOT DIP GALVANIZED ACCORDING TO ASTM A767/A767M OR ASTM A1094/A1094M.
3. REINFORCEMENT ACCESSORIES SHALL BE DIELECTRIC COATED STEEL OR APPROVED PLASTIC.
3. GROUT SHALL BE A HIGH STRENGTH, NON-SHRINK GROUT WITH SALT WATER RESISTANCE.
4. CONCRETE COVER SHALL BE A MINIMUM OF 3 INCHES UNLESS NOTED OTHERWISE.
5. ALL EXPOSED EDGES OF CONCRETE AT COLD JOINTS SHALL HAVE A ROUGHENED FINISH AND BE COATED WITH EPOXY BONDING AGENT PRIOR TO CASTING ADJACENT POUR.
6. PROVIDE 1 INCH CHAMFER ON ALL EXPOSED EDGES UNLESS NOTED OR DIRECTED OTHERWISE.
7. TOP SURFACE OF EXPOSED CONCRETE SHALL RECEIVE A BROOM FINISH.
8. COAT FINISHED SURFACES OF CONCRETE WITH A 100% SILANE PENETRATING CONCRETE SEALER SUITABLE FOR USE IN A MARINE ENVIRONMENT. SEALER SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.
9. REINFORCEMENT DEVELOPMENT AND LAP SPLICE LENGTHS SHALL BE IN ACCORDANCE WITH ACI 318.
10. CONCRETE MIX DESIGN SHALL INCLUDE THE USE OF CORROSION INHIBITING ADMIXTURE AT DOSAGE SUITABLE FOR USE IN AN AGGRESSIVE MARINE ENVIRONMENT. CORROSION INHIBITOR SHALL BE LISTED ON THE MAINE DOT QUALIFIED PRODUCTS LIST.

EPOXY ANCHORS

1. ANCHOR ROD, WASHERS, AND NUTS SHALL CONFORM TO ASTM F1554, GRADE 36, AND SHALL BE HOT DIP GALVANIZED.
2. THE MINIMUM EDGE DISTANCE AND MINIMUM SPACING FOR ALL ANCHORS SHALL BE 6 BOLT DIAMETERS.
3. ALL HOLES SHALL BE DRILLED TO THE RECOMMENDED DIAMETER PER MANUFACTURERS REQUIREMENTS USING CARBIDE DRILL BITS MEETING ANSI B212.5-1994.
4. HOLES SHALL BE BRUSHED WITH NYLON BRUSH AND BLOWN CLEAN USING OIL-FREE COMPRESSED AIR A MINIMUM OF TWO TIMES.
5. ALL HOLES SHALL BE FREE OF STANDING WATER BEFORE INSTALLING ANCHORS.
6. EPOXY SHALL HAVE MINIMUM BOND STRENGTH OF 1,600 PSI @ 14 DAYS.

EARTHWORK

1. EARTHWORK MATERIALS SHALL MEET THE FOLLOWING SPECIFICATIONS:

AGGREGATE BASE	TYPE A (MDOT 703.06A)
AGGREGATE SUBBASE	TYPE D (MDOT 703.06C)
WALL BACKFILL	CRUSHED STONE $\frac{3}{4}$" (MDOT 703.13)
DRAINAGE STONE	CRUSHED STONE 2 INCH (MDOT 703.31)
ORDINARY BORROW	SEE #2 BELOW.

2. ORDINARY BORROW SHALL BE EXISTING GRANULAR SOIL WITH MAXIMUM 4 INCH STONE SUBJECT TO APPROVAL BY THE ENGINEER. ALL DEBRIS OR OTHER DELETERIOUS MATERIALS SHALL BE REMOVED FROM ORDINARY BORROW PRIOR TO REUSE.

STEEL

1. STEEL ANGLE, STRAPS, AND MISCELLANEOUS FABRICATIONS SHALL BE ASTM A36 HOT DIP GALVANIZED AFTER FABRICATION, UNLESS OTHERWISE NOTED.
2. ALL FASTENERS SHALL BE HOT-DIP GALVANIZED OR STAINLESS STEEL.
3. ALL BOLTS SHALL CONFORM TO ASTM A307. MINIMUM SIZE SHALL BE $\frac{5}{8}$ INCH UNLESS OTHERWISE NOTED.

HEAVY TIMBER

1. UNLESS OTHERWISE SPECIFIED, ALL TIMBER FRAMING TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NDS 2015.
2. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS UNLESS OTHERWISE NOTED.
3. ALL NEW SOUTHERN YELLOW PINE TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.60 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
4. ALL EXPOSED EDGES SHALL BE PLANED OR SANDED TO PROVIDE SMOOTH SURFACE FREE OF ROUGH EDGES OR DEFECTS.
5. ALL EXPOSED FASTENERS SHALL BE COUNTERSUNK.
6. DOCK WASHERS SHALL BE PROVIDED BENEATH NUT OR BOLT HEAD OF ALL TIMBER BOLTED CONNECTIONS. TIMBER BOLTS SHALL BE CONSIDERED AN ACCEPTABLE ALTERNATIVE TO HEX HEADED BOLTS WITH DOCK WASHERS.
7. STANDARD WASHERS SHALL BE PERMISSIBLE WHERE CONNECTED PARTS INCLUDE STEEL PLATES, ANGLES, BRACKETS, OR BACKER PLATES.

TIMBER PILES

1. TIMBER PILES SHALL BE TROPICAL GREENHEART AND SHALL CONFORM TO ASTM D25.
2. PROVIDE PROTECTION TO PILE TIP AND BUTT TO AVOID DAMAGE DURING DRIVING.
3. PILES SHALL BE ORDERED MINIMUM 5 FT LONGER THAN TABULATED LENGTHS TO ALLOW FOR INSTALLATION VARIABILITY AND CUTOFF.
4. ALL TIMBER PILES SHALL BE DRIVEN TO THE MINIMUM EMBEDMENT OR CAPACITY CRITERIA INDICATED IN THE PILE SCHEDULE. FENDER PILES MAY BE INSTALLED TO THE REQUIRED DEPTH USING A VIBRATORY HAMMER. IN THE EVENT THAT A VIBRATORY HAMMER IS UNABLE TO ACHIEVE THE MINIMUM REQUIRED EMBEDMENT, THE CONTRACTOR WILL BE RESPONSIBLE FOR COMPLETING FINAL SET USING AN IMPACT HAMMER.
5. GREENHEART PILES SHALL BE BANDED WITH 1½ INCH STAINLESS STEEL UTILITY STRAPPING PRIOR TO CUTOFF. REFER TO DETAIL ON SHEET S-009.

ASPHALT

1. PAVING GRADES SHALL PITCH TO EXISTING STRUCTURES.
2. PAVEMENT SHALL CONSIST OF 4" OF HOT MIX ASPHALT PLACED IN TWO COURSES, SEE DETAIL.
3. CONTRACTOR TO SAW CUT PAVEMENT AT LIMIT OF REMOVAL.
4. CONTRACTOR TO PROVIDE SMOOTH TRANSITIONS BETWEEN NEW AND EXISTING ASPHALT.
5. CONTRACTOR TO SEAL JOINT BETWEEN NEW AND EXISTING ASPHALT WITH BITUMINOUS JOINT SEALANT.

GEOTEXTILE

1. GEOTEXTILE SEPARATION FABRIC SHALL BE MIRAFI FW700 OR EQUIVALENT.
2. OVERLAP ALL SEAMS MINIMUM 2 FT.
3. INSTALL PER MANUFACTURERS RECOMMENDATIONS.

STEEL PIPE PILES

1. STEEL PIPE PILES SHALL CONFORM TO ASTM A252, GRADE 3.
2. ALL PILES SHALL BE SEAMLESS.
3. AN OPEN CUTTING SHOE IS REQUIRED.
4. PIPE PILES SHALL BE COATED WITH FUSION BONDED EPOXY, COLOR BROWN. MINIMUM COATING THICKNESS SHALL BE 18-20 MIL. COATING SHALL EXTEND FROM TOP OF PILE DOWN TO MINIMUM 5-FEET BELOW GRADE.
5. DAMAGE TO ANY STEEL COATING SHALL BE TOUCHED UP BY THE CONTRACTOR USING APPROVED MATERIALS AND METHODS.
6. ALL PILES SHALL BE FILLED TO THE TOP WITH CONCRETE AFTER INSTALLATION. ROCK-SOCKETED PILES SHALL BE CLEANED OUT AND FILLED FOR THEIR ENTIRE LENGTH PRIOR TO CONCRETE FILLING. DRIVEN PILES SHALL BE CLEANED OUT TO MINIMUM 10-FEET BELOW ADJACENT MUDLINE.
7. REFER TO PILE SCHEDULE ON SHEET S-005 FOR ESTIMATED PILE LENGTHS, COATING LENGTHS, SIZES, AND SOCKETING REQUIREMENTS.

TIMBER FLOATS

1. FLOAT MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF FLOAT FRAMING AND DRUM LAYOUT TO MEET BOUYANCY, LOADING, AND ENVIRONMENTAL EXPOSURE REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. UNLESS OTHERWISE SPECIFIED, ALL TIMBER TO BE USED SHALL BE NO. 1 AND BETTER SOUTHERN PINE AS GRADED BY SPIB AND WITH DESIGN VALUES PER NFPA NATIONAL DESIGN SPECIFICATION OR THE EQUIVALENT FOR DOUGLAS FIR AS GRADED BY WCLIB AND WWPA.
3. ALL TIMBER SHALL BE NEW AND SUPPLIED WITH NOMINAL DIMENSIONS.
4. ALL TIMBER MEMBERS TO WHICH THE PUBLIC MAY BE EXPOSED SHALL BE TREATED WITH ALKALINE COPPER QUATERNARY (ACQ) IN ACCORDANCE WITH AWPA & AWPB W/ MINIMUM RETENTION OF 0.40 LBS. PER CUBIC FOOT. ALL OTHER SOUTHERN YELLOW PINE MEMBERS SHALL BE CCA TREATED TO 2.5 PCF RETENTION.
5. DECKING SHALL BE NO. 1 SOUTHERN PINE, MINIMUM SIZE 2X6.
6. MISC. HARDWARE: GALVANIZED STEEL PLATES AND ALL BOLTS AND RELATED HARDWARE SHALL BE FASHIONED FROM STEEL AND GALVANIZED AFTER FABRICATION AND IN ACCORDANCE WITH REQUIREMENTS OF ASTM A123, AND/OR A153. BOLTS AND NUTS SHALL CONFORM TO ASTM A307.
7. CONNECTION HARDWARE SHALL BE FABRICATED FROM ASTM-A36 GRADE STEEL WITH MINIMUM THICKNESS ¼".
8. PROVIDE GUIDE/WEARING BRACKETS AT GANGWAY LANDING ON FLOAT 'C' PER DETAIL A ON SHEET S-012. BRACKETS SHALL BE LOCATED IN FIELD TO BE CENTERED ON GANGWAY RANGE OF TRAVEL AT MID-TIDE ELEVATION.
9. TRANSITIONS BETWEEN FLOATING DOCKS SHALL INCLUDE ADA COMPLIANT TRANSITION PLATES ACROSS GAPS AT HINGE LOCATIONS.
10. FLOATING DOCKS SHALL MEET THE FOLLOWING LOADING AND FREEBOARD CRITERIA:

DEAD LOAD	20 INCH FREEBOARD
20 PSF UNIFORM LIVE LOAD	MINIMUM 8 INCH FREEBOARD
40 PSF UNIFORM LIVE LOAD	MINIMUM ZERO FREEBOARD

DEAD LOADS SHALL INCLUDE ALL COMPONENTS AND ATTACHMENTS INCLUDING WEIGHT OF ALUMINUM GANGWAY BEARING ON FLOAT 'C'.

ALUMINUM GANGWAY

1. GANGWAY MANUFACTURER SHALL SUBMIT SHOP DRAWINGS AND CALCULATIONS SIGNED AND SEALED BY A MAINE LICENSED PROFESSIONAL ENGINEER. MANUFACTURER SHALL BE RESPONSIBLE FOR FINAL DETERMINATION OF GANGWAY FRAMING AND CONFIGURATION TO MEET STRUCTURAL, PERFORMANCE, AND ACCESSIBILITY REQUIREMENTS IN ACCORDANCE WITH THE SPECIFICATIONS.
2. GANGWAY SHALL MEET THE FOLLOWING LOADING AND DEFLECTION CRITERIA:
   - DEAD LOAD SHALL CONSIST OF WEIGHT OF THE ENTIRE GANGWAY STRUCTURE PLUS ANY UTILITIES AND ATTACHMENTS.
   - ALLOWABLE STRESSES IN DECK SURFACE, GANGWAY FRAMING, AND MOUNTING COMPONENTS SHALL NOT BE EXCEEDED AT A UNIFORM LIVE LOAD OF 100 PSF.
   - 50 PSF UNIFORM LIVE LOAD MAX. DEFLECTION L/360
   - 100 PSF UNIFORM LIVE LOAD MAX. DEFLECTION NOT TO EXCEED GANGWAY CAMBER
   - ALL HANDRAIL AND POSTS SHALL BE DESIGNED TO WITHSTAND A 200 LB LOAD APPLIED IN ANY DIRECTION OR A 50 LB/FT LOAD APPLIED ALONG THE HANDRAIL LENGTH.
3. GANGWAY HINGES SHALL BE CAPABLE OF TRAVELING FREELY AND WITHOUT BINDING THROUGH THE ENTIRE RANGE OF WATER LEVELS FROM MLLW TO BASE FLOOD ELEVATION PLUS TWO-FEET OF ADDITIONAL ELEVATION IN EITHER DIRECTION.

FOR PERMIT

REMARKS

1 - 4" casing installed to 20.0' below mudline (bml), then wash ahead to 51.0' bml.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - Possible transition to Silty Clay at approximately 17.0' below mudline (bml) (El. -26.9'), based on increased driving resistance to advance probe.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

2 - Probe refusal at 54.2' bml (El. -61.5').

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Exploration No.: P-2

SURVEY AND PROPERTY NOTES:

1. LOCUS PARCEL IS DEPICTED ON CITY OF BIDDEFORD, TAX MAP 52, LOT 4 AND IS LOCATED IN THE INSTITUTIONAL (IN) ZONE. A PORTION OF THE SITE IS LOCATED IN THE LIMITED RESIDENTIAL (LR) SHORELAND OVERLAY DISTRICT.
2. THE RECORD OWNER IS THE UNIVERSITY OF NEW ENGLAND, BY DEED DATED APRIL 18, 1962, RECORDED IN THE YORK COUNTY REGISTRY OF DEEDS IN BOOK 1484, PAGE 0145.
3. UPLAND TOPOGRAPHY AND BASE SURVEY INFORMATION DEPICTED HEREON ARE BASED ON THE FOLLOWING SURVEYS:
   - "TOPOGRAPHIC SURVEY, MARINE SCIENCE CENTER, UNIVERSITY OF NEW ENGLAND" BY OWEN HASKELL, INC. DATED DEC. 13, 2022.
   - "TOPOGRAPHIC SURVEY AT MARINE SCIENCE CENTER" BY STATEWIDE SURVEYS, INC., DATED MAY 4, 2015.
4. HYDROGRAPHIC DATA DEPICTED HEREON IS BASED ON 2022 SURVEY BY OWEN HASKELL SURVEY.
5. FEDERAL CHANNEL LIMITS ARE DEPICTED BASED ON THE PLAN. "SACO RIVER, SACE AND BIDDEFORD, MAINE, CONDITION SURVEY" PUBLISHED BY THE U.S. ARMY CORPS OF ENGINEERS, DATED JULY 3, 2021.
6. HORIZONTAL COORDINATES ARE BASED ON NAD83 MAINE STATE PLANE WEST ZONE-1801 AND ARE EXPRESSED IN FEET. ELEVATIONS ARE BASED ON NAVD88 VERTICAL DATUM.
7. UTILITY INFORMATION DEPICTED HEREON IS BASED ON FEBRUARY 2023 UTILITY LOCATION SURVEY PERFORMED BY BLOOD HOUND, LLC UNDERGROUND UTILITY LOCATORS AND MAY NOT NECESSARILY REPRESENT ALL EXISTING UTILITIES. CONTACT DIG SAFE (1-888-DIG-SAFE) AND VERIFY EXISTING UTILITIES PRIOR TO ANY CONSTRUCTION OR EXCAVATION.
8. PORTIONS OF THE PROPERTY ARE DEPICTED AS BEING IN A SPECIAL FLOOD HAZARD AREA BASED ON FEMA PRELIMINARY FIRM 23031C0459G DATED APRIL 14, 2017. THE SITE IS LOCATED IN A VE ZONE HAVING BASE FLOOD ELEVATION OF 14 FT NAVD88.
9. SUBSURFACE INFORMATION IS BASED ON EXPLORATIONS PERFORMED IN 2015 AND 2022 CONSISTING OF BORINGS, PROBES, AND TEST PITS. REFER TO SHEETS B-001 - B-005 FOR SUBSURFACE INFORMATION.

