

The City has hired Dow & Coulombe, Inc. to perform a boundary survey to locate the limits of the City's 49.5' right-of-way along Lester B. Orcutt Blvd between Ocean Avenue and First Street. Residents may see survey crews working along the roadway during the last two weeks of March 2026. The results of the survey will be provided to the City Council in April for review.

Once the survey is complete, the City plans to maintain its right-of-way on this street. This may require the removal of shrubs, plants, or other landscaping elements that are currently located within City property. Ensuring that the City's right-of-way is cleared, identified and maintained moving forward will help improve pedestrian safety and parking conditions in this area.

There will be an online informational session about this project on Wednesday, March 4, 2026 at 6:00 PM. Information on how to access this meeting can be found below.