NOTES:
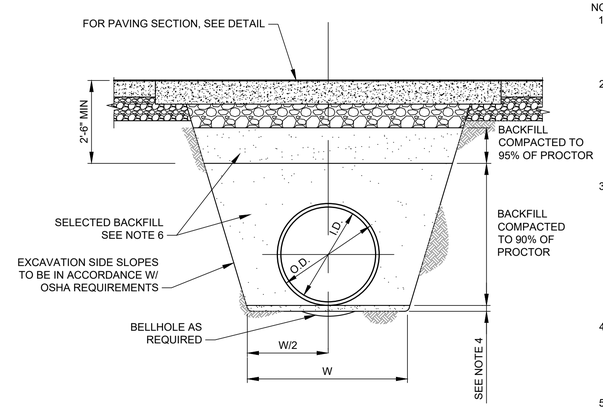
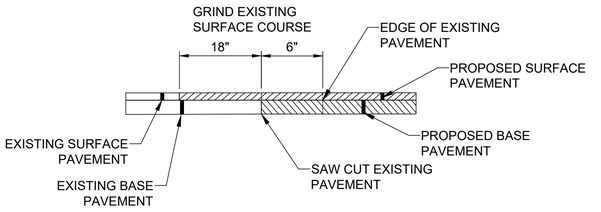
1. PAVEMENT DESIGN SHALL HAVE A MAINEDOT APPROVED JOB MIX FORMULA (JMF) WITHIN THE LATEST CALENDAR YEAR UNLESS OTHERWISE APPROVED BY OWNER.



1 HMA TRAVELWAY/SHOULDER TYPICAL SECTION

NO SCALE

PLUNGE POOL SIZING (minimum)				
SIZE	RIPRAP SIZING (D_{50})	WIDTH At the narrow end of pipe	LENGTH For slow flows (no pressure head)	LENGTH For high flows (with pressure head)
12"	5"	3-4'	4-6'	8-10'
18"	8"	4-6'	6-8'	12-18'
24"	10"	6-8'	8-10'	18-22'
30"	12"	8-10'	12-14'	22-28'
36"	14"	10-12'	14-16'	28-32'

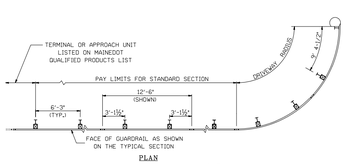


The diameter of the largest stone size in the mix should be about 1.5 times the D_{50} and the smallest one about one half the size. The thickness of riprap should never be less than 2 times the rock D_{50}.

NOTES:
1. TRENCH BOTTOM OR BEDDING FOR ALL PIPE SHALL BE GRADED TO PROVIDE UNIFORM SUPPORT FOR THE ENTIRE LENGTH OF THE PIPE EXCEPT AT BELLHOLES.
2. BELLHOLES FOR PIPES SHALL HAVE A CLEARANCE OF 3" BETWEEN THE BOTTOM OF THE BELLHOLE AND THE EXTERIOR OF THE PIPE BARREL, BUT IN NO CASE SHALL BELLHOLES BE SMALLER THAN REQUIRED TO FACILITATE PLACING OF THE PIPE OR PROPER JOINING OF THE PIPE.
3. COMPACTION BACKFILL SHALL BE COMPACTED TO A DEGREE AT LEAST EQUIVALENT TO THE EXISTING DEGREE OF COMPACTING OF ADJACENT IN-PLACE EARTH MATERIALS AGAINST WHICH SUCH COMPACTED BACKFILL IS TO BE PLACED, OR TO A MIN OF 95% OF THE LABORATORY STANDARD MAX ASTM D698 DENSITY, WHICHEVER IS GREATER.
4. MIN 3" DEEP LAYER OF SCARIFIED MATERIAL WHEN IN HARD MATERIAL. IN UNSUITABLE MATERIAL, OVER EXCAVATE AS DIRECTED BY ENGINEER (6" MIN) AND REPLACE WITH COMPACTED BACKFILL.
5. W = PIPE O.D. + 24" MIN
6. ALL SELECTED BACKFILL IS TO BE IN CONFORMANCE WITH STATE STANDARD SPECIFICATION.

3 TRENCH

NO SCALE



4 HMA PAVEMENT BUTT JOINT

NO SCALE

NOTES:
1. IF THE PIPE DISCHARGES ONTO A FLAT AREA, THE APRON SHOULD HAVE A WIDTH THAT IS THREE TIMES THE OUTLET PIPE'S DIAMETER. IF THE PIPE FLOWS HAVE THE POTENTIAL OF CAUSING A GULLY, A LEVEL SPREADER SHOULD BE PROVIDED.
2. THE CHANNEL SIDE SLOPES SHOULD BE NO STEEPER THAN 2:1. RIPRAP ON THE SIDES OF THE PLUNGE POOL SHOULD EXTEND TO THE TOP OF THE CHANNEL.
3. THE PLUNGE POOL SIZING AND THE MEDIAN SIZED RIPRAP CAN BE DETERMINED FROM THE FOLLOWING TABLE. THE THICKNESS OF RIPRAP SHOULD NOT BE LESS THAN 2 TIMES THE ROCK D50.
4. A GEOTEXTILE OR APPROPRIATE GRAVEL FILTER SHOULD BE USED TO PROTECT AGAINST PIPING OF SOIL FINES FROM BENEATH THE ROCK.
5. IN A CHANNEL THAT CAN BE REVEGETATED, SEED AND MULCH SHOULD BE APPLIED WITHIN 7 DAYS FROM FINAL CONSTRUCTION..

2 PLUNGE POOL

EROSION AND SEDIMENTATION CONTROL NOTES:

INTRODUCTION

THE FOLLOWING PLAN FOR CONTROLLING SEDIMENTATION AND EROSION IN THIS PROJECT IS BASED ON CONSERVATION PRACTICES FOUND IN THE MAINE EROSION & SEDIMENT CONTROL BMPS MANUAL, OCTOBER 2016, AND MAINE EROSION AND SEDIMENT CONTROL PRACTICE FIELD GUIDE FOR CONTRACTORS, REVISED 2014, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION. THE CONTRACTOR WHO IMPLEMENTS THIS PLAN SHALL BE FAMILIAR WITH THESE PUBLICATIONS AND ADHERE TO THEM AND THE PRACTICES PRESENTED HEREIN REFERENCE IS MADE TO THE EROSION CONTROL PLANS AND DETAILS (C-005 AND C-013) WITHIN THE PLAN SET, SHOWING THE LOCATIONS AND TYPES OF PROPOSED MEASURES TO BE IMPLEMENTED.

GENERAL EROSION AND SEDIMENTATION CONTROL NOTES:

1. EROSION AND SEDIMENTATION CONTROL MEASURES ARE PROPOSED TO CONTROL ACCELERATED EROSION AND SEDIMENTATION AND REDUCE ADVERSE IMPACTS FROM RUNOFF AND EROSION AT THE WORK SITE.
2. APPLICATION OF TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL BMP'S PUBLISHED BY MAINE DEP AND AVAILABLE AT: HTTPS://WWW.MAINE.GOV/DEP/LAND/EROSION/ESCBMPS/
3. THE WORK SHALL BE PERFORMED BY A CONTRACTOR THAT IS CERTIFIED BY MAINE DEP IN EROSION AND SEDIMENT CONTROL MEASURES. A CERTIFIED INDIVIDUAL SHALL BE ONSITE DURING ALL CONSTRUCTION ACTIVITY.
4. EROSION AND SEDIMENTATION DUE TO RUNOFF, TIDAL EXPOSURE, AND WAVE ACTION SHALL BE CONTROLLED BY STAGING CONSTRUCTION ACTIVITY TO MINIMIZE AREA AND TIME OF DISTURBANCE, APPLICATION OF SILT FENCE, BARRIERS, AND OTHER EROSION CONTROL MEASURES, AND PRESERVING NATURAL VEGETATION WHENEVER POSSIBLE.
5. THE CONTRACTOR'S SEQUENCE OF OPERATIONS AND SCHEDULE FOR WORK ACTIVITIES SHALL ACT TO MINIMIZE EXPOSURE TO EROSION.
6. THE CONTRACTOR SHALL TAKE CARE TO LIMIT THE AREA OF SOIL DISTURBANCE TO THE MINIMUM NECESSARY TO COMPLETE THE WORK.
7. EROSION CONTROL MEASURES, SEEDING, AND VEGETATION SHALL BE INSPECTED WEEKLY AND AFTER RAINSTORMS, RUNOFF EVENTS, AND STORM EVENTS UNTIL FINAL ACCEPTANCE. REPAIRS SHALL BE MADE WHEN NO LONGER SERVICEABLE DUE TO DAMAGE OR ACCUMULATION OF SEDIMENT.
8. AT THE COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AND CONTOUR, UNLESS OTHERWISE INDICATED ON THE PLANS.

GENERAL EROSION AND SEDIMENTATION CONTROL PRACTICES

THE FOLLOWING IS A LIST OF GENERAL EROSION CONTROL PRACTICES THAT WILL BE USED TO PREVENT EROSION AND SEDIMENTATION BEFORE, DURING AND AFTER THE CONSTRUCTION OF THIS PROJECT. IN ADDITION, SPECIAL CARE SHALL BE USED AT ALL TIMES TO:

LIMIT DISTURBANCE AND, HENCE, EROSION

1. CORRECT ANY EROSION PROBLEMS IMMEDIATELY.
2. REGULARLY MONITOR THE IMPLEMENTED PRACTICES, ESPECIALLY AFTER EVERY RAINFALL.
3. REVEGETATE DISTURBED AREAS AS SOON AS POSSIBLE AFTER CONSTRUCTION.
4. CONFORM TO ALL REQUIREMENTS/STANDARDS OF THE SITE'S MAINE DEP EROSION & SEDIMENT CONTROL BMP MANUAL.

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS

SILT FENCE AND/OR EROSION CONTROL MIX SEDIMENT BARRIERS WILL BE INSTALLED ALONG THE DOWN GRADIENT SIDE OF THE PROPOSED GROUND DISTURBANCE AREAS PRIOR TO ANY CONSTRUCTION ACTIVITIES WHERE SLOPES EXCEED 8% OR THERE IS FLOWING WATER BOTH SILT FENCE AND EROSION CONTROL MATTING BERMS SHALL BE USED.

CATCH BASIN PROTECTION

CATCH BASIN PROTECTION WILL BE INSTALLED AT THE FIRST DOWNGRADIENT CATCH BASIN IN STREET ADJACENT TO ANY CONSTRUCTION ACTIVITIES AND IN ALL ONSITE CATCH BASINS UNTIL SITE HAS BEEN COMPLETELY STABILIZED.

CONSTRUCTION PHASE

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION DURING CONSTRUCTION ON THIS PROJECT:

1. EROSION AND SEDIMENTATION CONTROL BMPS SHALL BE INTALLED PRIOR TO THE COMMENCEMENT OF EARTHWORK ACTIVITIES.
2. ONLY THOSE AREAS UNDER ACTIVE CONSTRUCTION WILL BE CLEARED AND LEFT IN AN UNTREATED OR UNVEGETATED CONDITION. AN AREA NO LARGER THAN WHAT CAN BE MULCHED IN ONE DAY MAY BE OPEN AT ONCE. ONCE CONSTRUCTION OF AN AREA IS COMPLETE, FINAL GRADING, LOAMING AND SEEDING SHALL OCCUR IMMEDIATELY (REFER TO "POST CONSTRUCTION REVEGETATION" SECTION). IF DURING FINAL GRADING, LOAMING AND SEEDING CAN NOT OCCUR IMMEDIATELY, IT SHALL BE DONE PRIOR TO ANY STORM EVENT AND WITHIN 15 DAYS OF COMPLETING CONSTRUCTION IN THE AREA. IF FINAL GRADING, LOAMING AND SEEDING CANNOT OCCUR WITHIN 7 DAYS, OR IF THE AREA IS NOT UNDER ACTIVE CONSTRUCTION FOR A PERIOD LONGER THAN 7 DAYS, SEE ITEM NO. 4 BELOW.
3. PRIOR TO THE START OF CONSTRUCTION IN A SPECIFIC AREA, SILT FENCING SHALL BE INSTALLED ON DOWNGRADIENT PORTIONS OF THE SITE AS LOCATED ON THE PLANS TO PROTECT AGAINST ANY CONSTRUCTION RELATED EROSION.
4. TOPSOIL WILL BE STOCKPILED WHEN NECESSARY IN AREAS WHICH HAVE MINIMUM POTENTIAL FOR EROSION AND WILL BE KEPT AS FAR AS POSSIBLE FROM EXISTING DRAINAGE AREAS AND WETLANDS. ALL STOCKPILES EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH ANCHORED MULCH (WITHIN 5 DAYS OF THE LAST DEPOSIT OF STOCKPILED SOIL).
   B. SEEDED WITH CONSERVATION MIX AND MULCHED IMMEDIATELY.
   C. STOCKPILES SHALL BE EITHER PLACED UPHILL OF AN EXISTING SEDIMENT BARRIER ON THE SITE OR ENCIRCLED BY A HAY BALE OR SILT FENCE BARRIER THE FIRST DAY THAT STOCKPILING COMMENCES.
5. ALL DISTURBED AREAS EXPECTED TO REMAIN LONGER THAN 7 DAYS SHALL BE:
   A. TREATED WITH STRAW AT A RATE OF 70-90 LBS. PER 1000 SQUARE FEET FROM 4/16 TO 10/1, OR AT A RATE OF 150-200 LBS. PER 1000 SQUARE FEET FROM 10/1 TO 4/15.
   B. SEEDED WITH CONSERVATION MIX OF PERENNIAL RYE GRASS (1.0 LBS/1000 SQ.FT.) AND MULCHED IMMEDIATELY. FROM 10/1 TO 4/15, FOLLOW THE SEEDING RATES AS OUTLINED BELOW IN SUB-SECTION 4.D. OF THE "POST CONSTRUCTION REVEGETATION" SECTION.
   C. MONITORED EVERY TWO WEEKS UNTIL SEEDING CAN OCCUR AND REMULCHED AS NEEDED TO PROTECT SLOPES.
6. ALL GRADING WILL BE HELD TO A MAXIMUM 3:1 SLOPE WHERE PRACTICAL. GREATER SLOPES MAY BE USED WHERE THE BANKS ARE PROTECTED WITH SOFT ARMOUR MATTING, EROSION CONTROL MATTING, OR RIPRAP. ALL SLOPES WILL BE STABILIZED WITH PERMANENT SEEDING IMMEDIATELY AFTER FINAL GRADING IS COMPLETE. (IT IS UNDERSTOOD THAT IMMEDIATELY MEANS WITHIN 5 DAYS OF THE COMPLETION OF WORK. SEE POST-CONSTRUCTION REVEGETATION FOR SEEDING SPECIFICATION).
7. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
8. CONSTRUCTION TRAFFIC WILL BE DIRECTED OVER THE EXISTING SITE ENTRANCE. THE ROAD SHALL BE SWEPT AND VACUUMED DAILY SHOULD SEDIMENT BE TRACKED ONTO IT.
9. ALL AREAS DRAINING TO A STORMWATER FILTER OR BMP SHALL BE STABILIZED PRIOR TO CONSTRUCTION OF FILTER MEDIA TO PREVENT SEDIMENT FROM CLOGGING MEDIA.

DEWATERING

1. ALL DEWATERING DISCHARGE LOCATIONS SHALL BE LOCATED ON RELATIVELY FLAT GROUND AT LEAST 75' FROM STREAMS AND 25' FROM WETLANDS. THE CONTRACTOR SHALL UTILIZE DIRTBAGS, EROSION CONTROL MIX BERMS, OR SIMILAR METHODS FOR FILTRATION OF DEWATERING AND SHALL CONFORM TO THE MAINE EROSION AND SEDIMENT CONTROL BMPS G-1, G-2, AND G-3.

POST CONSTRUCTION REVEGETATION

THE FOLLOWING GENERAL PRACTICES WILL BE IMPLEMENTED TO PREVENT EROSION AS SOON AS AN AREA IS READY TO UNDERGO FINAL GRADING:

1. A MINIMUM OF 6" OF LOAM WILL BE SPREAD OVER DISTURBED AREAS AND GRADED TO A UNIFORM DEPTH AND NATURAL APPEARANCE.
2. LAWN AREAS: "PARK MIX" GRASS SEED BY ALLEN, STERLING & LOTHROP (FALMOUTH, MAINE), OR APPROVED EQUAL.
3. MULCH SHALL BE HAY OR STRAW MULCHES THAT ARE DRY AND FREE FROM UNDESIRABLE SEEDS AND COURSE MATERIALS.
   A. APPLICATION RATE MUST BE 2 BALES (70-90 LBS.) PER 1,000 SQUARE FEET OR 1.5 TO 2 TONS (90-100 BALES) PER ACRE TO COVER 75 TO 90% OF THE GROUND SURFACE.
   B. DRIVE OVER WITH TRACKED CONSTRUCTION EQUIPMENT ON GRADES OF 5% AND LESS.
   C. BLANKET WITH TACKED PHOTODEGRADABLE/BIODEGRADABLE NETTING ON GRADES GREATER THAN 5%.
4. HYDRO-MULCH SHALL CONSIST OF A MIXTURE OF ASPHALT, WOOD FIBRE OR PAPER FIBRE AND WATER, WHICH IS SPRAYED OVER A SEEDED AREA. HYDRO-MULCH SHALL NOT BE USED BETWEEN 10/1 AND 4/15.
5. CONSTRUCTION SHALL BE PLANNED TO ELIMINATE THE NEED FOR SEEDING BETWEEN OCTOBER 1ST AND APRIL 15TH. SHOULD SEEDING BE NECESSARY BETWEEN THESE DATES, THE FOLLOWING PROCEDURE SHALL BE FOLLOWED:
   A. ONLY UNFROZEN LOAM SHALL BE USED.
   B. LOAMING, SEEDING AND MULCHING WILL NOT BE DONE OVER SNOW OR ICE COVER. IF SNOW EXISTS, IT MUST BE REMOVED PRIOR TO PLACEMENT OF SEED.
   C. WHERE PERMANENT SEEDING IS NECESSARY, ANNUAL WINTER RYE (1.2 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   D. WHERE TEMPORARY SEEDING IS REQUIRED, ANNUAL WINTER RYE (2.5 LBS/1000 S.F.) SHALL BE SOWN INSTEAD OF THE PREVIOUSLY NOTED SEEDING RATE.
   E. FERTILIZING, SEEDING AND MULCHING SHALL BE DONE ON LOAM THE DAY THE LOAM IS SPREAD.
   F. HAY MULCH SHALL BE SECURED WITH PHOTODEGRADABLE/BIODEGRADABLE NETTING. TRACKING BY MACHINERY ALONE WILL NOT SUFFICE. WINTER MULCHING RATES, SHALL BE DOUBLE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION, SHOULD BE APPLIED DURING THIS PERIOD.
6. FOLLOWING FINAL SEEDING, THE SITE WILL BE INSPECTED EVERY 30 DAYS UNTIL 90% COVER HAS BEEN ESTABLISHED. RESEEDING WILL BE CARRIED OUT BY THE CONTRACTOR WITHIN 10 DAYS OF NOTIFICATION BY THE DESIGN PROFESSIONAL THAT THE EXISTING CATCH IS INADEQUATE.

MONITORING SCHEDULE

THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING, MONITORING, MAINTAINING, REPAIRING, REPLACING AND REMOVING ALL OF THE EROSION AND SEDIMENTATION CONTROLS OR APPOINTING A QUALIFIED SUBCONTRACTOR TO DO SO. MAINTENANCE MEASURES WILL BE APPLIED AS NEEDED DURING THE ENTIRE CONSTRUCTION CYCLE. IMMEDIATELY FOLLOWING ANY SIGNIFICANT RAINFALL, AND AT LEAST ONCE A WEEK, A VISUAL INSPECTION WILL BE MADE OF ALL EROSION AND SEDIMENTATION CONTROLS AS FOLLOWS:

1. SILT FENCE SHALL BE INSPECTED AND REPAIRED. SEDIMENT TRAPPED BEHIND THESE BARRIERS SHALL BE EXCAVATED WHEN IT REACHES A DEPTH OF 6" AND REDISTRIBUTED TO AREAS UNDERGOING FINAL GRADING.
2. CONSTRUCTION ENTRANCE SHALL BE VISUALLY INSPECTED AND REPAIRED AS NEEDED. ANY AREAS SUBJECT TO RUTTING SHALL BE STABILIZED IMMEDIATELY. IF THE VOIDS OF THE CONSTRUCTION ENTRANCE BECOME FILLED WITH MUD, MORE CRUSHED STONE SHALL BE ADDED AS NEEDED. THE PUBLIC ROADWAY SHALL BE SWEPT AND VACUUMED SHOULD MUD BE DEPOSITED/TRACKED ONTO THEM.

STANDARDS FOR STABILIZING SITES FOR THE WINTER

THE FOLLOWING STANDARDS AND METHODOLOGIES SHALL BE USED FOR STABILIZING THE SITE DURING THE WINTER CONSTRUCTION PERIOD:

1. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SLOPES (ANY AREA HAVING A GRADE GREATER THAN 25%) - THE CONTRACTOR WILL SEED AND MULCH ALL SLOPES TO BE VEGETATED BY SEPTEMBER 15TH. IF THE CONTRACTOR FAILS TO STABILIZE ANY SLOPE TO BE VEGETATED BY SEPTEMBER 15TH, THEN THE CONTRACTOR WILL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE SLOPE FOR LATE FALL AND WINTER.
   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION AND EROSION CONTROL MATS: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SLOPE WITH WINTER RYE AT A RATE OF 3 POUNDS PER 1000 SQUARE FEET AND THEN INSTALL EROSION CONTROL MATS OR ANCHORED HAY MULCH OVER THE SEEDING AT TWICE THE RATE AS SPECIFIED ABOVE IN SUBSECTION 3.A OF THE "POST CONSTRUCTION REVEGETATION" SECTION. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS.
   B. STABILIZE THE SLOPE WITH WOOD-WASTE COMPOST: THE CONTRACTOR WILL PLACE A SIX-INCH LAYER OF WOOD-WASTE COMPOST ON THE SLOPE BY NOVEMBER 15TH. THE CONTRACTOR WILL NOT USE WOOD-WASTE COMPOST TO STABILIZE SLOPES HAVING GRADES GREATER THAN 50% (2H:IV) OR HAVING GROUNDWATER SEEPS ON THE SLOPE FACE.
   C. STABILIZE THE SLOPE WITH STONE RIPRAP: THE CONTRACTOR WILL PLACE A LAYER OF STONE RIPRAP ON THE SLOPE BY NOVEMBER 15TH. THE DEVELOPMENT'S OWNER WILL HIRE A REGISTERED PROFESSIONAL ENGINEER TO DETERMINE THE STONE SIZE NEEDED FOR STABILITY ON THE SLOPE AND TO DESIGN A FILTER LAYER FOR UNDERNEATH THE RIPRAP.

STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SOILS - BY SEPTEMBER 15TH THE CONTRACTOR WILL SEED AND MULCH ALL DISTURBED SOILS ON THE SITE. IF THE CONTRACTOR FAILS TO STABILIZE THESE SOILS BY THIS DATE, THEN THE CONTRACTOR WILL TAKE ON OF THE FOLLOWING ACTIONS TO STABILIZE THE SOIL FOR LATE FALL AND WINTER.

   A. STABILIZE THE SOIL WITH TEMPORARY VEGETATION: BY OCTOBER 1ST THE CONTRACTOR WILL SEED THE DISTURBED SOIL WITH WINTER RYE AT A SEEDING RATE OF 3 POUNDS PER 1000 SQUARE FEET, LIGHTLY MULCH THE SEEDED SOIL WITH HAY OR STRAW AT 75 POUNDS PER 1000 SQUARE FEET, AND ANCHOR THE MULCH WITH PLASTIC NETTING. THE CONTRACTOR WILL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS. IF THE RYE FAILS TO GROW AT LEAST THREE INCHES OR FAILS TO COVER AT LEAST 75% OF THE DISTURBED SOIL BEFORE NOVEMBER, 1, THEN THE CONTRACTOR WILL MULCH THE AREA FOR OVER-WINTER PROTECTION AS DESCRIBED IN ITEM III OF THIS STANDARD.
   B. STABILIZE THE SOIL WITH SOD: THE CONTRACTOR WILL STABILIZE THE DISTURBED SOIL WITH PROPERLY INSTALLED SOD BY OCTOBER 1ST. PROPER INSTALLATION INCLUDES THE CONTRACTOR PINNING THE SOD ONTO THE SOIL WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, AND WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL.
   C. STABILIZE THE SOIL WITH MULCH: BY NOVEMBER 15TH THE CONTRACTOR WILL MULCH THE DISTURBED SOIL BY SPREADING HAY OR STRAW AT A RATE OF AT LEAST 150 POUNDS PER 1000 SQUARE FEET ON THE AREA SO THAT NO SOIL IS VISIBLE THROUGH THE MULCH. IMMEDIATELY AFTER APPLYING THE MULCH, THE CONTRACTOR WILL ANCHOR THE MULCH WITH NETTING OR OTHER METHOD TO PREVENT WIND FROM MOVING THE MULCH OFF THE DISTURBED SOIL.

EROSION CONTROL REMOVAL

AN AREA IS CONSIDERED STABLE IF IT IS PAVED OR IF 90% GROWTH OF PLANTED SEEDS IS ESTABLISHED. ONCE AN AREA IS CONSIDERED STABLE, THE EROSION CONTROL MEASURES CAN BE REMOVED AS FOLLOWS:

1. SILT FENCE: SILT FENCE SHALL BE DISPOSED OF LEGALLY AND PROPERLY OFF-SITE. ALL SEDIMENT TRAPPED BEHIND THESE CONTROLS SHALL BE DISTRIBUTED TO AN AREA UNDERGOING FINAL GRADING OR REMOVED AND RELOCATED OFF-SITE.
2. STABILIZED CONSTRUCTION ENTRANCE: THE STABILIZED CONSTRUCTION ENTRANCE SHALL BE REMOVED ONCE THE COMPACTED ROADWAY BASE IN IN PLACE. STONE AND SEDIMENT FROM THE CONSTRUCTION ENTRANCE SHALL BE REDISTRIBUTED TO AN AREA UNDERGOING GRADING OR REMOVED AND RELOCATED OFFSITE.
3. MISCELLANEOUS: ONCE ALL THE TRAPPED SEDIMENTS HAVE BEEN REMOVED FROM THE TEMPORARY SEDIMENTATION DEVICES THE DISTURBED AREAS MUST BE REGRADED IN AN AESTHETIC MANNER TO CONFORM TO THE SURROUNDING TOPOGRAPHY. ONCE GRADED THESE DISTURBED AREAS MUST BE LOAMED (IF NECESSARY), FERTILIZED, SEEDED AND MULCHED IN ACCORDANCE WITH THE RATES PREVIOUSLY STATED.

THE ABOVE EROSION CONTROLS MUST BE REMOVED WITHIN 30 DAYS OF FINAL STABILIZATION OF THE SITE. CONFORMANCE WITH THIS PLAN AND FOLLOWING THESE PRACTICES WILL RESULT IN A PROJECT THAT COMPLIES WITH THE STATE REGULATIONS AND THE STANDARDS OF THE NATURAL RESOURCES PROTECTION ACT, AND WILL PROTECT WATER QUALITY IN AREAS DOWNSTREAM ROM THE PROJECT.

MAINE CONSTRUCTION GENERAL PERMIT REQUIRED

SUBMISSION OF A MAINE CONSTRUCTION GENERAL PERMIT (MCGP) IS REQUIRED PRIOR TO COMMENCEMENT OF ANY EXCAVATION ACTIVITIES.

INSPECTION AND MAINTENANCE (APPENDIX B)

1. INSPECTION AND MAINTENANCE REQUIREMENTS: INSPECT DISTURBED AND IMPERVIOUS AREAS, EROSION AND STORMWATER CONTROL MEASURES, AREAS USED FOR STORAGE THAT ARE EXPOSED TO PRECIPITATION, AND LOCATIONS WHERE VEHICLES ENTER OR EXIT THE SITE. INSPECT THESE AREAS AT LEAST ONCE A WEEK AS WELL AS BEFORE AND AFTER A SIGNIFICANT STORM EVENT (0.5 INCHES OF RAINFALL IN A 24-HOUR PERIOD) AND PRIOR TO COMPLETION OF PERMANENT STABILIZATION MEASURES. A PERSON WITH KNOWLEDGE OF EROSION AND STORMWATER CONTROL, INCLUDING THE STANDARDS IN THE MCGP AND ANY DEPARTMENTAL COMPANION DOCUMENT TO THE MCGP, MUST CONDUCT THE INSPECTION. THIS PERSON MUST BE IDENTIFIED IN THE INSPECTION LOG. IF BEST MANAGEMENT PRACTICES (BMPS) NEED TO BE MODIFIED OR IF ADDITIONAL BMPS ARE NECESSARY, IMPLEMENTATION MUST BE STARTED BY THE END OF THE NEXT WORKIN DAY AND COMPLETED WITHIN 7 CALENDAR DAYS AND PRIOR TO ANY STORM EVENT (RAINFALL). ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS AREA PERMANENTLY STABILIZED. DOCUMENTATION OF CORRECTION ACTIONS SHALL BE MAINTAINED WITH THE INSPECTION FORMS.
2. INSPECTION LOG (REPORT): A LOG (REPORT) MUST BE KEPT SUMMARIZING THE SCOPE OF THE INSPECTION, NAME(S) AND QUALIFICATIONS OF THE PERSONNEL MAKING THE INSPECTION, THE DATE(S) OF THE INSPECTION, AND MAJOR OBSERVATIONS RELATING TO OPERATION OF EROSION AND SEDIMENTATION CONTROLS AND POLLUTION PREVENTION MEASURES. MAJOR OBSERVATIONS MUST INCLUDE BMPS THAT NEED MAINTENANCE, BMPS THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATIONS(S) WHERE ADDITIONAL BMPS ARE NEEDED. FOR EACH BMP REQUIRING MAINTENANCE, BMP NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL BMPS, NOTE IN THE INSPECTION LOG THE CORRECT ACTION TAKEN AND WHEN IT WAS TAKEN. THE LOG MUST BE MADE ACCESSIBLE TO THE DEPARTMENT STAFF AND A COPY MUST BE PROVIDED UPON REQUEST. THE PERMITTEE SHALL RETAIN A COPY OF THE LOG FOR A PERIOD OF AT LEAST THREE YEARS FROM THE COMPLETION OF THE PERMANENT STABILIZATION.

HOUSEKEEPING (APPENDIX C)

1. SPILL PREVENTION: CONTROLS MUST BE USED TO PREVENT POLLUTANTS FROM CONSTRUCTION AND WASTE MATERIALS STORED ON SITE TO ENTER STORMWATER, WHICH INCLUDES STORAGE PRACTICES TO MINIMIZE EXPOSURE OF THE MATERIALS TO STORMWATER. THE SITE CONTRACTOR OR OPERATOR MUST DEVELOP, AND IMPLEMENT AS NECESSARY, APPROPRIATE SPILL PREVENTION, CONTAINMENT, AND RESPONSE PLANNING MEASURES.

NOTE: ANY SPILL OR RELEASE OF TOXIC OR HAZARDOUS SUBSTANCES MUST BE REPORTED TO THE DEPARTMENT. FOR OIL SPILLS, CALL 1-800-482-0777 WHICH IS AVAILABLE 24 HOURS A DAY. FOR SPILLS OF TOXIC OR HAZARDOUS MATERIAL, CALL 1-800-452-4664 WHICH IS AVAILABLE 24 HOURS A DAY. FOR MORE INFORMATION, VISIT THE DEPARTMENT'S WEBSITE AT: HTTP://WWW.MAINE.GOV/DEP/SPILLS/EMERGSPILLRESP/

2. GROUNDWATER PROTECTION: DURING CONSTRUCTION, LIQUID PETROLEUM PRODUCTS AND OTHER HAZARDOUS MATERIALS WITH THE POTENTIAL TO CONTAMINATE GROUNDWATER MAY NOT BE STORED OR HANDLED IN AREAS OF THE SITE DRAINING TO AN INFILTRATION AREA. AN "INFILTRATION AREA" IS ANY AREA OF THE SITE THAT BY DESIGN OR AS A RESULT OF SOILS, TOPOGRAPHY AND OTHER RELEVANT FACTORS ACCUMULATES RUNOFF THAT INFILTRATES INTO THE SOIL. DIKES, BERMS, SUMPS, AND OTHER FORMS OF SECONDARY CONTAINMENT THAT PREVENT DISCHARGE TO GROUNDWATER MAY BE USED TO ISOLATE PORTIONS OF THE SITE FOR THE PURPOSES OF STORAGE AND HANDLING OF THESE MATERIALS. ANY PROJECT PROPOSING INFILTRATION OF STORMWATER MUST PROVIDE ADEQUATE PRE-TREATMENT OF STORMWATER PRIOR TO DISCHARGE OF STORMWATER TO THE INFILTRATION AREA, OR PROVIDE FOR TREATMENT WITHIN THE INFILTRATION AREA, IN ORDER TO PREVENT THE ACCUMULATION OF FINES, REDUCTION IN INFILTRATION RATE, AND CONSEQUENT FLOODING AND DESTABILIZATION.

NOTE: LACK OF APPROPRIATE POLLUTANT REMOVAL BEST MANAGEMENT PRACTICES (BMPS) MAY RESULT IN VIOLATIONS OF THE GROUNDWATER QUALITY STANDARD ESTABLISHED BY 38 M.R.S.A. §465-C(1).

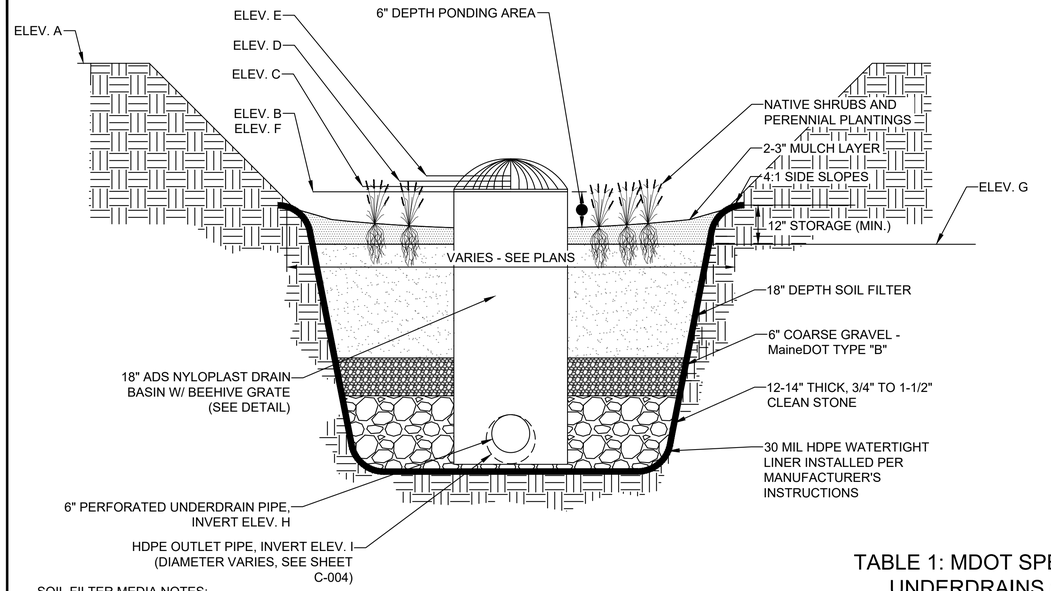
3. FUGITIVE SEDIMENT AND DUST: ACTIONS MUST BE TAKEN TO ENSURE THAT ACTIVITIES DO NOT RESULT IN NOTICEABLE EROSION OF SOILS OR FUGITIVE DUST EMISSIONS DURING OR AFTER CONSTRUCTION. OIL MAY NOT BE USED FOR DUST CONTROL, BUT OTHER WATER ADDITIVES MAY BE CONSIDERED AS NEEDED. A STABILIZED CONSTRUCTION ENTRANCE (SCE) SHOULD BE INCLUDED TO MINIMIZE TRACKING OF MUD AND SEDIMENT. IF OFF-SITE TRACKING OCCURS, PUBLIC ROADS SHOULD BE SWEPT IMMEDIATELY AND NO LESS THAN ONCE A WEEK AND PRIOR TO SIGNIFICANT STORM EVENTS. OPERATIONS DURING DRY MONTHS, THAT EXPERIENCE FUGITIVE DUST PROBLEMS, SHOULD WET DOWN UNPAVED ACCESS ROADS ONCE A WEEK OR MORE FREQUENTLY AS NEEDED WITH A WATER ADDITIVE TO SUPPRESS FUGITIVE SEDIMENT AND DUST.

NOTE: DEWATERING A STREAM WITHOUT A PERMIT FROM THE DEPARTMENT MAY VIOLATE STATE WATER QUALITY STANDARDS AND THE NATURAL RESOURCES PROTECTION ACT.

4. DEBRIS AND OTHER MATERIALS: MINIMIZE THE EXPOSURE OF CONSTRUCTION DEBRIS, BUILDING AND LANDSCAPING MATERIALS, TRASH, FERTILIZERS, PESTICIDES, HERBICIDES, DETERGENTS, SANITARY WASTE AND OTHER MATERIALS TO PRECIPITATION AND STORMWATER RUNOFF. THESE MATERIALS MUST BE PREVENTED FROM BECOMING A POLLUTANT SOURCE.

NOTE: TO PREVENT THESE MATERIALS FROM BECOMING A SOURCE OF POLLUTANTS, CONSTRUCTION AND POST-CONSTRUCTION ACTIVITIES RELATED TO A PROJECT MAY BE REQUIRED TO COMPLY WITH APPLICABLE PROVISION OF RULES RELATED TO SOLID, UNIVERSAL, AND HAZARDOUS WASTE, INCLUDING, BUT NOT LIMITED TO, THE MAINE SOLID WASTE AND HAZARDOUS WASTE MANAGEMENT RULES; MAINE HAZARDOUS WASTE MANAGEMENT RULES; MAINE OIL CONVEYANCE AND STORAGE RULES; AND MAINE PESTICIDE REQUIREMENTS.

5. EXCAVATION DEWATERING: EXCAVATION DEWATERING IS THE REMOVAL OF WATER FROM TRENCHES, FOUNDATIONS, COFFER DAMS, PONDS, AND OTHER AREAS WITHIN THE CONSTRUCTION AREA THAT RETAIN WATER AFTER EXCAVATION. IN MOST CASES THE COLLECTED WATER IS HEAVILY SILTED AND HINDERS CORRECT AND SAFE CONSTRUCTION PRACTICES. THE COLLECTED WATER REMOVED FROM THE PONDED AREA, EITHER THROUGH GRAVITY OR PUMPING, MUST BE SPREAD THROUGH NATURAL WOODED BUFFERS OR REMOVED TO AREAS THAT ARE SPECIFICALLY DESIGNED TO COLLECT THE MAXIMUM AMOUNT OF SEDIMENT POSSIBLE, LIKE A COFFERDAM SEDIMENTATION BASIN. AVOID ALLOWING THE WATER TO FLOW OVER DISTURBED AREAS OF THE SITE. EQUIVALENT MEASURES MAY BE TAKEN IF APPROVED BY THE DEPARTMENT.



NOTE: DEWATERING CONTROLS ARE DISCUSSED IN THE "MAINE EROSION AND SEDIMENT CONTROL BMPS, MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION."

6. AUTHORIZED NON-STORMWATER DISCHARGES: IDENTIFY AND PREVENT CONTAMINATION BY NON-STORMWATER DISCHARGES. WHERE ALLOWED NON-STORMWATER DISCHARGES EXIST, THEY MUST BE IDENTIFIED AND STEPS SHOULD BE TAKEN TO ENSURE THE IMPLEMENTATION OF APPROPRIATE POLLUTION PREVENTION MEASURES FOR THE NON-STORMWATER COMPONENT(S) OF THE DISCHARGE. AUTHORIZED NON-STORMWATER DISCHARGES ARE:.
   - DISCHARGES FROM FIREFIGHTING ACTIVITY;
   - FIRE HYDRANT FLUSHINGS;
   - VEHICLE WASHWATER IF DETERGENTS ARE NOT USED AND WASHING IS LIMITED TO THE EXTERIOR OF VEHICLES (ENGINE, UNDERCARRIAGE, AND TRANSMISSION WASHING IS PROHIBITED);
   - DUST CONTROL RUNOFF IN ACCORDANCE WITH PERMIT CONDITIONS AND APPENDIX (C)(3);
   - ROUTINE EXTERNAL BUILDING WASHDOWN, NOT INCLUDING SURFACE PAINT REMOVAL, THAT DOES NOT INVOLVE DETERGENTS;
   - PAVEMENT WASHWATER (WHERE SPILLS/LEAKS OF TOXIC OR HAZARDOUS MATERIALS HAVE NOT OCCURRED, UNLESS ALL SPILLED MATERIAL HAD BEEN REMOVED) IF DETERGENTS ARE NOT USED;
   - UNCONTAMINATED AIR CONDITIONING OR COMPRESSOR CONDENSATE;
   - UNCONTAMINATED GROUNDWATER OR SPRING WATER;
   - FOUNDATION OR FOOTER DRAIN-WATER WHERE FLOWS ARE NOT CONTAMINATED;
   - UNCONTAMINATED EXCAVATION DEWATERING (SEE REQUIREMENTS IN APPENDIX C(5));
   - POTABLE WATER SOURCES INCLUDING WATERLINE FLUSHINGS; AND
   - LANDSCAPE IRRIGATION
7. UNAUTHORIZED NON-STORMWATER DISCHARGES: THE DEPARTMENT'S APPROVAL UNDER THIS CHAPTER DOES NOT AUTHORIZE A DISCHARGE THAT IS MIXED WITH A SOURCE OF NON-STORMWATER, OTHER THAN THOSE DISCHARGES IN COMPLIANCE WITH APPENDIX C (6). SPECIFICALLY, THE DEPARTMENT'S APPROVAL DOES NOT AUTHORIZE DISCHARGES OF THE FOLLOWING:
   - WASTEWATER FROM THE WASHOUT OR CLEANOUT OF CONCRETE, STUCCO, PAINT, FORM RELEASE OILS, CURING COMPOUNDS OR OTHER CONSTRUCTION MATERIALS;
   - FUELS, OILS OR OTHER POLLUTANTS USED IN VEHICLE AND EQUIPMENT OPERATION AND MAINTENANCE;
   - SOAPS, SOLVENTS, OR DETERGENTS USED IN VEHICLE AND EQUIPMENT WASHING; AND
   - TOXIC OR HAZARDOUS SUBSTANCES FROM A SPILL OR OTHER RELEASE.

ADDITIONAL REQUIREMENTS: ADDITIONAL REQUIREMENTS MAY BE APPLIED ON A SITE-SPECIFIC BASIS.

CONSTRUCTION OVERSITE

THE APPLICANT WILL RETAIN THE SERVICES OF A PROFESSIONAL ENGINEER TO INSPECT THE CONSTRUCTION AND STABILIZATION FOR ALL STORMWATER MANAGEMENT STRUCTURES. IF NECESSARY, THE INSPECTING ENGINEER WILL INTERPRET THE POND'S CONSTRUCTION PLAN FOR THE CONTRACTOR. ONCE ALL STORMWATER MANAGEMENT STRUCTURES ARE CONSTRUCTED AND STABILIZED, THE INSPECTING ENGINEER WILL NOTIFY THE DEPARTMENT IN WRITING WITHIN 30 DAY

SOIL FILTER MEDIA NOTES:

SOIL FILTER MEDIA SHALL CONFORM TO MAINE DEP SOIL FILTER MEDIA OPTION 1, PER MAINE DEP STORMWATER BMP MANUAL CHAPTER 7.1. AS FOLLOWS:

1.1. SOIL FILTER MEDIA SHALL CONSIST OF A SILTY SAND SOIL OR SOIL MIXTURE COMBINED WITH A MATURE, MODERATELY FINE SHREDDED BARK OR WOOD FIBER MULCH.
1.2. THE RESULTING MIX SHALL CONTAIN NO LESS THAN 10% BY DRY WEIGHT ORGANIC MATERIAL.
1.3. THE RESULTING MIX SHALL CONTAIN 8% TO 12% PASSING THE NO. 200 SIEVE.
1.4. THE RESULTING MIX SHALL CONTAIN A MAXIMUM CLAY CONTENT OF 2%.

UNDERDRAIN OUTLET VALVE CALIBRATION NOTES:

AFTER THE COMPLETION OF INSTALLATION OF THE SOIL FILTER MEDIA, THE CONTRACTOR SHALL PERFORM THE FOLLOWING PROCEDURE TO CALIBRATE THE UNDERDRAIN OUTLET VALVE TO ACHIEVE THE 0.75"/HOUR DESIGN FLOW RATE.

1. BEGIN WITH VALVE HALF-OPEN.
2. CAREFULLY FLOOD THE BASIN UNTIL THERE IS 18" OF WATER STORED ABOVE THE SOIL FILTER MEDIA (UP TO THE HEIGHT OF OUTLET STRUCTURE RIM) WITHOUT CAUSING EROSION OF THE SOIL FILTER MEDIA.
3. RECORD THE TIME IT TAKES FOR THE 18" OF WATER TO DRAIN TO THE TOP OF THE SOIL FILTER MEDIA. THE TARGET DRAINDOWN TIME IS 24 HOURS.
4. IF THE 18" OF WATER DRAINS IN LESS THAN 24 HOURS, CLOSE THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
5. IF THE 18" OF WATER DRAINS IN MORE THAN 24 HOURS, OPEN THE VALVE SLIGHTLY AND REPEAT STEPS 2 & 3 ABOVE.
6. REPEAT THIS PROCESS UNTIL THE 18" OF WATER DRAINS IN 24 HOURS.

NOTES:
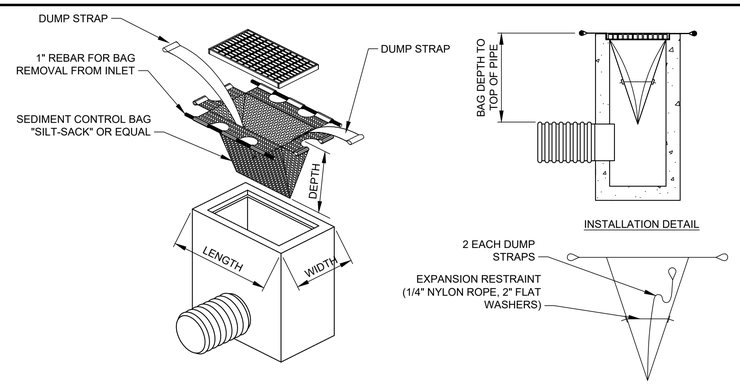
1. TEMPORARY SEDIMENT FENCE SHALL BE INSTALLED PRIOR TO ANY GRADING WORK IN THE AREA TO BE PROTECTED. THEY SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD AND REMOVED IN CONJUNCTION WITH THE FINAL GRADING AND SITE STABILIZATION.
2. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 592 GEOTEXTILE TABLE 1 OR 2, CLASS L WITH EQUIVALENT OPENING SIZE OF AT LEAST 30 FOR NONWOVEN AND 50 FOR WOVEN.
3. FENCE POSTS SHALL BE EITHER WOOD POST WITH A MINIMUM CROSS-SECTIONAL AREA OF 3 SQ. IN. OR A STANDARD STEEL POST.

5 SILT FENCE



NO SCALE

8 STABILIZED CONSTRUCTION ENTRANCE

NO SCALE

NOTES:
1. THE ENTRANCE/EXIT PAD SHOULD HAVE A LENGTH OF 50 FEET OR MORE AND A 12-FOOT MINIMUM WIDTH (OR AS APPROPRIATE TO CONTAIN THE WHEEL BASE OF CONSTRUCTION VEHICLES PLUS 3 FEET ON EITHER SIDE).
2. THE PAD SHOULD BE 6 INCHES OR MORE THICK WITH ANGULAR AGGREGATE (2-3 INCH DIAMETER). APPROPRIATE RECLAIMED CONCRETE MATERIAL MAY BE USED.
3. THE AGGREGATE SHOULD BE PLACED OVER A GEOTEXTILE FILTER TO PREVENT THE STONES FROM PUSHING INTO THE NATIVE SOIL.
4. AT THE BOTTOM OF SLOPES, A DIVERSION RIDGE SHOULD BE PROVIDED TO INTERCEPT RUNOFF.
5. BERMS MAY BE NECESSARY TO DIVERT WATER AROUND ANY EXPOSED SOIL, AND RUNOFF SHOULD BE DIRECTED TO A SEDIMENT TRAP.
6. THE WHEELS OF CONSTRUCTION EQUIPMENT MAY BE WASHED PRIOR TO EXITING THE SITE. WASHING SHOULD BE PERFORMED IN AN AREA THAT DRAINS TO A SEDIMENT TRAP OR BASIN.
7. THE PAD SHOULD BE INSPECTED WEEKLY, AND BEFORE AND AFTER EACH STORM. THE PAD MAY HAVE TO BE REPLACED IF THE VOIDS BECOME FILLED WITH SEDIMENT. STREET SWEEPING MAY BE NECESSARY

NOTES:
1. THE DIMENSION CHART ABOVE IS FOR STANDARD CATCH BASINS AND INLETS ONLY. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING THE CORRECT SIZE DEVICE FOR EACH INLET.
2. FOR NON-STANDARD CATCH BASINS AND INLETS, THE CONTRACTOR SHALL MEASURE DIMENSIONS IN THE FIELD AND ORDER THE APPROPRIATE SIZE(S).
3. THE INLET SEDIMENT CONTROL DEVICE SHALL BE OF HIGH FLOW DESIGN (200 GAL/MIN/FT), AS PER THE MANUFACTURER'S SPECS.
4. THE SEDIMENT CONTROL DEVICE SHALL BE INSPECTED DAILY BY THE CONTRACTOR AND MAINTAINED A MINIMUM ONCE PER MONTH OR WITHIN THE 48 HOURS FOLLOWING A STORM EVENT. FILTER SHALL BE CLEANED IN A MANNER WHICH ENSURES THAT ALL SEDIMENT REMAINS ON SITE.
5. SUBSTITUTION OF A SHEET OF FILTER FABRIC PLACED OVER THE OPENING OF THE INLET IS NOT APPROVED.
6. RECESSED CURB INLET CATCH BASINS MUST BE BLOCKED WHEN USING FILTER FABRIC INLET SACKS, SIZE OF FILTER INLET SACK TO BE DETERMINED BY MANUFACTURER.
7. THE FILTER SHALL BE REPLACED OR CLEANED WHEN THE BAG BECOMES HALF FULL.
8. SEE INLET PROTECTION NOTES STD. DETAIL E3.

NOTES:
1. THE SOIL SURFACE SHOULD BE FINELY GRADED AND SMOOTH FOR THE BLANKET TO HAVE DIRECT CONTACT WITH THE SOIL AND TO PREVENT UNDERMINING. EROSION CONTROL BLANKETS PERFORM BEST ON LOAMY SOILS AND SHOULD NOT BE USED ON ROCKY SITES OR SHALLOW SOILS.
2. SEED SHOULD BE SOWN BEFORE INSTALLING THE EROSION CONTROL BLANKET.
3. ALWAYS UNROLL THE BLANKET DOWNHILL WITHOUT STRETCHING AND ANCHOR THE UPSLOPE EDGE IN A 12 INCH DEEP TRENCH THAT IS BACKFILLED AND TAMPED.
4. OVERLAP SHINGLE STYLE A MINIMUM OF 12 INCHES AT THE TOP OF EACH ROW AND 4 INCHES AT THE EDGES OF PARALLEL ROWS. ANCHOR ALONG THE OVERLAP WITH A MAXIMUM SPACING OF 3 FEET OR AS REQUIRED BY THE MANUFACTURER.

7 BIODEGRADABLE STABILIZATION MATTING

NO SCALE

NOTES:
1. INSTALL THE FILTER BAG PRIOR TO INITIATING ANY ACTIVITIES WHICH WILL REQUIRE DEWATERING.
2. THE TYPE OF FABRIC SHOULD BE BASED ON THE SIZE OF SOIL PARTICLES TO BE TRAPPED (I.E. A WOVEN MATERIAL FOR COARSE PARTICLES AND A NONWOVEN MATERIAL FOR FINER PARTICLES).
3. A FILTER BAG SHOULD BE LOCATED IN AN AREA MOSTLY LEVEL (WITH LESS THAN 5% SLOPE). A PAD OF CRUSHED GRAVEL MAY BE PROVIDED.
4. AVOID DISCHARGING TO AN AREA THAT IS BARE OF VEGETATION OR NEWLY VEGETATED. ANY SIGN OF EROSION OR CHANNELIZATION FROM THE DISCHARGED WATER REQUIRES IMMEDIATELY CORRECTION.
5. FILTER BAGS HAVE A FINITE CAPACITY FOR SEDIMENT COLLECTION AND MAY BE PRONE TO PLUGGING. AVOID OVER-PRESSURIZING THE BAG OR IT MAY BURST.

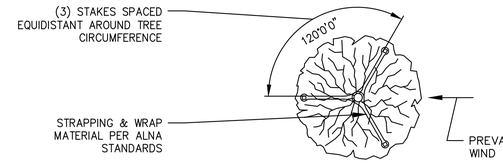
SHEET NAME: **REVEGETATION PLAN**

SHEET NO.: **C-015**

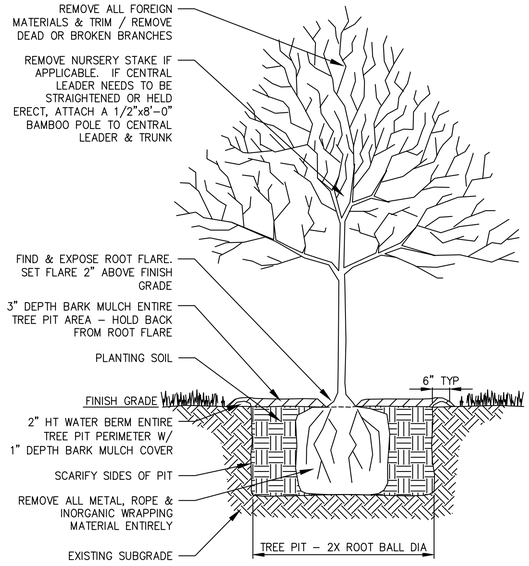
DICASTELNUOVO, VINNIE B:\Working\UNIVERSITY OF NEW ENGLAND\2203703 UNE Marine Science Center Pier\00_CAD\Design\Sheet\2203703-C-015.dwg - 6/9/2025

VEGETATION GENERAL NOTES:



1. VEGETATION MANAGEMENT (INSTALLATION AND MAINTENANCE) SHALL COMPLY WITH CITY OF BIDDEFORD SHORELAND ZONING ORDINANCE REQUIREMENTS.
   - 1.1. ALL REVEGETATION MUST OCCUR ALONG THE SAME SEGMENT OF SHORELINE AND IN AS CLOSE OF PROXIMITY AS PRACTICAL TO THE LOCATION WHERE THE VEGETATION WAS REMOVED.
   - 1.2. ALL VEGETATION REMOVED MUST BE REPLACED WITH NATIVE, NON-INVASIVE SPECIES.
   - 1.3. AT LEAST THREE DIFFERENT SPECIES OF TREES AND WOODY VEGETATION UNDER THREE FEET IN HEIGHT SHALL BE USED.
   - 1.4. NO MORE THAN ONE SPECIES OF TREES AND WOODY VEGETATION UNDER THREE FEET IN HEIGHT SHALL MAKE UP MORE THAN 50% OF THE TOTAL NUMBER OF TREES AND WOOD VEGETATION UNDER THREE FEET IN HEIGHT PLANTED.
   - 1.5. SURVIVAL OF ALL VEGETATION MUST BE MAINTAINED FOR A MINIMUM OF FIVE YEARS.
2. ALL REMOVED NON-NATIVE PLANT MATERIAL SHALL BE PROPERLY DISPOSED OF BY BURNING ON-SITE OR DISPOSAL AT A WASTE RECEIVING FACILITY.
3. AN UPDATED LIST OF NON-NATIVE INVASIVE VEGETATION IS MAINTAINED BY THE DEPARTMENT OF AGRICULTURE, CONSERVATION AND FORESTRY'S NATURAL AREAS PROGRAM:
4. HTTPS://WWW.MAINE.GOV/DACF/MNAP/FEATURES/INVASIVE_PLANTS/INVASIVES.HTM
5. PLANT SPECIES SUBSTITUTIONS SHALL BE APPROVED BY THE OWNER. CONTRACTOR SHALL REFERENCE THE FOLLOWING RESOURCES FOR COASTAL PLANT LIST GUIDELINES: CUMBERLAND COUNTY SOIL & WATER CONSERVATION DISTRICT - COASTAL PLANTING GUIDE; UNIVERSITY OF MAINE COOPERATE EXTENSION; AND/OR THE WILD SEED PROJECT.

VEGETATION INSTALLATION NOTES:



1. THE CONTRACTOR SHALL TAKE CARE NOT TO DAMAGE VEGETATION WITHIN THE CONSTRUCTION AREA UNLESS NOTED TO BE REMOVED, LIMBED OR PRUNED. THIS MAY REQUIRE HAND EXCAVATION WITHIN TREE DRIPLINES.
2. ALL PLANT MATERIAL SELECTIONS SHALL BE APPROVED BY THE OWNER PRIOR TO INSTALLATION.
3. ALL NEW PLANTING MATERIAL SHALL CONFORM TO THE MINIMUM GUIDELINES ESTABLISHED FOR NURSERY STOCK PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC. IN ADDITION ALL NEW PLANT MATERIAL FOR THE PROJECT SHALL BE OF THE HIGHEST SPECIMEN QUALITY.
4. ALL NEW PLANTS SHALL BE BALLED AND BURLAPPED OR CONTAINER GROWN UNLESS OTHERWISE NOTED ON THE PLANT LIST.
5. CONTRACTOR SHALL SUPPLY ALL NEW PLANT MATERIAL IN QUANTITIES SUFFICIENT TO COMPLETE THE PLANTING SHOWN ON THE DRAWINGS.
6. NO TREES SHALL BE PLANTED BEFORE ACCEPTANCE OF ROUGH GRADING. TREES SHALL BEAR SAME RELATIONSHIP TO FINISH GRADE AS THEY BORE TO PREVIOUS GRADE.
7. STAKE LOCATION OF ALL PROPOSED PLANTING FOR APPROVAL BY THE OWNER PRIOR TO COMMENCEMENT OF PLANTING.
8. ALL EXISTING TREES TO REMAIN SHALL BE PROPERLY PROTECTED, PRUNED AND FERTILIZED PER THE SPECIFICATIONS.
9. ALL LAWN AREAS DISTURBED BY CONSTRUCTION OPERATIONS INSIDE AND OUTSIDE THE LIMIT OF WORK SHALL BE LOAMED AND SEEDED AS SPECIFIED.
10. ALL PLANT BEDS ARE TO RECEIVE THREE INCHES (4") OF SHREDDED BARK MULCH AS SPECIFIED.
11. ANY PROPOSED SUBSTITUTIONS OF PLANT SPECIES SHALL BE MADE WITH PLANTS OF EQUIVALENT OVERALL FORM, HEIGHT, BRANCHING HABIT, FLOWER, LEAF, COLOR, FRUIT AND CULTURE ONLY AS APPROVED BY OWNER.
12. ALL AREAS TO BE SEEDED SHALL RECEIVE SOIL PREPARATION AS SPECIFIED PRIOR TO SEEDING, UNLESS OTHERWISE NOTED ON PLAN.
13. PREPARE ALL PLANT PITS WITH PLANTING SOIL TO A MINIMUM DEPTH MATCHING THE DEPTH OF ROOT BALLS.
14. NATIVE PLANT SPECIES REMOVED SHALL BE REPLANTED WITH IN-KIND SPECIES AND/OR THOSE PROVIDE IN THE PLANT LIST.

CONFIDENTIAL
MEMORANDUM

To: Biddeford Planning Board

From: Harry B. Center, II, Esq., City Solicitor

Date: June 11, 2025

RE: UNE Pier Application

I am writing to supplement my memorandum dated June 9, 2025 regarding the pending University of New England pier application. Citizens have raised the issue regarding TEC Associates review of the initial application pursuant to the Harbor ordinance (Ordinance 74-35). Again, I caution the planning board that its review of this matter must be limited to the applicable city ordinances. There is not a provision within Article 14 §15(C), in the Shoreland zoning ordinance or site plan review, which authorizes the planning board to review the permission requirement in the city's Harbor ordinance.

Attached please find my memorandum dated July 8, 2024, which was sent to the former city manager. In that memorandum, I address the role of the harbormaster, specifically citing the city council's policy committee meeting of August 7, 2023, during which the current ordinance was presented and ultimately adopted by the council. Because the permission required from the harbormaster is not an opportunity to approve or deny an application for a pier, and the harbormaster role is "nothing but a facilitator," I provided a legal opinion that concluded an engineering firm could be delegated the task of reviewing the pier application and determining whether the application was complete. As stated in the memorandum, it is common for the City of Biddeford, including this planning board, to engage outside experts, such as traffic engineers, environmental engineers, and individuals to perform soil or water tests. In this matter, the city appropriately delegated the task of the harbormaster facilitating an applicant request pursuant to the ordinance. Lastly, I note that should there have been any interested party who would have had standing, the time for any judicial review of the city's activity in July and August 2024 has long passed.

CONFIDENTIAL
MEMORANDUM

To: City Manager James Bennett

From: Harry B. Center, II, Esq., City Solicitor

Date: July 8, 2024

RE: Opinion and Interpretation of City Code 74-35

You have asked me to provide you with my interpretation and legal opinion regarding City of Biddeford Code of Ordinances Sec. 74-35, which relates to construction of marine piers. This code provision has become the subject of interpretation as a result of the University of New England's recent application for a marine pier. This current ordinance provision was recently amended in September, 2023. An August 9, 2023 policy committee meeting approved a proposed draft ordinance that was submitted by Chair of the Harbor Commission, John Schafer. Set forth below is the full section of the current ordinance:

> *Sec. 74-35. Construction of wharf, pier or landing regulated.*
>
> *[Ord. of 4-20-1993, S 26-29; Ord. No. 2007.11, 3-6-2007; amended 2-19-2013 by Ord. No. 2013.7; 9-19-2023 by Ord. No. 2023.1021*

(a) *No additions, alterations, new construction or/or changes to an existing wharf, pier or landing shall be made without prior permission of the Harbormaster.*

(b) *Permission for the construction of any new wharf or pier within the jurisdictional limits of the City shall not be granted without approval of the Harbormaster, along with federal, state, and local governing authorities.*

(c) *To obtain permission for any new wharf or pier, the applicant must provide the following information:*

(1) *A formal boundary survey that has been documented at the Registry of Deeds.*

(2) *A copy of the boundary survey showing the littoral zone, established by extending property lines seaward.*

(3) *A location map from a portion of a USGS topographic map or coastal chart.*

(4) *Distance to navigable channels or any federal navigation project.*

(5) *Mean high- and low-water boundary.*

(6) *A plan view on the drawing(s) that shows the location and dimensions of the applicant's structure(s) in relation to the applicant's property lines.*

(7) *A typical cross section/side view of the applicant's structures on the drawing(s).*

(8) *Evidence that owners of abutting properties have been notified of the applicant's intended project.*

(9) *Evidence that the 1) Maine Historic Preservation Commission, 2) Aroostook Band of Micmac, 3) Passamaquoddy Tribe of Indians: Pleasant Point; Indian Township, 4) Houlton Band of Maliseet Indians, and 5) Penobscot Indian Nation have been notified of the applicant's intended project.*

(10) *Completed applications to the Army Corps of Engineers, Department of Environmental Protection and Biddeford Code Enforcement. A regulatory permit from the Saco River Corridor Commission may also be required in some instances.*

(d) *The process to obtain permission for any new wharf or pier shall be facilitated by the Harbormaster. Initially, the Harbormaster shall be available to guide the applicant through the application process and finally, to sign off that all regulatory approvals have been obtained for construction.*

I have previously provided you with opinions relating to allegations regarding the current City of Biddeford Harbormaster's prejudicial and biased statements regarding the potential University of New England pier. I have opined those statements made by the current harbormaster prior to any formal application from UNE, such as "I will never approve the pier application in that location," constituted bias and a violation of the University's due process rights. You removed the current harbormaster from consideration of the UNE marine pier application. While the City determines who, on behalf of the City, will function in the role as harbormaster regarding the UNE marine pier application, you have asked me to review and provide you with a legal opinion as to what conditions and criteria would be applied to the marine pier application on behalf of the City, pursuant to the aforementioned code provisions.

The interpretation of the provisions of a municipal ordinance is a question of law. *Rockland Plaza Realty Corporation v. City of Rockland, 2001 Me. 81.* Numerous Maine Supreme Court Opinions provide that ordinance provisions should be given their plain and ordinary meaning, and any interpretation of ordinance language should be done in a manner to avoid absurd, illogical, or inconsistent results. *Wright v. Town of Kennebunkport, 1998 Me. 184.* There is a legal presumption favoring the validity of municipal ordinances and a municipal ordinance's constitutionality and reasonableness will be presumed. *Gabriel v. Town of Old Orchard Beach, 390 A.2d 1065 (Me. 1978).* In construing and interpreting municipal ordinances, a reviewing Court may review the purpose of the enactors to determine the intent of the ordinance. *Natale v. Kennebunkport Board of Zoning Appeals, 363 A.2d 1372 (Me. 1976).* Applying these legal principles regarding ordinance interpretation, I can provide you with the following opinions.

Subsection (a) and (b) of Sec. 74-35 expressly provide that any new construction of a pier, within the jurisdictional limits of the City of Biddeford, requires permission of the harbormaster. The issue is what criteria the harbormaster applies when determining whether to "grant permission." On its face, it would appear that the harbormaster has the authority to "deny" permission of a pier application. However, applying the aforementioned legal principles when reviewing the ordinance at (c) (1-10), it is my opinion that the role of a harbormaster granting permission is limited to a review of the information set forth in items 1-10. The harbormaster's review is limited to inspection of the items for completeness, then upon the applicant's receipt of all other agency's approval, permission is then granted to the applicant to proceed to the City Planning Board and Code Office.

The ordinance provides at subsection (d), that the harbormaster shall ***guide*** the applicant through the application process, and ***"sign off that all regulatory approvals have been obtained for construction."*** In my opinion, a plain and ordinary interpretation of the entire ordinance set forth in Section 74-35 leads to the conclusion that the harbormaster's role in granting permission is limited to an initial determination that all of the items set forth in (c) (1-10) have been completed and submitted to the appropriate governing bodies, and then a subsequent determination as to whether those agencies have granted approval.

When interpreting ordinance provisions, the court looks to the legislative intent of the enacting body. A review of the intent of the City Policy Committee and ultimately the City Council's intent supports my opinions regarding interpretation of the ordinance. Ordinance 74–35 was initially reviewed by the city Council subcommittee, the Policy Committee. At a public meeting on August 7, 2023, chairperson of the Harbor Commission, John Schaeffer, presented the proposed ordinance. During that meeting, City Counselor, Norman Belanger asked Mr. Schaeffer, whether the harbormaster was the person who issued a permit for a new pier. Mr. Schaeffer expressly responded, *"that is absolutely not the case."* Mr. Schaeffer further explained that the harbormaster is *"nothing but a facilitator"*. This legislative intent, combined with reading the ordinance as a whole, leads to the legal conclusion that the harbor-master's role is to guide an applicant through the process, and determine whether the items in subsection (c) (1-10), are complete and ultimately approved by the other agencies.

Construing the ordinance in its entirety and a review of the legislative (City Council) intent unequivocally evidences a clear intent defining the role of the harbormaster as a facilitator. An applicant for a new pier must, as a condition precedent, initially establish that items 1 through 10 are complete. Upon return to the harbormaster following completion of those items and receipt of approval from the regulatory bodies, the harbormaster, then ***"signs off"***. The express use of the term ***"signs off"*** establishes the role of the harbormaster in the process.

It is further my opinion that review of items 1 through 10 are not exclusively delegated to the appointed harbormaster. Facilitation and review of those items may be delegated to a person or entity with technical expertise, such as an engineering firm. It is common for the City to engage independent experts to review permit applications such as traffic engineers, environmental engineers and others depending on the nature of the approval sought. Because the review process is not the final approval by the City, such delegation is permissible. It is important to note that the harbormaster, the code enforcement officer and other individuals in city offices, such as

planners and assistant code personnel, are generally not licensed, professional engineers, nor do their approvals act as performing those expert reviews. The Planning Board, Code Office and other City employees rely on submissions from the applicant such as a stamped professional engineer's approval on plans submitted, structural plans, and other highly technical information that is beyond the scope of city officials. The city does not want to be held liable for the soundness of any project, nor the technical approvals of those projects. City officials rely on the applicant's expert's submitted plans and/or approvals from other regulatory bodies such as the Army Corp of Engineers and the State Department of Environmental Protection in the case of marine piers.

It is my legal opinion that the harbormaster does not issue or approve a permit to construct a marine pier. Pursuant to the ordinance, the harbormaster acts as a facilitator to ensure the prerequisites have been submitted, then once all those approvals are obtained then performs the ministerial act of signing off/granting permission to proceed to the City Planning Board and Code Office. The City Shoreland Zoning Ordinance, as well as the duties of the code enforcement officer to issue permits for structures, provide the city with the necessary final review of the process and protect the City's interests. The harbormaster role pursuant to the ordinance is limited to being a facilitator of the application and ultimately signing off, moving the application forward to the Planning Board and Code Office.

CONCLUSION

1. Reading the ordinance as a whole and applying legal principles for interpretation of the ordinance, the harbormasters role is as a facilitator to ensure that an applicant for a marine pier has completed items in section (c) 1-10 as a condition precedent.
2. The City may delegate the harbormaster tasks (facilitation of submission to AOC, DEP, etc.) and ensuing completeness, to a third party such as an independent engineer or firm.
3. Once an applicant has received information that includes APPROVALS from the agencies that have expertise in reviewing such projects, the harbormaster performs that ministerial task of granting permission to the applicant or "signs off", pursuant to section (d) of the ordinance.
4. Once the harbormaster signs off on the marine pier application, the Planning Board and Code office review the project and ultimately decide whether grant approval and issue the appropriate permits, pursuant to the City's Shoreland Zoning Ordinance and Floodplain Management Ordinance.

CONFIDENTIAL
MEMORANDUM

To: Biddeford Planning Board

From: Harry B. Center, II, Esq., City Solicitor

Date: June 9, 2025

RE: UNE Pier Application

The following sets forth my opinions and responses to the various questions raised during the initial planning board meeting regarding the University of New England pier application. This Memorandum also addresses questions from the planning department and is in response to comments made by the public. Some responses are set forth by reference to the attached prior documentation, opinion memorandum, and correspondence.

I. SCOPE OF PLANNING BOARD REVIEW

Initially as City Attorney, I must advise the planning board as to the criteria for legal review of this application. This project falls within the jurisdiction of the city's shoreland zoning ordinance. Pursuant to the city land use ordinances, this project is also subject to site plan review. Those ordinances provide the planning board with jurisdiction to review and vote on this project.

The planning board's review of the UNE pier application is pursuant to Article XIV of the city's, shoreland zoning ordinance Section 15 (C). That ordinance provision, attached hereto, provides the only basis for planning review and subsequent granting of approval or denial. Just last week, the Maine Supreme Judicial Court in *Newfield Sand v. Town of Newfield, 2025 ME 45,* confirmed the well-established legal authority relating to a planning board's application of ordinance provisions when making any determination to grant or deny an application. The court stated, that any conditions imposed by a municipal planning board must be authorized by the enabling ordinance and defined clearly when a permit is considered, so that the applicant understands what is required, *Newfield Sand v. Town of Newfield* citing *Cobbossee Development Group v. Town of Winthrop 585 A.2d 190 (ME. 1981).* Permit requirements and ordinances lacking specificity are vulnerable to challenge for vagueness or excessive delegation of the municipalities legislative authority *Doane v. Department of Health and Human Services 2021 ME 28.*

At the May 21, 2025 initial planning board meeting, much public comment related to the proposed location of the pier, the current of the river in the area where the proposed pier would be located, the depth of the water at that location and other issues, including, but not limited to moorings in the vicinity of the pier location. None of those concerns raised are within the jurisdiction of the planning board pursuant to Article XIV, §15(C.)

Regarding the issue of the planning board's jurisdiction, and what standards the planning board may apply, considering whether or not to approve this project, I advise the planning board to also rely upon recommendations from the City of Biddeford planning department staff. I have asked staff to review whether I am missing any provisions that would allow the planning board to consider water depth at the location of the proposed pier, impact of the proposed pier on navigation, impact of the proposed pier on the current of the river or any of the other many navigation and waterway related concerns, raised by many of the speakers at the public hearing. To date, I have not been advised of any such provisions are within the planning board review process.

II. REMOVAL OF CURRENT HARBORMASTER FROM UNE PIER PROCESS

Attached is a memorandum that I drafted for the former city manager on May 15, 2024 regarding the UNE pier application and issues regarding the Biddeford Harbormaster and the Biddeford Harbor commission. That memorandum is titled "confidential" because it contained my legal advice to the city manager regarding numerous issues involved at that time. A review of the attached memorandum starting with the "issue" section provides background. You may note that the University of New England is arguing that the late, former harbormaster actually gave his approval verbally for the current requested site.[1] Please review the memorandum, as it explains the legal basis for why the harbormaster's role in this process was changed as well as the legal basis for removing current Harbor commission from the city's review process.

Enclosed, please find a memorandum from the former city manager to the Mayor, City Council, and the University of New England, dated May 22, 2024. In that memorandum, the city's action relating to the pier was set forth in writing. Additionally, I attach a letter dated May 22, 2024 from the former city manager to the current harbormaster which advised the current harbormaster that he would not be handling any review or approval of the UNE project and the basis for that decision.

III. HARBORMASTER PRO TEM PRIOR PERMISSION

Enclosed as a July 22, 2024 letter (I do not have a signed copy) from an independent engineering, firm, TEC Associates addressed to the city, outlining the fee and scope of project for TEC Associates to act as a harbormaster pro tem. The harbormaster's role in reviewing pier applications pursuant to city code Section 74-35, is limited to the Harbormaster being "nothing but a facilitator."[2] This engineering firm reviewed the UNE application in the role of Harbormaster Pro Tem pursuant to the city ordinance. On August 19, 2024, the city of Biddeford was provided notice that the application was complete and in the role of temporary harbormaster TEC Associates granted permission pursuant to the ordinance. The sole legal basis for a harbormaster to approve or deny a pier application is to **facilitate and guide the applicant's application process and ensure that the application is complete.** The city's harbor ordinance has no legal standards in place to review a pier application for whether the water depth is appropriate, there is an impact on current navigation, or other arguments made by the public at the May 21, 2025 public hearing. The same legal principles that limit a planning board's ability to review an application, also apply to

[1] The City has rejected that position.

[2] Quotation from former Harbor Commission Chair John Schaefer to the City Council policy committee on August 7, 2023, explaining the intent in drafting code Provision 74-35.

any review by a harbormaster. A citizen applying to their government for approval is constitutionally entitled to be made aware of the legal standards, and only those legal standards validly adopted by the governmental body may be applied to appeal, to approve, or deny a given application. I also attach a memorandum I sent to the former city manager on July 8, 2024, explaining the legal support for the principles, as well as the limitations of the harbormaster's review of a pier application.

IV. POTENTIAL PLANNING BOARD "DENIAL WITHOUT PREJUDICE"

I have been asked whether a member of the planning board may make a motion to "deny without prejudice" regarding the pier application. Any such denial must be based upon a standard that is applicable on this issue. The planning board may not arbitrarily deny a project based upon a desire to simply postpone it. There is no specific provision that I could find to authorize a "denial without prejudice." For guidance, a review of the zoning board of appeals ordinance provides that an applicant who has been denied may make another application two years after that denial or make a substantial change in the request. I would be very concerned about my ability to support a "denial without prejudice" if it is simply intended to delay the project and not based upon any of the standards set forth in the shoreland zoning ordinance.

The planning board enabling ordinance states that it must adopt Roberts Rules of Order. Under Roberts Rules a motion to table either to a date certain or indefinitely may be made. However, I caution you that such a motion without a specific Basis, i.e., needs more information on a subject that is within the planning board jurisdiction, an appeal could be taken from an arbitrary motion to table. I see no legal support for a motion to deny, without prejudice. The planning board may choose to grant the permit for the pier, deny it, or move to table it. Any such final action will first be appealed to the zoning board of appeals, then to the courts.

V. MOORINGS

You have asked me for advice regarding the issue of the placement of moorings in the area where the proposed pier would be located. The planning board has no jurisdiction regarding the issue of moorings. Similar to the analogy of a property ownership dispute between an applicant and another party, the planning board does not have jurisdiction over the legal issues of title or ownership. There are no provisions in the Shoreland zoning ordinance which the planning board would use to review the issue of the impact on moorings when a pier is constructed. Arguments by the public about ownership of the moorings, relocation of the moorings, and other concerns are not subject to the planning board review of this project.

Attached is a copy of the city's mooring permit application. Within that document, it is stated that the city may move the location of a mooring at the city's discretion at any time. Further, while it is not necessary for the planning board to consider all of these issues, a mooring permit is issued for only one year, and does not give the permit holder a legal ownership in any rights in the waterway. Even if the mooring issue was within the planning board's jurisdiction, the planning board would not require a pier, dock, or wharf applicant to compensate mooring permitees who may have moorings adjacent to a potentially constructed pier, dock, or wharf. This issue is not within the scope of the planning boards review.

CITY OF BIDDEFORD
SHORELAND ZONING
ORDINANCE
ARTICLE XIV
SECTION 15(C)

g. A vegetated buffer area is established within 25 feet, horizontal distance, of the normal high-water line of a water body, tributary stream, or upland edge of a wetland when a natural buffer area does not exist. The buffer area must meet the following characteristics:

i. The buffer must include shrubs and other woody and herbaceous vegetation. Where natural ground cover is lacking, the area must be supplemented with leaf or bark mulch;

ii. Vegetation plantings must be in quantities sufficient to retard erosion and provide for effective infiltration of stormwater runoff;

iii. Only native species may be used to establish the buffer area;

iv. A minimum buffer width of 15 feet, horizontal distance, is required, measured perpendicularly to the normal high-water line or upland edge of a wetland;

v. A footpath not to exceed the standards in Section 15P2a, may traverse the buffer.

6. Notwithstanding the requirements stated above, stairways or similar structures may be allowed with a permit from the Code Enforcement Officer, to provide shoreline access in areas of steep slopes or unstable soils provided; that the structure is limited to a maximum of four feet in width; that the structure does not extend below or over the normal high-water line of a water body or upland edge of a wetland, (unless permitted by the Department of Environmental Protection pursuant to the Natural Resources Protection Act, 38 M.R.S.A. § 480-C); and that the applicant demonstrates that no reasonable access alternative exists on the property.

C. Piers, docks, wharfs, bridges and other structures and uses extending over or below the normal high-water line of a water body or within a wetland.
[Amended 2-2-2010 by Ord. No. 2009.98; 10-18-2016 by Ord. No. 2016.69]

1. Except as provided in Section 15C11 and Section 15X7, no more than one pier, dock, wharf or similar structure extending or located below the normal high-water line of a water body or within a wetland is allowed on a single residential lot; except that when a single lot contains at least twice the minimum shore frontage as specified in Section 15A, a second structure may be allowed and may remain as long as the lot is not further divided.

2. Access from shore shall be developed on soils appropriate for such use and constructed so as to control erosion.

3. The location shall not interfere with existing developed or natural beach areas.

4. The facility shall be located so as to minimize adverse effects on fisheries.

5. The facility shall be no larger in dimension than necessary to carry on the activity and be consistent with the surrounding character and uses of the area. A temporary pier, dock, or wharf in nontidal waters shall not be wider that six feet for noncommercial uses.

6. No new structure shall be built on, over or abutting a pier, wharf, dock or other structure extending beyond the normal high-water line of a water body or within a wetland unless the structure requires direct access to the water body or wetland as an operational necessity.

7. New permanent piers and docks on nontidal waters shall not be permitted unless it is clearly demonstrated to the Planning Board that a temporary pier or dock is not feasible, and a permit has been obtained from the Department of Environmental Protection, pursuant to the Natural Resources Protection Act.

8. No existing structures built on, over or abutting a pier, dock, wharf or other structure extending beyond the normal high-water line of a water body or within a wetland shall be converted to residential dwelling units in any district.

9. Except in the General Development District, structures built on, over or abutting a pier, wharf, dock or other structure extending beyond the normal high-water line of a water body or within a

wetland shall not exceed 20 feet in height above the pier, wharf, dock or other structure.

NOTE: Permanent structures projecting into or over water bodies shall require a permit from the Department of Environmental Protection pursuant to the Natural Resources Protection Act, Title 38 M.R.S.A., Section 480-C.

10. Vegetation may be removed in excess of the standards in Section 15P of this ordinance in order to conduct shoreline stabilization of an eroding shoreline, provided that a permit is obtained from the Planning Board. Construction equipment must access the shoreline by barge when feasible as determined by the Planning Board.

    a. When necessary, the removal of trees and other vegetation to allow for construction equipment access to the stabilization site via land must be limited to no more than 12 feet in width. When the stabilization project is complete, the construction equipment accessway must be restored.

    b. Revegetation must occur in accordance with Section 15S.

    NOTE: A permit pursuant to the Natural Resource Protection Act is required from the Department of Environmental Protection for shoreline stabilization activities.

11. A deck over a river may be exempted from the shoreland setback requirements if it is part of a downtown revitalization project that is defined in a project plan approved by the legislative body of the municipality, and may include the revitalization of structures formerly used as mills that do not meet the structure setback requirements, if the deck meets the following requirements:

    a. The total deck area attached to the structure does not exceed 700 square feet;

    b. The deck is cantilevered over a segment of a river that is located within the boundaries of the downtown revitalization project;

    c. The deck is attached to or accessory to an allowed commercial use in a structure that was constructed prior to 1971 and is located within the downtown revitalization project;

    d. The construction of the deck complies with all other applicable standards, except the shoreline setback requirements in Section 15B; and

    e. The construction of the deck complies with all other state and federal laws.

D. Campgrounds. Campgrounds shall conform to the minimum requirements imposed under state licensing procedures and the following:

    1. Campgrounds shall contain a minimum of 5,000 square feet of land, not including roads and driveways, for each site. Land supporting wetland vegetation, and land below the normal high-water line of a water body shall not be included in calculating land area per site.

    2. The areas intended for placement of a recreational vehicle, tent or shelter, and utility and service buildings shall be set back a minimum of 100 feet, horizontal distance, from the normal high-water line of a great pond classified GPA or a river flowing to a great pond classified GPA, and 75 feet, horizontal distance, from the normal high-water line of other water bodies, tributary streams, or the upland edge of a wetland.
    [Amended 2-2-2010 by Ord. No. 2009.98]

E. Individual private campsites. Individual, private campsites not associated with campgrounds are allowed, provided the following conditions are met:
[Amended 2-2-2010 by Ord. No. 2009.98]

    1. One campsite per lot existing on the effective date of this ordinance, or 30,000 square feet of lot area within the Shoreland Zone, whichever is less, may be permitted.

MAY 15, 2024
LEGAL OPINION FROM CITY ATTORNEY TO CITY MANAGER REGARDING VIOLATIONS OF DUE PROCESS BY HARBORMASTER AND HARBOR COMMISSION

CONFIDENTIAL
MEMORANDUM

To: City Manager James Bennett

From: City Attorney Harry B. Center, II, Esq.

Date: May 15, 2024

RE: UNE Pier Application/Due Process Issues

BACKGROUND

Starting in 2015, The University of New England (hereinafter "UNE") has researched and undertaken preliminary steps to construct a marine pier/wharf appurtenant to its campus in the City of Biddeford (UNE refers to this as the Girard Marine Science Center Pier-hereinafter "pier"). The pier would be constructed within the City's jurisdiction of the Saco River. Pursuant to City of Biddeford Code of Ordinances (hereinafter "Code") Section 74-35 (a), any new construction of a pier/wharf must be approved by the City of Biddeford Harbormaster. Pursuant to the Charter of the City of Biddeford (hereinafter "Charter"), Article X, Section 7, the position of Harbormaster is created. Code provisions 74-46 through 74-51 set forth the authority, duties, qualifications and compensation of the Biddeford Harbormaster.

Pursuant to the City Charter, Article IV, the City Manager is the chief administrator of the City and has complete administrative authority over all City of Biddeford personnel, including the Harbormaster. That authority includes the power to direct, supervise, discipline all city department heads and officers and to follow and implement laws of the Federal Government, State of Maine and the Charter and Code provisions of the City of Biddeford.

The Harbormaster is a municipal government official, who must follow all Federal and State Constitutional provisions as well as the Charter and Code. A party aggrieved by a decision of the Harbormaster may appeal to the City's Harbor Commission, which is a Municipal body, established pursuant to the Code Section 74-61. Pursuant to Section 74-63, appeals from parties aggrieved by a decision of the Harbor Master are before the Harbor Commission.

ISSUE

In 2015 UNE initially approached the City with a plan/site map prepared by Baker Design Consultants, which set forth nine potential locations for the pier. UNE contends that at a site walk in August 2015 former Harbormaster Marshall Alexander verbally approved or accepted a location known as Site #7 for the pier. This is a disputed issue of fact. In my opinion, notwithstanding the Code provision which provides that the Harbormaster will facilitate and

guide any applicant through the application process (Code 74-35(d)), because UNE has not formally applied for approval of the pier, no formal municipal decision has been made. Due to funding delays and the pandemic and such, UNE never moved forward with a formal request to the Harbormaster seeking approval to construct the pier at Site #7. In the Fall of 2023, UNE contacted the current Harbormaster Paul Laverriere, to move forward on Site #7.

In early 2024 City officials received complaints from representatives of UNE regarding the Harbormaster Paul Laverriere's conduct in his capacity as Harbormaster as it relates to the proposed pier. Note that I do not call this a " pending application for a permit" as UNE has not yet formally submitted an application for the pier. UNE alleges that the City's Harbormaster, Paul Laverriere, has made numerous statements evidencing bias against the UNE- which is a factual dispute. More importantly, UNE alleges that Harbormaster Laverriere has prejudged the potential pier application, and he has publicly stated that he is going to deny or refuse to issue a permit to UNE for a pier at Site #7. This allegation is not subject to dispute.

Chair of the Harbor Commission, John Schafer, sent email correspondence dated February 25, 2024, to the entire Harbor Commission, the Mayor, yourself and the entire City Council with "cc" to a variety of citizens. In that email, Chair Schafer states that a dispute exists between UNE and Biddeford over the design and location of the subject pier. Further that email contained the minutes of a February 21, 2024 Joint Harbor and Shellfish Meeting. The minutes state ***"..., Paul has denied approval of the UNE pier design."*** The correspondence also states that UNE is threatening possible litigation. It is important to note that any "litigation" brought by UNE would be an administrative, appellate review of its Constitutional rights and not any type of litigation seeking money damages from the City. UNE has every right to seek judicial review of any denial of a permit by a governmental entity and should not be penalized or impugned for asserting its Constitutional rights.

Additional complaints by UNE against the Harbormaster are that the Harbormaster has unilaterally and in an ex parte manner advocated to other regulatory bodies to deny the UNE permit for a pier at Site #7. It was entirely improper for the Harbor Commission and its Chair to discuss a potential application for a permit, without notice to the applicant. UNE also alleges that the Harbormaster has contacted the Army Corp of Engineers (which also must approve any final pier plan), indicating that his is or will deny the application and he has urged the ACOE to deny the permit. In my opinion, all of these actions constitute a violation of UNE's due process rights and expose the City to losing any judicial appeal of a denial of a permit for Site #7, irrespective of the potential merits of such denial.

LEGAL CONCLUSIONS & OPINIONS

I have reviewed the City Charter, Code and applicable case law. Based on that research, I have opinions and advice to the City regarding the potential application by UNE for a permit to construct a pier at Site #7.

The public emails which state that the Harbormaster has denied a permit that has not been formally submitted violate the applicant, UNE's due process rights. The due process clauses of the Maine and federal Constitutions guarantee due process before a government entity deprives

any person of a property right. *Kirkpatrick v. City of Bangor*, 1999 ME 73, ¶ 13, 728 A.2d 1268; *see also* U.S. Const. amend. XIV, § 1; Me. Const. art. I, § 6–A. The pier application is a constitutionally protected property right of UNE.

Persons who come before an administrative board are entitled to a fair and unbiased hearing. *Fitanides v. City of Saco*, 2015 ME 32, ¶ 22, 113 A.3d 1088; *Gorham v. Town of Cape Elizabeth*, 625 A.2d 898, 902 (Me. 1993). An administrative hearing officer "enjoys a presumption of honesty and integrity, which is only rebutted by a showing of some substantial countervailing reason to conclude that a decisionmaker is actually biased with respect to factual issues being adjudicated." *Mr. & Mrs. V. v. York Sch. Dist.*, 434 F.Supp.2d 5, 12–13 (D. Me. 2006).

Statements by the Harbormaster that UNE"s application is not "common sense", made outside of any noticed, formal proceeding are in violation of due process. Those statements would likely be found by a reviewing court to constitute bias. The Harbormaster acted unprofessionally when he told the ACOE to deny the UNE permit and by informing the ACOE that he had already denied the permit.

Comments by a municipal official at municipal proceedings without the applicant being notified nor present create a perception of bias, violate due process and raise questions about a municipality's willingness to consider the contentions of its citizens in a fair and responsible way. UNE has the right to protect its property interests, including its appeals to a neutral, unbiased Harbor Commission or Court. *See Fitanides v. City of Saco*, 2004 ME 32, ¶ 36, 843. Further evidence of bias is set forth in the Harbor Commission Chair's email which references UNE's potential threatened litigation. The exercise of appellate rights is absolutely proper and should not be raised at any level of review.

It is my opinion that the City of Biddeford should engage an independent Harbormaster to review and determine the UNE pier application. This insulates the City from the time and cost of a lengthy appeal of what has already been deemed a 'denial' by the current Harbormaster. Such 'denial' has been illicitly approved by the Harbor Commission. I do not believe I would successfully defend either a denial by the Harbormaster or a review by the current Harbor Commission.

Should there be an appeal from the independent Harbormaster's decision, it will need to be presented to a City of Biddeford appellate body, separate and distinct from the current Harbor Commission, for the reasons stated herein.

HARBORMASTER RIGHTS

The current Harbormaster is a governmental employee who has his own Constitutionally protected due process rights in his employment as Harbormaster. It is my opinion that none of those rights are impugned as there is no reduction in pay or benefits, nor is his position in any way diminished. The City Manager is making a decision based on legal advice, to proactively prevent lengthy and very costly appellate review of a pier application that has irrefutably been

the subject of numerous violations of procedural due process. It is my opinion that the current Harbormaster has no right to review the City's decision to have UNE's permit reviewed by an independent Harbormaster.

EXECUTIVE SUMMARY

- There is no factual issue that the City has tainted the pending pier application by UNE, based on the February 25, 2024, Harbor Commission Chair email and the February 21, 2024, Harbor Commission minutes. Evidence of bias, violations of due process and general unfairness are established in the record.

- The decision to have an independent Harbormaster determine the UNE pier permit application is solely within the discretion of the City Manager, based on opinions from the City Solicitor and the Harbormaster has no appellate rights or right to review that decision.

- Should UNE choose to appeal any decision by the independent Harbormaster, a new appellate body should be created as the current Harbor Commission has tainted its ability to independently review any decisions on the UNE pier application.

MEMORANDUM FROM CITY MANAGER TO CITY OFFICIALS EXPLAINING DUE PROCESS VIOLATION ISSUES

City of Biddeford, Maine

The Office of
City Manager
James A. Bennett
Email: jbennett@biddefordmaine.org

MEMORANDUM

TO:	**Honorable Mayor Grohman** **Honorable City Council** **Biddeford Harbor Commission** **University of New England**
FROM:	James A. Bennett, City Manager
DATE:	May 22, 2024
RE:	**Administrative Hearing Authority for Anticipated Girard Marine Science Center Pier**

After an extensive review of information and consultation with the City Attorney, I have informed the Harbormaster that I am removing him as the Administrative Hearing Authority for the anticipated application for the above mentioned project. Included within this memo is the rationale for my decision. I want to make it clear from the onset that I have not found the Harbormaster to have malice or intention in his actions. Further, my decision should not be considered disciplinary in nature.

It is my responsibility to ensure all appointed officials, employees and hired agents of the City perform to the highest of standards. In this matter, the process must protect the constitutional property rights of all, including the applicant. Further the applicants are entitled to a fair and unbiased hearing. Without taking this action, I have concluded that those standards would not be achieved.

The City Code directs the Harbormaster to facilitate and guide any applicant through the application process (Code 74-35(d)). Since the UNE has not formally submitted an actual application, the interactions between the applicant and the Harbormaster is governed by this section of the City Code. On the surface, this does not raise any concerns.

Examination of the actual activities of the Harbormaster once the applicant has indicated a difference of opinion on the preferred site raises the concerns. Examination of known factual information has led me to conclude that his actions were beyond the scope required by City Code 74-35(d). I further have concluded that an independent body would determine that the Harbormaster had moved into his role as the hearing authority prior to an application having been filed.

Without going into the complete analysis, I will share some of the factual information that has influenced my decision. In public settings, the Harbormaster has made it clear he would not consider UNE's preferred choice and would not grant a permit for that site. It is generally accepted that he has been informally in contact with other reviewing agencies advocating for his preferred site. At public meeting(s) he attended, it was reported by municipal officials that the Harbormaster had denied UNE's application. No application had been filed and he did not correct the public record. He has also participated in public discussions with the Harbor Commission (the actual appellant board for any aggrieved applicant before the Harbormaster) regarding the pending application and his rationale for his

decision. He has referred to UNE's 'application' as lacking 'common sense' publicly and outside of any noticed, formal hearing.

Recent Maine court decisions were helpful for my review. Having the public record misrepresent a denial of a permit even before an actual application, is a denial of the applicants due process rights. In *Kirkpatrick vs City of Bangor,* 1999, the court concluded that denying due process rights within both the U.S. and Maine Constitutions is equivalent to denying a property right.

Further, an administrative hearing officer (which the Harbormaster is when considering formal applications) "enjoys a presumption of honesty and integrity, which is only rebutted by showing of some substantial countervailing reason to conclude that a decision maker is actual biased with respect to factual issue being adjudicated" *Mr. & Mrs. V. vs York School District,* 2006. The undisputed facts above, in my opinion, has tarnished the presumption provided by the law.

In addition, I will be advising, with the assistance of the City Attorney, the Harbor Commission of the difficulty in them hearing any potential appeals on this matter. Specifically, comments by municipal officials at a municipal proceedings without the applicant being notified nor present create a perception of bias, violation of due process and raises questions about a municipality's willingness to consider the contentions of its citizens in a fair and responsible way. UNE has the right to protect its property interests, including its appeals to a neutral, unbiased Harbor Commission or Court (*Fitandies vs City of Saco, 2004).* The public discussions at meeting on the merits of the forthcoming application, email communications, and raising the concern of the pending litigation (the excise of an appellate rights is absolutely appropriate and should never be raised as an issue in a review process) has amounted to an illicitly approved denial by the Harbor Commission.

I have also notified the Assistant Harbormaster, by copy of this communication, that he, because of the close working relationship and the admitted role of training him, will not be able to be the administrative hearing officer in this matter.

I will soon announce the appointment of a special 'Harbormaster Pro Tem' for the sole purpose of hearing and deciding on the anticipated application.

CITY MANAGER
LETTER TO HARBORMASTER
GIVING NOTICE OF REMOVAL
FOR UNE PIER REVIEW

May 22, 2024

Mr. Paul Lariviere, Harbormaster
517 Pool Rd
Biddeford, Maine 04005

RE: Expected University of New England (UNE) New Pier Application

Dear Mr. Lariviere,

It is a reasonable assumption that UNE will formally submit their application for the so-called Girard Marine Science Center pier (SMSC Pier). This application will be submitted to you pursuant to Chapter 74-35(a)-(c) of the City Code.

In your official capacity as the Harbormaster, it is your responsibility to consider the application based on the merits of the submitted information. You must join other government officials in ensuring that constitutional property rights are protected, including those of the applicant. Further, you are entrusted to ensure applicants are entitled to a fair and unbiased hearing. As the City Manager, I am enjoined with the same responsibilities.

The City Code also directs the Harbormaster to facilitate and guide any applicant through the application process (Code 74-35(d)). I am aware that you have been playing this role with this proposed application since at least 1995, if not earlier. First as the Assistant Harbormaster and most recently, as the current Harbormaster.

The record is clear that UNE has a different opinion on the best location for the pier than the location your 'guidance and facilitation' has identified. Their preferred location, as I understand it, is based on the information they have received from technical experts they have hired to assist in siting and permitting the pier through various reviewing agencies.

Based on your public comments, you have been steadfast in your conclusion that the only location that is acceptable is the site that you directed UNE towards. These comments and other actions have raised the issue regarding your ability perform your duties objectively. It's my responsibility to evaluate whether you moved beyond the 'guidance and facilitation' role as contemplated by the Code and have essentially acted as the administrative hearing officer prior to the actual submittal of the application.

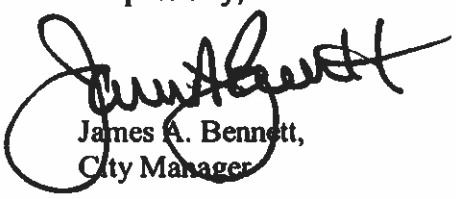
You have publicly stated there is no way that you would approve the site they are proposing on more than one occasion. It is generally understood that you have informally been in contract with other reviewing agencies to advocate support of your preferred site. There are public

meetings where it has been reported that you have denied the location that UNE desires; yet no such application has ever been made. You decided to let those comments stand even when lacking factual accuracy. You actively participated in public discussions with the Harbor Commission, the very appellant board to consider any appeals of the Harbormaster's decision, specific to your actions and rationale to date, without any notice to the applicant. Referring to UNE's 'application'[i] as lacking 'common sense' publicly and made outside of any noticed, formal proceeding.

Recent Maine Court decisions are helpful in my evaluation process. Having the public record misrepresent a denial of a permit even before an actual application has been submitted, is a denial of the applicants right to due process. In *Kirkpatrick vs City of Bangor,* 1999, the court concluded that denying the right to due process within both the U.S. and Maine Constitutions is equivalent to denying a property right.

Further, an administrative hearing officer (which you are when considering formal applications) "enjoys a presumption of honesty and integrity, which is only rebutted by showing of some substantial countervailing reason to conclude that a decision maker is actual biased with respect to factual issue being adjudicated" *Mr. & Mrs. V. vs York School District,* 2006. The undisputed facts above, in my opinion, have tarnished the presumption provided by the law.

It is my conclusion that allowing you to be the administrative hearing officer on the anticipated application would be a mistake. In my capacity as the City Manager, bound by the responsibility to ensure the application would be considered objectively, compels me to inform you that I will be removing you from any further action on this pending application. Further, you are directed to make no further comments in this regard, public or private.



I have also notified the Assistant Harbormaster, by copy of this communication, that he, because of the close working relationship and your admitted role of training him, that he will not be able to be the administrative hearing officer in this matter.

Finally, I will be advising, with the assistance of the City Attorney, the Harbor Commission of the difficulty with them hearing any potential appeals on this matter. Specifically, the fact that comments by municipal officials at a municipal proceeding without the applicant being notified nor present create a perception of bias, and that the violation of due process raises questions about a municipality's willingness to consider the contentions of its citizens in a fair and responsible way. UNE has the right to protect its property interests, including its appeals to a neutral, unbiased Harbor Commission or Court (*Fitandies vs City of Saco, 2004).* The public discussions at meetings on the merits of the forthcoming application, email communications, and raising the concern of the pending litigation (the excise of an appellate rights is absolutely appropriate and should never be raised as an issue in a review process) has amounted to an illicitly approved denial by the Harbor Commission.

I should make it clear, that I have not concluded that you have acted with malice nor that you have been intentional in your actions, but simply overstepped your facilitation and guidance role into actions that an independent body would consider inappropriate. Once this immediate issue is concluded, we can revisit my conclusion and decision.

I will soon announce the appointment of a special 'Harbormaster Pro Tem' for the sole purpose of hearing and deciding on the anticipated application.

Respectfully,

James A. Bennett,
City Manager

Re: Agreement for Professional Engineering – UNE Pier Project

Dear Mr. Bennett:

TEC Associates proposes to provide professional engineering services for the above referenced project for a fee of $2,800. Our scope of services for this project includes the following tasks:

1. Review an application by the University of New England to construct a pier on the Saco River in Biddeford and make a determination if the application contains the information required by Section 74-35 (c).

All work shall be in accordance with the attached *Statement of Terms and Conditions* and *Engineering Rate Schedule*. Thank you for asking us to assist you with this project.

Very truly yours,
TEC ASSOCIATES

Wayne Duffett, P.E.
President

Attention: Mr. Alan Thibeault, VP of University Operations

RE: Proposed Marine Science Center Pier

Dear Mr. Thibeault,

I write to you today to update you on the above submittal. I apologize for the delay in proceeding with the application. As the University is very aware, unusual circumstances created challenges in assuring that the application was reviewed in an unbiased process.

On behalf of the City and after consulting with the City Solicitor, I have determined that the role of the Harbormaster consistent with City Code 74-35 is primarily limited to two;

- …to grant permission for the pier; and
- …to determine if subsections (c) 1-10 have been complied with.

Further, it is also my determination that completion of subsection (c) 1-10 is a condition precedent prior to the ability of the Harbormaster granting permission or 'signing off' pursuant to section (d) of the ordinance. The City further may delegate the determination of completeness to a third party independent qualified engineering firm.

Therefore, I have engaged Wayne Duffett, PE of TEC Associates specifically to make the determination if your application meets the criteria found in City Code 74-75 Section (c) 1-10. Your application materials have been provided to Mr. Duffett for his review. Your cooperation during his review is requested.

Please feel free to reach out to me if you have any questions

Sincerely,

James A. Bennett
City Manager

Biddeford, Maine 04005

Attention: Mr. Alan Thibeault, VP of University Operations

RE: Notice to Proceed with External Reviews

Dear Mr. Thibeault,

On August 9, 2024, I received written clarification from Mr. Wayne Duffett, PE of TECAssociates that UNE's proposed Research Pier and Float System has complied with City Code 74-35 subsections (c) 1-10. Those sections are as follows:

(1) A formal boundary survey that has been documented at the Registry of Deeds.
(2) A copy of the boundary survey showing the littoral zone, established by extending property lines seaward.
(3) A location map from a portion of a USGS topographic map or coastal chart.
(4) Distance to navigable channels or any federal navigation project.
(5) Mean high- and low-water boundary.
(6) A plan view on the drawing(s) that shows the location and dimensions of the applicant's structure(s) in relation to the applicant's property lines.
(7) A typical cross section/side view of the applicant's structures on the drawing(s).
(8) Evidence that owners of abutting properties have been notified of the applicant's intended project.
(9) Evidence that the 1) Maine Historic Preservation Commission, 2) Aroostook Band of Micmac, 3) Passamaquoddy Tribe of Indians: Pleasant Point; Indian Township, 4) Houlton Band of Maliseet Indians, and 5) Penobscot Indian Nation have been notified of the applicant's intended project.
(10) Completed applications to the Army Corps of Engineers, Department of Environmental Protection and Biddeford Code Enforcement. A regulatory permit from the Saco River Corridor Commission may also be required in some instances.

Based on this information and in harmony with my earlier communications, please consider this as formal notification from the City of Biddeford that the application has been found in compliance with

the above mention City Code. That finding allows the application to proceed in the next steps of the review process; namely formal review by all agencies except those that are part of the City of Biddeford. After each and all of those processes are complete, the City will move forward with the final review(s) by agents and Committees of the City.

While I don't believe it is necessary, let me empathically state that this communication does not in any form, imply that the City has in any way made a determination that the location submitted has been approved. Said approval will considered after completion of all process and in compliance with applicable laws, regulations. This includes all local ordinances.

Please feel free to reach out to me if you have any questions

Sincerely,

James A. Bennett
City Manager

Mr. Herbert:

On May 27, 2025, you sent a broadcast email to the community asking that we contact you “with any questions” about UNE’s pier application. The mooring owners wrote to you in early July with one question. Consistent with how UNE treats this community, you did not reply.

Mooring owners have been told by city officials that there are no plans to relocate any moorings. Mooring owners informed UNE several times that they are not moving. That remains true. The place on the Saco River that you want for your new pier remains unavailable to you.

Alan Thibeault recently told a reporter that Biddeford now needs to “work with mooring owners to relocate the two impacted moorings.”

That won’t be happening. And so therefore the president of UNE is asked once again. When, against whom, and on what legal basis will you be filing litigation to bulldoze mooring owners out of the way?

Subject: UNE pier: two final questions

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Good morning, Mayor Grohman.

As you know, I resigned from the harbor commission just over a year ago, seeking more transparency in the regulatory review of UNE's proposed pier for the Saco River. At one point you invited me to your office to discuss the matter, along with the city attorney. Thank you for that opportunity.

The planning board will soon vote to grant final approval to UNE's application. The result of that impending decision is that *no* professional, who knows the river and works for the city, ever approved this application after personally getting onto the river to evaluate current, river depth, wind, extreme storms, tides, other moorings, and so forth. (Nor did any state or federal regulator.) That was a gaping hole in the Biddeford's regulatory process. You are probably aware that UNE neighbors and those who use the river, both in Biddeford and Saco, are now bitter and angry about the flawed regulatory process that *actively excluded* local knowledge of the river. They are especially upset about the former city manager's role in facilitating events that gifted UNE the upper hand. It's hard to believe that's the way things were allowed to happen, right to the very end. As you prophesied in the Saco Bay News a year ago, "At this point they (UNE) are holding all the cards."

I read in the Biddeford Gazette that you are running for re-election. Congratulations. Coincidentally, your first mayoral term ran almost concurrently with the UNE controversy from start to finish. A few days ago, in anticipation of final success before the planning board, Alan Thibeault told the Saco Bay News, "…the city will then need to work with mooring owners to relocate the two impacted moorings." I am winding down my personal involvement in this issue, but before I (eagerly) retire as a community organizer, I have two questions to ask on behalf of my friends and neighbors.

As Biddeford's top government leader, you have been privy to policy and strategy discussions during the last two years. As I understand the current situation the mayor has no power, we don't have a city manager, the former city manager obliterated the relevance of the harbormaster, the assistant harbormaster, and the harbor commission, and the mooring owners have made it clear that they're not going to move. UNE holds all the cards and wants to start construction this fall. Can you tell me (and the voters) what person now working for the city will boot the mooring owners from the spots on the river that they have lawfully held for many years? The second question is, what city authority will direct the city's agent to take that action, and give those mooring locations to UNE?

Thank you very much. I ask these two questions not only as the former chair of the now crippled and dormant harbor commission, but as a voter who proudly displayed a “Grohman For Mayor” sign on my lawn in the Fall of 2023. I look forward to your reply.

Sincerely,

John Schafer

Subject:	UNE pier: final submitted comments

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Dear Biddeford Planning Board:

I have written and sent this email to you on Wednesday, July 23, 2025. As of this morning, no future Planning Board meeting is scheduled on the city's website. Encouraged by Mr. Galbraith's articulation of his department's complete transparency at the last Planning Board meeting, I would like to respectfully make a request.

At the future Planning Board meeting during which UNE will seek final approval for its new pier, could Mr. Galbraith, the Chair, or a Member of the Board please read my remarks into the record, so that those watching at home can know that the Board is fully aware of this information before it votes. Thank you very much for the consideration. My testimony:

Preparation of litigation against the City of Biddeford, to be filed after the Planning Board grants final approval to the University of New England (UNE) for a new marine sciences research pier, is easily based on an undisputed set of facts.

It is the duty of each Member to fully review all information and testimony supplied to the Board. Therefore, all three Members of the Planning Board who voted to grant preliminary approval to UNE's application were aware of these facts on July 16, because they were available in emails and documents contained in the packets of information that were supplied to the Board, and in public testimony given to the Board.

On July 16, 2025, the three Members who voted in the affirmative knew each of the following to be true.

1. Mr. Patoine requested a copy of the application that UNE filed with NIST, and UNE refused to provide it.
2. Daryen Granata, Vice President & Training Coordinator for the Maine Harbor Masters Association, wrote to the city manager on June 4, 2024, "Section 74-35b of the Biddeford Harbor Ordinance states, 'permission for the construction of any new

wharf or pier within the jurisdictional limits of the City shall not be granted without approval of the Harbormaster.'"

3. In the same email, Mr. Granata wrote, "We recommend that you work within the review hierarchy laid out in your harbor ordinance."
4. In the same email Mr. Granata laid out the normal "chain of command" for municipal regulatory review of UNE's application: harbormaster, or assistant harbormaster, or finally, the harbor commission. None of these regulatory entities reviewed or approved UNE's application.
5. In the same email, Mr. Granata described the city manager's plan to circumvent normal regulatory review as "inconsistent with the prevailing law."
6. On July of 2025, Mr. Granata confirmed in writing that, "The Maine Harbor Masters Association has no record of Mr. Wayne Duffett attending Basic Harbor Master Training and Certification." In other words, the vendor that Jim Bennett hired while trying to circumvent Biddeford's municipal regulatory process, as outlined in Section 74-35b of the Biddeford Harbor Ordinance, is not a certified harbormaster in the State of Maine.
7. On June 11, 2025, Alan Thibeault of UNE confirmed in a letter to the city planner, "The Ordinance begins with Section 74-35(a), which states: "No additions, alterations, new construction or/or changes to an existing wharf, pier or landing shall be made without prior permission of the Harbormaster."
8. In the same memo, Mr. Thibeault cited language from Section 74-35(d) and wrote "…the Harbormaster shall…sign off that all regulatory approvals have been obtained for construction." Wayne Duffett is not a harbormaster in Biddeford, or anywhere. Paul Lariviere remains Biddeford's harbormaster. Mr. Lariviere has not "signed off" on any such document.
9. On June 25, 2024, Heather Stukas of the U.S. Army Corps of Engineers instructed her colleagues to "follow-up" to make sure the latest UNE location and design was acceptable to Biddeford's harbormaster, and that never happened.
10. In its application UNE argued strenuously that pier location was previously approved by virtue of a previous Board's approval of a Master Plan. UNE's argument was specious. Everyone knows approval of a conceptual Master Plan is not Planning Board approval of a specific application.
11. There can be no doubt about the previous fact. That's why the city manager wrote to UNE on August 19, 2024, "While I don't believe it is necessary, let me emphatically state that this communication does not in any form, imply that the City has in any way made a determination that the location submitted has been approved."
12. Finally, the three Board members voting to approve the application on July 16, 2025 knew that Biddeford's delegate to the Saco River Corridor Commission abstained from all discussion and voting on the application, leaving Biddeford residents completely unrepresented. The DEP Commissioner refused a request for a public hearing. No certified harbormaster reviewed or approved the application. UNE made sure the public was not invited to the site survey it conducted for the Bureau of Submerged Lands. Perhaps most maddening of all, the U.S. Army Corps of Engineers notified Biddeford residents that voluminous testimony and documentation that had been submitted to that agency was summarily discarded.

The items listed above are a set of facts, not opinions. Included in that set of facts is the conclusion by the Maine Harbor Masters Association that Biddeford's intentional deviation from its harbor ordinance was "inconsistent with the prevailing law." To use language that is more direct, it was illegal.

The Planning Board was specifically warned not to ***deny*** the application based on currents, tides, water depth, and so forth. That is understood and not in dispute. But the Planning Board also knows that no independent professional has looked at these things, either. Therefore, we all know when the Board grants final approval tonight, ***nobody*** who knows the river will have considered those critical factors. Through no fault of its own, the only information the Planning Board had was submitted by UNE's paid engineers, sitting behind computers.

The Code of Ethics guides the Board to "explicitly evaluate all facts, alternatives, means, and consequences relevant to its decisions." One of those facts is that the Planning Board ***knows*** that no professional who knows the river, working for the city, has ever approved this application ***after*** evaluating current, river depth, tides, other moorings, and so forth. Nor has any state or federal regulator. That is a gaping hole in the regulatory process. Any proof of such a critical examination of those physical realities, by a certified and experienced ***independent*** authority, is missing from the application. The Board is aware of this.

Nevertheless, the vote tonight won't be to table the application until that gaping hole is filled. It will be --- knowing what the Board knows --- to approve the application. That needs to be made clear to all parties concerned, especially the people of Biddeford. I appreciate you introducing this set of facts into the public record.

In conclusion, I thank each Planning Board Member for your public service, and I also thank all Saco & Biddeford residents who have been relaying their concerns to me since the beginning of 2024. Those who actually know the river have a lot of practical wisdom.

Respectfully,

John Schafer

River mariners challenge UNE president to reveal pier lawsuit

July 15, 2025

MEDIA CONTACT, MOORING OWNERS:

1. Capt. Shawn Tibbetts, captshawntibbets@gmail.com, 207-502-0368
2. Michael Ramunno, mramunno@maine.rr.com, 207-423-3650

(Biddeford, Maine) Because the spot on the Saco River that the University of New England (UNE) wants for a new pier is unavailable, to seize it the university will have to file a lawsuit to expel current mooring holders. Those who own the moorings want university president James Herbert to be transparent about the issue at a planning board meeting tomorrow night.

“We’re not moving, and we are certain the city will take no action to forcibly remove us from the moorings we’ve held for many years, in good standing and in good faith,” said Shawn Tibbetts, a commercial fisherman who owns a mooring on the river. “UNE has to stop tap dancing around this issue, and address it head on in front of the planning board.”

UNE wants to build a new marine sciences research pier on the lower Saco River, near where the river empties into the Atlantic Ocean. With the help of U.S. Senator Collins, UNE secured a $3.5 million grant from the National Institute of Standards and Technology (NIST), to help with construction. But the local mooring holders already occupy UNE’s preferred location, and have for years.

Herbert wrote a broadcast email to the coastal community on May 27 and promised to answer “any question” about UNE’s pier proposal. The mooring holders wrote to Herbert about ten days ago and asked, “when, against whom, and on what legal basis will you be filing litigation to bulldoze mooring owners out of the way?”

Biddeford’s harbormaster says he has no plans to move any current moorings. That’s why Tibbetts and his fellow mooring holders are adamant that UNE can’t have the location they want. If the university fails to detail a plan to forcibly remove moorings, then UNE’s planning board application is incomplete. Tibbetts said an incomplete application is likely to be denied, and UNE can’t dodge the issue any longer.

“It is improper procedure to expect the planning board to approve an application in a location that is off limits. UNE has no power to assign, remove, replace or commandeer moorings, and Mr. Herbert has been aware of this issue since May 14th. The university’s had more than eight weeks to come up with a plan, and they haven’t done it. They have to answer the question --- who are they going to sue?”

The Biddeford Planning Board meets tomorrow, Wednesday, July 16, at Biddeford City Hall. The meeting begins at 6:00 p.m.

Subject: A message to Ms. Plotkin & the Board

Good morning, Alexa.

With this message, I conclude my personal involvement trying to bring sunlight and open discussion to the UNE pier issue.

I want to apologize to you personally for losing my cool at the July 16 planning board meeting. I'm sure you could see that something got under my skin, but…no excuse. I put you in a tough spot, and I didn't mean for that to happen. Further, I cost myself the opportunity to support the astute observations of Members Angers and Lewis about the fundamental flaws in this particular regulatory review process. I apologize to both of them as well for being of little help on that particular evening.

At the end of my three minutes at the podium I had intended to make what I felt were some important and honest comments. Although I sharply disagree with the logic articulated that evening in favor of the application's approval, I would like to deliver my comments to you now. They still hold true. And they apply to the ***entire*** planning board, and certainly to you as Chair.

Your process was the most democratic thing I've seen in a long, time. That's democratic with a small "d." Right at the start we heard about your Code of Ethics. Everything was transparent, and

participation by local folks was amazing. Everyone who wanted to do so was allowed to supply information, and felt very welcomed to approach the podium. All planning board members were paying attention, and I strongly believe all members researched and deliberated with integrity.

In the democratic process with a small “d,” everyone gets to say their piece and then a decision is made. Although your decision did not go the way I had hoped, I certainly respect it. Because what you folks put together was an inclusive ***model exercise*** in local democracy. You were the ***only*** regulatory agency to welcome and seriously consider citizen input, and that is to your credit.

I wish you and each planning board member the best, and I hope you all enjoy what remains of this fabulous summer weather.

Sincerely,

John Schafer

Subject: Official request for "credible news" about UNE pier

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact the IT Department

Dear Mayor Grohman,

This is Day 7, and no answers. I'm astonished that your choice, as a declared candidate for office, was to just ignore the two questions I posed to you a week ago.

On May 5, 2025, the Biddeford Gazette published an article, "Mayor defends city review of UNE pier proposal." That review purposefully excluded the professional knowledge of local experts who know the river, and you aren't on the record anywhere as having argued that local knowledge of the Saco River should have been considered. You and your Administration successfully pulled the right levers leading to final approval for the pier, and I've got to tip my hat to you. You outmaneuvered local opposition to UNE's preferred location, and we were no match for you.

Of course, the only thing you can't do now is run away from your success. On behalf of the community members to whom I report, I repeat two questions to the man who wants to be re-elected to Biddeford's top leadership position.

1. What person now working for the city will boot the mooring owners from the spots on the river that they have lawfully held for many years?
2. What city authority will direct the city's agent to take that action, and hand over those mooring locations to UNE?

This is not some theoretical exercise. These are two legitimate and pressing questions that need to be answered now, because Alan Thibeault told the Saco Bay News that UNE wants to begin construction this fall. Your job is to sweep those mooring owners out of the way, and soon.

Hard to believe, but at the symposium on local news last night at McArthur Library you said, "I'm constantly looking for credible news. With so many different things online, it can be difficult to find credible news." This is your opportunity to relay credible news to your constituents. You have been asked two questions, and I look forward to passing on your answers to those who want to stay informed.

Sincerely,

John Schafer
Hills Beach, Biddeford, Maine

P.S. I have made sure to copy The Maine Monitor and the Saco Bay News to this email.

Subject: My statement at the council meeting on Tuesday night

Good Evening: My name is Roch Angers and I live at 26 Cathedral Oaks Drive in Biddeford.

Some of you may know me but others may not. I was a former city councilor & volunteered & appointed to the Planning Board by this present Mayor and this council. My term expires in 17 months. I want to make sure that you know that I am not representing the planning board but giving you my own opinion and only my opinion.

I would like to bring something up about the Pier project at UNE. This project I believe has some real hard questions to be answered and I believe it is tainted. UNE as far as I am concerned has not been transparent with the public and the mooring owners and have not been given the time of day during this whole process.

Why was UNE so quiet in its presentation to the Army Corp of engineering? Nobody got notified and found out later that no public comment was to be allowed. Why were they not up front about the DEP presentation and letting people know they were going to present their plans about the Pier? Saco River Corridor had their meeting and lo and behold the members from the City of Biddeford and the alternate were not present to vote on this matter. Something fishy!!!! Don't you think?

The Coce of ordinances States in Chapet 74 Waterways Article 2 Harbor Division 2. Harbor-master Section 74-51 Criteria.

The Criteria for the Harbormaster is as follows

1. **Must be a voting resident of five years**
2. **Must have at least five years of marine experience with a minimum of two years on the ocean**
3. **Must attend annual Maine Harbormasters Association training seminar.**

The Harbormaster in the city website is Mr. Lariviere. He was removed by the City manager on the pier Issue as he was told that he was biased on the UNE project and that someone else would make the decision in his place.

Well lo and behold the City manager at the time appointed a railroad engineer in his place to become the facilitator of this project. This person does not met the criteria of the code of Ordinance for the city of Biddeford Chapter 74 Article 2, Harbor Division 2 Harbormaster Waterways or State of Maine MRS Title 38 Chapter 10 operations of Vessels of the State of Maine. I was told by our City Solicitor Harry Center that the railroad engineer was not a voting resident of five years, and he did not have five years of Marine experience with a minimum of two years on the ocean and never attended Annual Maine Harbormaster

Association training seminar. I was told this 2 weeks ago at the planning Board meetings and documented in the minutes of the meeting. These are the Biddeford codes of ordinances & Maine State Title 38 Subsection 2 that you as council members must follow and the planning board should follow also. These statutes from Maine and the ordinances are not written on a whim!! They were written for a purpose to follow the law. We are supposed to follow those LAWS.

Tomorrow night at the planning board meting I am going to try to table this vote on the UNE Pier. My reasoning is this as I think that the council should be making this decision as a whole as you are the representative of the cit and you are the ones who makes policy decisions and make sure laws are abided to. I am not trying to tell you what to do but asking that if and maybe if this passes at the Planning Board that you take a hard look at this Pier project and ask yourself if everything is on the up and up. I cannot understand why you as council members were never informed about this project. It should have started with you as a council and not just the Mayor. Thank you for letting me speak in front of you tonight with my concerns. Speaking as a taxpayer of the City of Biddeford.

Thanks for your time

Roch A Angers

I am submitting the following for the 8/6 planning board meeting regarding the UNE project.

I have spoken regarding the UNE project 3 times and have yet to receive a single answer to any of my questions. I am again requesting the Board, who are the final decision makers to answer these questions related to Biddeford's Shore land zoning ordinance:

Section 1. Purposes. [Ord. of 9-15-1998(4)]

The purposes of this ordinance are to:

to protect fish spawning grounds, aquatic life, bird and other wildlife habitat;

to protect commercial fishing and maritime industries; This project does not help me as a Maine guide or any of the working fisher people. It will negatively impact us.

to conserve shore cover, and visual as well as actual points of access to inland and coastal waters; to conserve natural beauty and open space; We all use this area to access the river, the beach and the fish. **How does this project conserve natural beauty and open space?**

SZO sec 15 part C The facility shall be no larger in dimension than necessary to carry on the activity and be consistent with the surrounding character and uses of the area

The site walk was helpful to appreciate the size and scale of this project. Speaking of scale, this site walk confirmed that the numerous regulatory requirements make this so massive it is no longer meet Sec 15c. **What is the next largest privately owned dock comparable in size that supports this requirement under the ordnance? ON what basis does the UNE project meet this standard?**

Sec 15 sec 10a When necessary, the removal of trees and other vegetation to allow for construction equipment access to the stabilization site via land must be limited to no more than 12 feet in width. When the stabilization project is complete, the construction equipment accessway must be restored.

The entrance will be a 20' road (not `12 per the law), combined with the turn around and the building as a backdrop will rip open the vegetation to a massive scale. Fire department requirements conflict with an ordinance, the ordinance-the law- still stands. **How is the project in compliance with this requirement? How is the city reconciling the SRCC approval of a 16' road, vs the 20' road being proposed?**
